Tow-Behind Broadcast Spreaders

Agri-Fab SnowEx

These spreaders feature enclosed gears, powder-coated steel tube frames, and pneumatic tires that roll easily over most terrain. No. 24W836 features ground drive, adjustable steel spinner, and easy clevis mounting. No. 5NTR1 has powder-coated axle, sealed bearings, 12VDC electric gate, high-output auger feed, and fits a pin hitch.

Mounted Broadcast Spreaders

Fimco TurfEx

Rear-mounted spreaders with corrosion-resistant poly hoppers use 12VDC variable-speed motors to adjust the spread width area. No. 8XTT1 includes On/Off drop switch, mounting brackets, and hardware. Power train-operated spreader No. 5NTR0 has a 3-pt. hitch and manually adjustable flow rate. Rear-mounted spreader No. 5NTP9 has a powder-coated steel frame, 2" receiver hitch, and hopper cover. Features electric-controlled flow gate and calibrated drop.

Shovel and Handle Types

SHOVEL TYPES

Round and Square
Used for digging and moving materials. These shovels usually have a long, straight handle; giving you more leverage when digging. The larger blade size comes with a pointed or rounded tip and is ideally used for digging, moving, breaking, and turning soil applications.

Scoop
Primarily used for moving grain material. Feature deeper basin that helps prevent spillage and has a deep enough edge to help snow removal.

Spade
Used for removing material and creating trenches of different shapes. Spades usually have a small, straight, flat blade and a shorter shaft. They are primarily used for slicing, lifting, moving, edging, and loosening soil and roots.

Trench
Similar to spades and are used to dig narrow trenches.

HANDLE TYPES
Come in straight or D-shapes and are made from wood, fiberglass, steel, and aluminum.

Mattocks and Picks

Hand tools with dual-function heads are excellent for breaking up rocky or hard surfaces such as concrete and packed earth. No. 22F045 has ductile iron head; others have steel head.

Cutter Mattocks—Have a hoe on 1 end and a cutter blade on the other, to cut and dig roots and cultivate soil.

Pick Mattocks—Broad mattock blades break up hardened soil; particularly good for burrowing, trenching, and hoeing. Pick points penetrate soil.

Railroad Picks—Designed to break up hard, rocky soil and similar materials. Each has chisel point on 1 end. Nos. 1THA8 and 4GFF2 have a pick point on the other, No. 20C884 has a ¾" point on the other. No. 4GFF2 is nonconductive.

Wheelbarrows and Accessories

Knobby tires provide deep traction for maximum contact. Ribbed tires provide positive steering on hard-packed surfaces.

Steel Tray Wheelbarrows—Drawn trays are pressed from heavy-gauge steel. 4" large curl, ball bearing wheels, and durable chip-resistant finish for added strength. Include cross supports, leg brace, and fully balanced to help prevent accidental tipping and spillage. Models with solid polyurethane tires can run over sharp metal, glass, and even nails.

Poly Tray Wheelbarrows—Seamless polyethylene trays are durable, easy to clean, and corrosionproof. All-steel front tray braces, cross strips, and "H" braces provide extra strength. Steel leg stabilizers help make them tip resistant.

ACCESSORIES

Solid Wheelbarrow Tires—Eliminate changing flat tires. Universal fit 6" ball bearing hub will fit any wheelbarrow.

Slime® Smart Tubes—Prefilled with a precise volume of sealant to seek out and seal punctures. Prevent flats up to ⅛".

Spot, Trailer, ATV, and Skid Sprayers

Sprayers are large enough to apply insecticides and herbicides to lawns, acreages, fence rows, and ditches. Fimco sprayers are made of corrosion-resistant poly and include a full-length drain sump and handgun nozzle. Chapin® sprayers feature chemical-resistant tanks. Nos. 416P35 to 416P37 include a triple filtration system that helps extend life of sprayer. No. 4NED5 is equipped with a pump kit that fits most roller pumps. Use with No. 3YB55, 6-roller pump, sold on page 2693.

BERNZOMATIC · FLAME ENGINEERING INC. · SIEVERT · LINCOLN ELECTRIC · GA GRAINGER APPROVED

Propane Weed Burner Torches

Easy-to-use method for controlling weeds. Ideal for use around rocks, pavers, driveways, and along fences. Can be used to melt snow and ice on driveways, sidewalks, and steps.

Hand Torches and Torch Kits—Ideal for spot weeding and pin-point flaming where a full continuous flame is not needed. Require a standard vapor withdrawal cylinder.

Shop Torch Kit—Ideal for small jobs where a large torch is too powerful or difficult to use.

Backpack Torch Kit—Excellent for spot weeding or where a continuous full flame is not required. Suitable for forest service use, farm, garden, and municipalities.

WESTWARD · DeWitt DOWN TO EARTH PROTECTION

Landscape Fabric, Plant Protection, and Weed Barrier

Anchor Pins—11-ga. steel pins can also be used on drip irrigation tubing.

Landscape Fabric and Weed Barrier—Tear-resistant Landscape Fabric helps control weed growth, and is striped every 12" to aid with plant alignment. Weed Barrier blocks weeds and conserves moisture, while allowing air, water, and nutrients to reach plants.

Plant Protection—Lets through air and moisture, while helping protect plants and flowers from freezing temperatures.

GA GRAINGER APPROVED · DeWitt DOWN TO EARTH PROTECTION

Tree Grates and Mats

Increase survivability and improve growth in tree and shrub plantings.

All black plastic Tree Grates are lightweight and easy to install. Center opening can be expanded with standard saw blade.

Tree Mats conserve moisture and stop weed growth without chemicals and eliminate the need for mulch or rock cover. Black color.

ECHO Makita

Gas-Powered Chain Saws

- Antivibration handles
- Bar/chain and oil
- 2-cycle

For chain saw chaps, see page 1721. See Grainger.com® for chain saws, bars, chains, sharpeners, and oil.

ECHO®—Feature digital ignition system, purge bulb, integrated choke, and side access chain tensioner. Models with Performance Cutting System™ have upgraded bar and chain for better cutting.

Makita®—Features large metal spike bar and toolless chain tension adjustment.

Pruners

Titanium Bonded® Nonstick and Titanium Nitride coatings improve blade strength and help blades stay sharper longer; Titanium Bonded® and Nonstick coatings also improve corrosion resistance. Stainless steel blades are inherently corrosion resistant.

Bypass and Anvil—Bypass models have curved blades to allow clean cutting, and can cut near the trunk without crushing plant tissue. No. 468F45 FATMAX® has a grip hook for maximum cutting power on large limbs. Features ergonomic nonslip rubber grips for comfort and curved handles to increase leverage. TiCN-coated blades will cut through 1" of live growth with minimal effort. Anvil pruners are excellent for cutting woody stems or deadwood.

Flower and Trimming—Flower pruners have pointed blades that can easily maneuver the tight spaces between flower stems. Trimming models are specially designed for harvesting fruit and pruning flowers.

2-Pc. Cutter Sets—Include bypass pruner and flower pruner.

Loppers

Bypass design is ideal for cutting green, living growth; anvil blade design cuts dry, dead growth.

Bypass—Longer handles with force-multiplying mechanism. Titanium carbo-nitride (TiCN) coating on Nos. 468F46, 425R87, and 425R86 allow blades to retain sharpness. SyncDrive® technology adds more cutting force than nongeared loppers.

Compound Lever Bypass—Lever mechanism helps reduce cutting effort.

Antimicrobial Bypass—Titanium blades resist corrosion and adhesives. Stainless steel is 3 times harder than untreated stainless. Blades stay sharper longer. Telescopic Lopper No. 429U21 extends from 19" to 24".

Anvil Loppers—Have nonslip grips and telescopic aluminum handles. Gear mechanism on No. 2RDN2 helps reduce cutting effort.

PowerGear® Lopper—Geared lopper gives you up to 3 times more leverage than traditional loppers. Low-friction, rust-resistant coating prevents sap and debris buildup on blade. Ergonomic handles.

Hedge and Garden Shears

HEDGE SHEARS

3-Pt. Compound Cutting Action—Increases leverage. Bumper pads protect hands.

Dial-a-Cut—Wavy-blade shears cut easily. Adjustment knob for harder or softer cuts.

Power-Lever®—Self-sharpening, serrated blade. Handle adjusts from 25" to 33"L.

Power-Gear®—Have 2 gears to aid cutting force, reduce cutting effort, and provide leverage through the cut.

Antimicrobial Handles—Titanium Bonded® shears are harder than untreated stainless, so blades stay sharper longer.

Heat-Treated Blades—Straight edge with limb notch shears feature comfortable nonslip grip. Blades can be resharpened.

GARDEN SHEARS

Titanium Bonded® resist corrosion and adhesives. Nonstick Titanium No. 429U32 resists tape, glue, hook-and-loop, and sap. Micro ceramic coating will not wear off—up to 100,000 cuts.

SHARPENER

Sharpens straight edge tools, such as hedge shears, anvil loppers, and pruners.

Hand Saws

Bow Saws—Westward® saws have a lightweight tubular steel frame with safety tension lever. Stanley® FATMAX® Bow Saw has a high-tension control knob, durable knuckle guard, and comfort molded grip. 24" removable blade.

Pruning Hand Saws—Blades fold or slide out of the way. Triple-edge teeth cut quickly. Titanium Bonded® blades on Nos. 429U25 and 429U26 resist corrosion and adhesives and stainless steel is 3 times harder than untreated stainless.

Tri-Cut Saws—Hard chrome-plated tri-edge blades provide a cleaner cut than a single blade. Impulse-hardened teeth. An index finger stop provides additional safety.

FISKARS® NUPLA® COUNCIL TOOL

Brush Clearing Tools

Brush Axe has a thick, drop-forged blade and nonstick coating. Insert-molded design prevents blade from loosening. Machete Axe body slices grass and vines while the hook is used for power chopping grass and palms. The head can be used for quick, controlled chopping. The end of the axe is used for push cutting and chiseling. Double-Edge Bush Hook is for clearing brush, weeds, tough vines, and undergrowth. Carbon steel blade has both edges sharpened. Clearing Hook allows controlled cutting for medium brush, woody stems, small branches, and hard fibrous plants. The hook/tip provides heavy-duty pulling motion for removing suckers, clearing vines. Coarse saw edge for precision cutting. Use Ditch Bank Blade for clearing undergrowth. Carbon steel blade has both edges sharpened. Clearing Hatchet works on light/medium branches. Hook is for light-duty pull cutting.

FISKARS® WESTWARD® GERBER

Machetes and Hawkbill Knife

Fiskars® Machete No. 45HE08 is for grass, soft fibrous plants, light brush, perennials, and small roots. The hook/tip is for dividing plants, clump cutting (pulling motion), and digging small roots and weeds. Serration for precision cutting of grass. No. 45HE11 is for large dense areas of lighter weight material. Blade tip chops grass, palms, and branches. Westward® models have a steel blade with a powder-coated paint finish, resistant to rust and abrasion. Hawkbill Knife has carbon steel blade and ergonomic plastic handle.

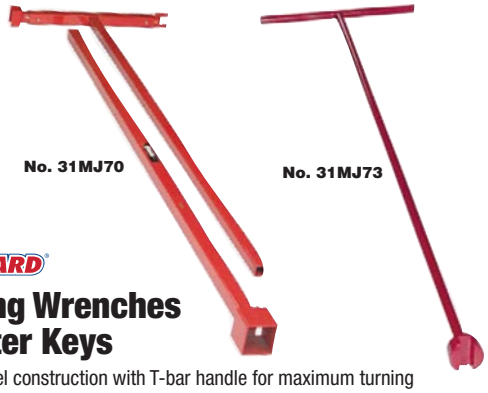
KUSHLAN PRODUCTS, LLC

Plate Compactors and Tamping Ram

PLATE COMPACTORS

Heavy-duty shock mounting helps reduce vibration to upper engine handle. Sealed belt cover helps keep out sand and soil, and open plate is self-cleaning.



Single Direction—Plate compactor has water tank, sprayer, and collapsible handle. High-powered engine with low fuel consumption. Fluid tank and dolly wheels are removable for easier movement.

Reversible Plate—Forward and reverse gears allow greater mobility in trench work. Heavy-gauge cast-steel base plate resists wear. Centrally located lifting bar and dolly wheels ease transport. Wraparound cage helps protect plate from damage. Use to compact asphalt, gravel, and mixed materials.

TAMPING RAM

Features heavy-duty roll cage and heavy-duty throttle cable. Includes removable dolly wheels for easier mobility. Utilizes lean carburetor settings and additional measures to reduce the emissions of carbon monoxide, oxides of nitrogen and hydrocarbons which are produced in the combustion process.

Hardware Cloth, Netting, Wire, and Barbless Cable

- Galvanized steel construction

HARDWARE CLOTH AND POULTRY NETTING

Hardware Cloth—Welded cloth has a double zinc coating for maximum rust resistance and long life. Can be used as tree guards, window covers, on screen doors, gutters, and more.

Poultry Netting—A lightweight containment solution for many maintenance projects. For use in plant protection, animal cages, as a soil erosion inhibitor, and more.

WIRE AND BARBLESS CABLE

Electric Fence Wire—2 wire gauges in different lengths work with most farm voltages.

Smooth Wire—Durable, single-strand wire with rust-resistant finish is ideal for bundling, hanging, and tying.

Barbed Wire—Can be installed in line or as loose coil. Ideal for agriculture, animal boundary, military and prison protection, and security applications.

Barbless Cable—Economical way to control livestock without the entanglement dangers of a barbed wire fence.

Barrier Fencing

Tenax® Snow Fence No. 9KDE5 is a UV stabilized fence with oval mesh openings designed to slow wind and create drifts for snow storage so they will not interfere with roadways, driveways, or runways. Strong HDPE plastic resists wind damage and remains flexible in freezing temperatures. Tenax Safety Fence features smooth top and bottom borders that are less likely to cut and scrape adjacent materials during installation and removal. Fences are reusable, lightweight sets providing boundaries around work zones, construction sites, sporting events, and blowing sand, silt, or snow. Also effective for crowd control.

Chain-Link Fencing

A. Fabric—Galvanized zinc is uniformly applied to steel wire before weaving for an even, protective coating that is free of sharp burrs. Smooth fabric is easy to work with during installation.

B. Top Rails—Pregalvanized sheet steel is formed into tubing.

C. and D. Terminal and Line Fence Posts—Galvanized steel terminal posts are used at the ends of a run as corner posts or as gate posts. Line posts are used as support posts in the middle of a run.

E. Gates—Steel is galvanized before weaving. Welded frame with 17-ga., 1⅜" tubing, and 9-ga. fabric fill, which is galvanized before weaving into 2" mesh.

F. to Z. Fence and Gate Hardware—Extensive assortment of aluminum and galvanized fittings are manufactured to rigid quality standards.

DeWitt DOWN TO EARTH PROTECTION TENAX Solutions All Around You.

Erosion Control Blankets and Silt Fences

These soil-preserving products control erosion and sediment.

EROSION CONTROL BLANKETS AND STAPLES

Biodegradable blankets contain at least 80% aspen wood fiber. Topped with a photodegradable netting. Green color. Biodegradable anchor staples sold separately.

SILT FENCE WITH WOOD STAKES

Lightweight woven fabric lets fluids pass through while trapping soil, preventing soil loss. Fencing is preattached to posts for easy installation.

Sprinklers

Whirling Sprinklers—Innovative shape control allows easy customizing of the sprinklers to the coverage area. On/Off switch allows you to adjust water flow at the sprinkler, not the faucet.

Impulse Spike Sprinkler—Shape adjustment is as simple as moving the collars to mirror the shape of the desired coverage area. On/Off switch eliminates trips from sprinkler to spigot, without getting soaked.

Oscillating Sprinklers—Plastic No. 425Y08 and metal No. 425Y09 are fully adjustable oscillating sprinklers with width and length controls. No. 425Y09 features On/Off control.

Traveling Sprinkler—Travels up to 200 ft. Adjustable arms and automatic shut-off. Die-cast iron body.

Tripod Telescoping Sprinkler—Far-reaching spray for large coverage areas. Metal stand and spiked feet provide durability and maximum stability.

Tree Watering Bags

treegator Slow release watering bags for trees & shrubs

Slow-release water bags provide an efficient means of properly watering newly planted trees or shrubs and promoting deep root growth. No. 8UNT8 is for use on a level surface for proper drainage. Low-profile design is for use on low-brushed bushes and trees such as pines. No. 9W936 can be used with chemical and nutrient additives and can be zipped together for larger applications.

Description	Color	Drain Time	Max. Tree Dia.	Item No.

Pivoting Nozzle Pole

A slide grip pivots the nozzle up to 135° to reach spray into tight spaces and awkward angles. Attaches to your existing garden hose for longer reach and spray patterns from fine mist to high power, 2.5 to 5 gpm. The adjustable nozzle has a rubberized tip to protect surfaces. It can be exchanged with any standard garden hose accessory to use the pole's pivot action and reach. The hose interface spins freely to prevent kinks. Features water/soap mixture control and easy switch to clean water only for rinsing.

Cold Water Hoses

- Premium-Duty: 6 ply
- Heavy-Duty: 5 ply
- Standard-Duty: 4 ply
- Light-Duty: 2 and 3 ply
- Super Light-Duty: 1 ply

All have GHT connections. Hoses with aluminum couplings are certified for use in potable water applications. PVC Premium- and Heavy-Duty Hoses are kink-resistant and have crushproof couplings. Standard-Duty polypropylene hoses feature a helix wrap, providing flexibility. They resist abrasion, crushing, and kinks. Polypropylene material is up to 35% lighter than standard hoses. Collapsible Hose No. 423J02 is a fabric hose. Super Light-Duty Soaker Hose No. 423H99 can be used above ground or buried for direct underground soaking.

Mouse Traps

GRAINGER APPROVED

MULTIPLE-CATCH MOUSE TRAPS

Triangle Corner—Easy-to-set galvanized steel traps are designed to save floor space and capture live mice. Clear lid on No. 32J095 makes it easy to check contents.

Speedy Clean® Little Pete®—Ramp unit comes out quickly and easily for cleaning, or to use trap for insects. Pop-down tabs raise unit in damp areas. Clear lid allows quick visual inspection.

Repeating—Catches multiple mice with 1 setting; mechanism sweeps mice into holding chamber. No poisons or bait needed. Safe to use around children, pets, and in FDA/USDA-inspected plants.

Pro-Ketch® Low-Profile and Ketch-All®—Galvanized steel traps use no chemicals, baits, or poisons; approved for use in USDA/FDA-inspected facilities. Low-profile No. 1VJR6 is designed for confined spaces.

SPRING-LOADED MOUSE TRAPS

Jawz™—Plastic-based trap with bait well. Easy to set; reusable.

Little Bigfoot®—Wood-based trap with heavy-duty spring and expanded adjustable trigger for greater sensitivity.

Plastic Snap-E®—A preformed bait cup aids in baiting, reduces bait stealing, and attracts mice to the ideal strike bar location.

Heavy-Duty—Reusable trap squeezes to set. Includes bait cup. For disposal, squeeze again to open.

GLUE MOUSE TRAPS

Stick-All®—Prebaited to attract mice and insects without poisons or dangerous chemicals. Keeps them out of sight.

Cold Temperature—Nontoxic glue is formulated to be effective in temps. as low as 0°F. Excellent for use in unheated garages, basements, and in commercial walk-in refrigerators.

Baited—No. 5DKE9 is prescored to fold for trapping and disposal. No. 5YAY1 nontoxic glue trays are prebaited with food-grade attractant. No. 11L633 adhesive traps also serve to monitor for insects.

Baited Mouse and Insect Boards—Nontoxic traps will not harden for 1 yr. under normal conditions. Perforated to tear off and place glue directly against baseboards to secure traps. Fold into tunnel shape for use in tight or dusty areas.

Pro Series Slim™ Multi-Catch —Narrow design can be placed in hard-to-reach areas where rodents travel. Use alone as a live trap, or add glue board No. 20YR50 (sold separately) to trap multiple mice.

Bulk Glue—Nontoxic glue is approved for use where pesticide use is prohibited or undesirable. Spreads easily in lower temperatures.

Mouse and Rat Bait Stations and Rodenticides

Bait Stations—Stations provide a place where rodents feel secure while feeding on poisonous bait. Tamper-resistant designs keep bait out of reach of livestock, children, pets, and nontarget animals. Stations do not require the cleanup of traps and can help monitor rodent activity.

Rodenticides—Pellets are for burrow baiting, while bait packs help protect bait and fit in tight spaces. Block baits are for all-weather use and resist mold and moisture. Brodifacoum formula is for single-feed use. Bromadiolone is a single-feed bait for everyday control of recurring rodent problems. Bromethalin acts quickly and is highly palatable to rodents. Diphacinone formula is an economical bait for day-to-day control of recurring rodent problems.

Animal Traps and Repellents

Mole Traps—Trap moles at the entrances and exits of surface tunnels.

Animal Traps—Easy to bait, set, and release. Smooth inside edges do not harm animals. Effective for a wide variety of animals.

Repellex®—Repellents are made from plant-based materials and have no harmful chemicals or pesticides. Not for use on food crops. Innovative emulsifying agents allow formula to absorb quickly into the soil and form a protective coating around plant roots and other underground food sources.

Transonic Mole—Nontoxic solution to most outdoor rodent problems. Stake into ground, where solar-powered unit flashes, buzzes, and vibrates, to disorient and repel moles and gophers.

Rat-Out Gel—Nontoxic gel repels rats, mice, squirrels, gophers, and other mammals. The garlic smell deters rodents before they even touch it, but if they do come into contact with the gel, its tacky quality turns them away.

Wildlife Repellents

Systemic Repellents—Deliver hot pepper concentrate through the plant roots making plants inedible to animals. Maintain potency while evenly distributed throughout the plant. One treatment can last the entire growing season. Not for use on food crops.

Granular Repellents—Organic, all-natural formula is safe to use around children, pets, and food crops. Granules will not wash away in the rain, evaporate, or freeze. Easy to apply by shaking on the ground.

Electronic Repellents—Use No. 6WB54 indoors. Sonic and ultrasonic sounds repel insects, rodents, bats, and spiders. Used outdoors, No. 1DGX2 is a humane, maintenance-free ultrasonic yard protector for deer, raccoons, rabbits, squirrels, skunk, rodents, and more. Continuous or motion-sensor operation.

Visual Bird Repellers

2D AND 3D DECOYS
Stake decoys into the ground to repel geese. 3D bodies swivel on stake and furry tail moves in the wind.

TERROR-EYES
Inflatable, moving bird predator uses holographic, moving eye lenses that follow infesting birds.

SCARE EYES
Inflatable repellent simulates glaring eyes of predator birds. Rotate colors within 3 weeks for max. effectiveness.

SCREECH OWL
No. 20YR37 features 4 predator/scare sounds, which are photocell-activated during daylight hours.

GATOR GUARD
Floating alligator head repels geese and small animals from water areas.

IRRI-TAPE
Iridescent diffraction foil ribbon combines holography, wind, and light to create a ripple effect that pest birds perceive as a danger signal.

FLOATING SWAN
Repels Canada geese. Effective on water or land; 2 steel anchoring stakes included. For best results, relocate the decoy periodically.

FALCON DECOY
Covers up to 6,000 sq. ft. Scares small pests and birds such as pigeons and gulls. Place on flat surface. Bottom has a plug that can be removed to fill with sand to weigh down base.

OPTICAL GEL™
Keeps birds off of structures without harming them. Supplied in ready-to-use plastic dish container which can be affixed to surfaces with commercially available dab of silicone. Birds see ultraviolet light spectrum as fire and avoid site. Gel has firm density that won't rut. Resistant to high and low temperatures, rain, and snow.

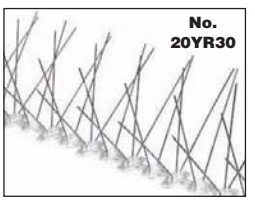
BIRD-X

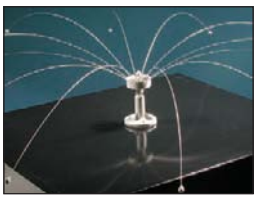
Bird Repellent Nets, Spikes, Gel, and Spray

Bird Nets and Clips—Seal off all structural openings to keep out birds and small animals.



Spikes™ Needle Strips, Kits, and Adhesive—Attach to any surface to permanently prevent birds from landing and roosting. Install with adhesive, sold separately.

Birdproof Gel—Nontoxic formula deters all birds and helps prevent landing and roosting by creating a sticky surface. Apply with a caulking gun, indoors or out. Solvent removal. EPA Registered.



Repellent Spray—Goose repellant can be sprayed with agricultural or hand sprayer on turf, fruits, vegetables, fountains (without fish), pools, and building structures. Not harmful to plants or animals.

Bird Deterrents

Products are designed to avoid injury to humans, birds, or animals.

StealthNet®—Ultrastrong, UV-resistant polyethylene netting provides an impenetrable barrier against sparrows, swallows, and other small birds. Black color. Custom sizes are available; call 1-800-GRAINGER (472-4643).

Bird-Flite®—Thin stainless steel rods on a polycarbonate base repel pigeons and larger birds from signs, chimneys, security cameras, cut-outs, lights, pipes, and ledges. Glue or screw in place.

Dura-Spike®—Blunt stainless steel spikes discourage pigeons and larger birds from landing and nesting. Flexible construction conforms to building features, such as ledges, parapets, pipes, chimneys, lights, etc. Cut to length and glue or screw in place.

Bird Coil®—Expanding coils destabilize surfaces and discourage birds from landing. Kits include clips, end brackets, and other hardware or adhesive to attach to your specific substrate.

Daddi Long Legs®—Device's stainless steel rods rotate and wave in the breeze, interfering with birds' wings as they try to land. Effective against gulls, pigeons, and larger birds. Plastic base screws into most surfaces.

BIRD-X

Silent and Audible Bird Repellers

ULTRASONIC BIRD REPELLERS

Balcony Guard—Keeps birds away with continuous or motion-sensor operation. Weatherproof. 120V power or 4 C batteries (not included). Includes mounting kit.

Ultrason X—Ultrasonic sounds get rid of birds, bats, rodents, and more. Weatherproof. For indoor or outdoor use.

Quad Blaster—Ultrasonic sound waves attack birds and bats in any enclosed or semi-enclosed areas. For indoor use only. No. 3NZD2 includes red strobe light that acts as visual deterrent.

SONIC BIRD REPELLERS

Broadband PRO—Controls bird pests with ultrasonic and sonic signals. Has a series of species-specific distress cries and predators' noise. Includes 3 visual predators: Scare Eyes, Prowler Owl, and Irri-Tape. For indoor or outdoor use.

BirdXPeller® Pro and Pro 2—Bird distress sounds and predator noises are effective against targeted species. No. 6WB52 repels pigeons, starlings, sparrows, and gulls. No. 8DML0 repels grackles, blackbirds, crows, cormorants, and ravens.

Super BirdXPeller® Pro and Pro 2—Use birds' own distress calls to scare them away. Include control unit, 4 speakers, and 100-ft. of speaker wire. For outdoor use. No. 1DGW7 is effective against pigeons, starlings, sparrows, and gulls. No. 5PTU5 is effective against grackles, blackbirds, crows, cormorants, and ravens.

Electronic GooseBuster PRO Single Speaker System—Sonic goose repellent system developed through decades of research uses authentic goose alert and alarm calls recorded in the wild. Audio makes areas uninhabitable for geese. Behavior modification teaches them not to return.

CATCHMASTER FLOWTRON®

Insect Killers and Accessories

Safe and effective units attract flies and other light-sensitive flying insect pests with multiple attractants, including ultraviolet light and pheromone-based lure.

Adhesive Board—Safe, silent traps draw pests to a strategically placed large-capacity adhesive board, where they get stuck and remain trapped. Once full, boards are easy to dispose of and replace. No. 24K340 GLOstik™ Flying Insect Trap features a reflective cap with high-efficiency LED light to attract and trap insects to the disposable glue tube. Portable, reusable, battery-operated base with LED lasts up to 10,000 hr. Uses (3)AAA batteries not included. No. 24K338 SilenTrap™ Electric Flying Insect Trap is a freestanding electronic unit with a 13W UV bulb to attract insects into the front housing's glue board. NightGuard No. 1ABE2 is a portable, free-standing unit. Galaxie Nos. 1ABE3–1ABE6 use a combination of ultraviolet energy and Flowtron's exclusive fly attracting pheromone. Ideally suited for installation in front-of-store locations. Elite Stun Unit No. 1ABE1 special stun effect ensures out of sight capture.

Zapper Lantern Style—Once drawn to the unit, insects fly through an electrostatically charged grid where they are killed instantly. Nos. 2W546 and 3ZF09 have removable collection chambers.

PowerVac Vacuum—Once flying pests are attracted close enough to the unit, the powerful vacuum draws them in to a removable, see-through tray for easy disposal. Weatherproof, lightweight, portable unit can be used in just about any outdoor location.

Flowtron Backflight Retrofit Kit—No. 4LV47 includes bracket with prewired socket, bulb, 2 screws, and foam pad with adhesive back.

TOUGH GUY CATCHMASTER BIRD-X

Flyswatters and Insect Traps

Flyswatters—Stiff plastic mesh head measures 5"W x 5"L.

Flying Insect Glue Trap—Adhesive trap has multibait attractant for common flour and grain moths.

Fly Traps—No. 5YAY4 controls nuisance flies and also monitors fly populations to help determine when to treat. No. 5ZPK8 is a nontoxic, odorless and transparent sticky trap that mounts on indoor window panes to trap all types of flying insects. Nos. 8DF85 and 8CNR3 have a multibait attractant designed to lure multiple fly species. No. 8DF85 provides inconspicuous pest control. No. 8CNR3 features a fluorescent chartreuse color and double-sided surface area to trap up to 10,000 flies. No. 45WP99 has a specially formulated lure designed to attract a broad range of flies. Just add water and hang. Features safety lock cap and leakproof design.

Crawling Insect Glue Trap—Ready to use for trapping crickets, roaches, spiders, and other crawling household pests.

Bed Bug Prevention and Detection Monitors—Help identify post-treatment activity. No. 6JHG3 is a cost-effective monitor with low-profile design ideal for tight spaces or behind bed boards. No. 36A149 provides easy visual inspection through the clear shell; for use under mattresses.

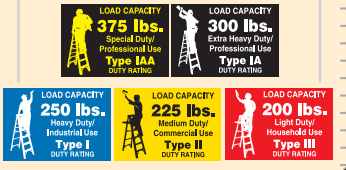
Choose the Right Ladder for the Job

STEP 1: WHAT MATERIAL DO YOU NEED?

Fiberglass or Aluminum?

Fiberglass



Rugged and durable, ideal when working around electricity. Feature noncon-ductive side rails.

Aluminum

Lightweight and easy to carry. Not for use around electricity.

STEP 2: CHOOSE LOAD CAPACITY/DUTY RATINGS

Load capacity is the combined weight of user and materials.

STEP 3: CHOOSE THE SIZE/HEIGHT

STEPLADDERS

Max. Ht. of Desired Reach (ft.)*	Choose This Size (ft.)
7	3
8	4
9	5
10	6
11	7
12	8
14	10
16	12
18	14
20	16

* Assumes a 5-ft. 6" person with a vertical 12" reach.

EXTENSION LADDERS

Height to Top Support Point (ft.)	Choose This Size (ft.) †
9 Maximum	16
9 to 13	20
13 to 17	24
17 to 21	28
21 to 25	32
25 to 28	36
28 to 31	40

† Reflects section overlap, ladder angle and 3-ft. extension above roof line.

L7300 SERIES

- Safely lean against wall
- Rail latch holds rear rail to front rail in leaning mode

Fiberglass, Type 1AA, 375-lb. Duty Rating

Fiberglass, Type 1AA, 375-lb. Duty Rating

7400 SERIES

- Aluminum external rail shields and EDGE Bracing
- Aluminum Tool-Tra-Top® securely holds tools
- Extra-large knee braces—front and back
- Extra-wide base width—widest ladder in industry
- Larger spread than 7300 Series
- Aluminum internal spreader bars

Fiberglass, Type 1AA, 375-lb. Duty Rating

400 SERIES

- Aluminum Tool-Tra-Top®
- Fully knee braced—front and back
- Slip-resistant foot pads
- Internal spreader bars except on 4-ft. and 6-ft. sizes

Aluminum, Type 1AA, 375-lb. Duty Rating

6100 SERIES

- Molded Proguard Boot™ provide firm slip-resistant footing
- Versatile HolsterTop® securely hold drills and tools
- Top accommodates Lock-In accessories
- Metal bottom step knee braces
- Internal spreader bars

Fiberglass, Type 1A, 300-lb. Duty Rating

6200 SERIES

- Orange side rails
- Molded versatile LockTop® securely hold drills and tools
- Top accommodates Lock-In accessories
- Molded large boots with EDGE Bracing
- Steel internal spreader bars

Fiberglass, Type 1A, 300-lb. Duty Rating

370 SERIES

- Molded Tool-Tra-Top® securely holds tools
- Internal "H" spreader on 4-ft., 5-ft., and 6-ft. sizes
- Auto-closing molded pail shelf
- Aluminum foot bracket with slip-resistant pad

Aluminum, Type 1A, 300-lb. Duty Rating

6000 SERIES

- Molded HolsterTop®
- Top accommodates Lock-In accessories
- EDGE bracing at bottom
- External spreader bars

Fiberglass, Type 1, 250-lb. Duty Rating

360 SERIES

- Molded Tool-Tra-Top®
- Auto-closing molded pail shelf
- External spreaders
- Slip-resistant foot pads
- Ideal for painting

Aluminum, Type 1, 250-lb. Duty Rating

5900 SERIES

- Molded HolsterTop®
- Top accommodates Lock-In accessories
- EDGE bracing at bottom
- External spreader bars
- Ideal for light-duty or homeowner use

Fiberglass, Type II, 225-lb. Duty Rating

Adjustable Enclosed Safety Cages

Little Giant Ladder Systems

- Nonconductive, high-strength, fiberglass-resin composite
- Fully adjustable 1-ft. increments

Offer versatile, safe alternative to tie-off, allowing access to constricted areas and drop ceilings while complying with tie-off rules. Help protect operators in a fully enclosed working platform, allowing them to work safely and quickly with 2 hands. Each side adjusts independently to multiple heights; adjusts to work safely on uneven surface and stairs. Models with Wheel Lift™ casters allow cage to move from place to place fully deployed. Built-in Tip & Glide™ wheels make it quick-and-easy to roll anywhere.

Ladder Jacks, Planks and Leveler

WERNER

Aluminum Extension Planks - PA200 Series—Made of 2" deep box section extrusions for outstanding rigidity in ladder jack, trestle ladder, and step stool applications. Locking mechanism sets plank in 12" increments; positive stops prevent overextending.

WARNING: When assembled as a scaffold or staging, planks must be used in conjunction with suitable guardrail protection in compliance with applicable governmental codes, ordinances, regulations, and safe practices.

Ladder Jack Clamping System—Ladder jacks mount to either side of extension ladder and clamps securely hold stage platform to ladder jacks. OSHA and ANSI Standards require ladder jacks only be used on Type 1, Type 1A, or Type 1AA ladders.
- Accommodates up to 20"W stage planks

Description	Series	Overall Length	Load Capacity	Material	Item No.
Extension Plank	PA200	6 to 9 ft.	250 lb.	Aluminum	4XP30
Extension Plank	PA200	8 to 13 ft.	250 lb.	Aluminum	4XP31
Extension Plank	PA200	10 to 17 ft.	250 lb.	Aluminum	4XP32
Ladder Jack Clamping System	—	—	300 lb.	—	4XN82
Ladder Leveler	—	—	—	Aluminum	4XP35

WERNER

Extension Ladders

- Aluminum extruded gravity spring locks
- D-shape rungs except 7100-2 series
- Fiberglass have prepierced holes at top of fly section for easy field installation of accessories

Exclusive ALFLO rung joint connections provide excellent, twist-proof performance. Dual-action feet with spur plate are great for use on hard or penetrable surfaces and molded end caps are mar resistant. Rope and pulley system not included on 16-ft. ladders.

D7100-2 SERIES
- Rung plate rung to rail connections
- Ideal for utility and telecommunication industries
- Base and fly separate
- Rail shield and shoe bracket protect rail from damage
- 36-ft. and 40-ft. are Type 1A 300 lb.

Fiberglass D-Rung, Type 1AA, 375-lb. Duty Rating

7100-2 SERIES
- Round shape rungs
- Ideal for utility and telecommunication industries
- Rung Plate rung to rail connections
- Base and fly separate
- Rail shield and shoe bracket protect rail from damage

Fiberglass, Round Rung, Type 1AA, 375-lb. Duty Rating

D500-2 SERIES
- Interlocking side rails
- Base and fly separate easily
- 1¾" D-rungs
- Base section width is 19⅛"
- 40-ft. and 48-ft. are Type IA 300 lb.

Aluminum, D-Rung, Type 1AA, 375-lb. Duty Rating

D6200-2 SERIES
- Direct rung to rail connections
- Base and fly separate
- Combination rail shield bracket and shoe with slip resistant pad
- Molded rung braces at bottom for increased durability

Fiberglass, D-Rung, Type 1A, 300-lb. Duty Rating

D6200-3 SERIES
- Three-section design allows the ladder to close shorter than 2 section ladders
- Easier to maneuver and transport
- Include carry handle
- Direct rung to rail connections

Fiberglass, Compact, Type 1A, 300-lb. Duty Rating

D1500-2 SERIES
- Stacked side rails so base and fly sections are same 18⅛"W
- Base and fly separate easily
- Dual-action feet with spur plate

Aluminum, D-Rung, Type 1A, 300-lb. Duty Rating

D5900-2 SERIES
- Direct rung to rail connections
- Curved shape side rails for user comfort
- Lighter carrying weight than heavier duty rated ladders

Fiberglass D-Rung, Type II, 225-lb. Duty Rating

D1200-2 SERIES
- Direct rung to rail connections
- Ideal for painting
- Lightweight

Aluminum, D-Rung, Type II, 225-lb. Duty Rating

D1200-3 SERIES
- 3-section, compact
- Interlocking side rails
- Mar-resistant molded end caps
- Slip-resistant shoe with SHU-LOK™ featur and spur plate
- Slip-resistant TRACTIO TRED® D-rungs
- Spring-loaded locks

Aluminum, D-Rung, Type 225-lb. Duty Rating

D6000-2 SERIES
- Direct rung to rail connections
- Combination rail shield bracket and shoe with slip-resistant pad
- Molded rung braces at bottom for increased durability

Fiberglass, D-Rung, Type I, 250-lb. Duty Rating

D1300-2 SERIES
- Interlocking side rails
- 1¾" D-rungs
- Base section is 17⅜"W
- Ideal for painting

Aluminum, D-Rung, Type 1, 250-lb. Duty Rating

WESTWARD

Extension Ladders

Ladders are lightweight and adjustable in 12" increments. Feature aluminum swivel safety shoe.

7800 SERIES
- Converts to a step or extension ladder
- Padded V-rung at top in extension position
- Fixed aluminum locks secure rungs in extension ladder position
- Large hoop feet

Fiberglass, Combination Ladder, Type IAA, 375-lb. Duty Rating

D7100-2LV SERIES
- Rung plate rung to rail connections
- Base and fly separate easily
- Factory installed, foot action Level Lok® extends up to 10" in 3/16" increments
- Prepierced holes at top of fly section for easy field installation of accessories
- 36-ft. and 40-ft. models are Type 1A, 300 lb.

Fiberglass, D-Rung Extension Ladder, Type IAA, 375-lb. Duty Rating

D8200-2EQ SERIES
- Factory installed EverLevel® leveling system: adjusts up to 8 1/4" in 3/8" increments
- Direct rung to rail connections
- Dual-action feet with spur plate

Fiberglass, D-Rung Extension Ladder, Type IA, 300-lb. Duty Rating

9500-2 SERIES
- Fiberglass round rungs
- Rail and rung connected with reinforced nylon plugs
- Unique box beam rail
- Dual-action feet with spur plate

Fiberglass, Round Rung Extension Ladder, Type IA, 300-lb. Duty Rating

560-3 SERIES
- Removable top fly section
- Heavy-duty rope and double pulley system
- Dual-action feet with spur plate
- Maximum working length is 47 ft.

Aluminum, Round Rung Extension Ladder, Type I, 250-lb. Duty Rating

D1800-2EQ SERIES
- Factory installed EverLevel® leveling system: adjusts up to 8 1/4" in 3/8" increments
- Direct rung to rail connections
- Built-in bubble leveler at bottom rung
- Dual-action feet with spur plate

Aluminum, D-Rung Extension Ladder, Type I, 250-lb. Duty Rating

500-1 SERIES
- Dual-action feet with spur plate
- Hoop end caps
- 8-ft. to 12-ft. ladders are 16 7/8"W
- 24-ft. ladder is 20 5/8"W
- 18-ft., 20-ft. and 24-ft. models are Type IA, 300 lb.

Aluminum, Round Rung Straight Ladder, Type IAA, 375-lb. Duty Rating

7100-1 SERIES
- Rung plate rung to rail connections
- Rail shield and shoe bracket protect rail
- Dual-action feet with spur plate for use on hard or penetrable surfaces

Fiberglass, Round Rung Straight Ladder, Type IAA, 375-lb. Duty Rating

M7100-1 SERIES
- Round shaped rungs
- 3-ft. replaceable plastic sleeves to avoid rim damage to rail
- Ladder is 12 3/8"W
- Wide hoop feet with rubber pads at bottom

Fiberglass, Manhole Ladder, Type IAA, 375-lb. Duty Rating

D1500-1 SERIES
- Dual-action feet with spur plate for use on hard or penetrable surfaces
- Mar-resistant end caps
- Ladder is 18 1/8"W

Aluminum, D-Rung Straight Ladder, Type 1A, 300-lb. Duty Rating

D6200-1 SERIES
- Dual-action feet with spur plate for use on hard or penetrable surfaces
- Molded rung braces at bottom for increased durability
- Ladder is 19"W

Fiberglass, D-Rung Straight Ladders, Type IA, 300-lb. Duty Rating

S7700 SERIES
- Ideal for manhole use
- Maximum number of 3-sections can be used, each section 6-ft. high
- Lock sections with cam driven tension clamps
- Ladder width 12"
- Requires Shoe No. 41D286 and End Cap No. 41D285, available separately

Fiberglass, Parallel Sectional Ladder, Type I, 250-lb. Duty Rating

WERNER

Specialty Extension and Straight Ladders
- Exclusive ALFLO rung joint connections for twist-proof performance except 9500 Series

General Aerial Work Platforms

Genie® A TEREX BRAND

AWP™ Series—These platforms feature user-friendly controls with auxiliary platform lowering. Designed with durable, exclusive Genie® mast system and rocker base system for easy maneuvering around and over obstacles. Small outrigger allows for positioning close to walls. Use with Super Straddle accessory No. 38R201 to work over fixed seating.

Boom Lift Series—Provide the ultimate versatility in positioning capabilities, giving a wide range of motion allowing above and below rotation for precise positioning. Works in tight spaces, as well as those difficult to reach, and hard-to-access work areas. Offer quiet emission-free operation in most sensitive work environments.

IWP™ Series—Industrial work platforms have a rigid aluminum mast designed for strength, reliability, and low maintenance. No outriggers are needed due to automatic level sensing with integrated leveling jacks. Designed with auxiliary platform-lowering feature on both platform and ground controls.

GR™ and GRC™ Series—GR™ Runabout Series are compact, low-weight self-propelled machines. Feature zero inside turning radius, 30% gradeability, and proportional lift and drive controls. GRC™ Runabout Contractor Series feature tube-in-tube telescoping steel mast and steel platform. Lifts will drive when fully elevated, providing access to all major components for convenient servicing.

Aerial Work Platform Course No. 45JJ77—Genie® Lift Pro™ online operator training is a high-quality, professional-grade program that is delivered through a web-based platform and is designed to satisfy the general training requirements for aerial work platforms as defined by ANSI, OSHA, and CSA.

Slab Scissor Lifts

Genie® A TEREX BRAND

- Meet ANSI A92.3, CSA B354.1, EN 280, AS1418.10

Environmentally friendly electric lifts release no emissions and onboard diagnostics make troubleshooting easy. Ideal for maneuvering in tight spaces around indoor and outdoor construction with solid, nonmarking tires. Also used for maintenance and installation applications on firm, level surfaces. All lifts except No. 38R226 feature a 39" roll-out platform extension, proportional controls for drive functions, multiple disc brakes, emergency stop at platform and ground controls, and AC power to platform.

No. 38R226—This scissor lift gains access to even loftier jobs, providing working heights up to 38 ft. while fitting into spaces as narrow as 32"W. Features self-leveling outrigger that levels the lift on uneven ground up to 5º side to side.

Personnel and Merchandise Lifts

PERSONNEL LIFTS

Ballylifts

Totally enclosed platform has built-in ladder with flat, skid-resistant treads and grab rails provides access to platform in fully lowered position while antiskid rungs provide access to platform when lift is raised. Features leveling jacks secure lift to floors and uneven surfaces. No. 8ADE3 is a cantilevered platform with aluminum deck. No. 8WZ64 has a standard platform.

MR Lifts

Roomy 28" x 36" enclosed platform accommodates 2 workers and has built-in ladder with flat, skid-resistant treads and grab rails. Features leveling jacks help secure lift to floor and also compensates for uneven surfaces. Self-storing outriggers extend from base to provide stability. Rails fold for doorway passages and storage.

Drivable and Pushable Vertical Mast Lifts

These lifts holds 1 person and are ideal for work on overhead lighting and ceiling maintenance. No. 53DN39 reaches a platform height of 18 ft. and No. 38GT54 reaches a platform height of 30 ft.

MERCHANDISE LIFTS

Power Stocker

- Nos. 26X075 and 26X077 include a safety sensor

Ground-entry, drivable and pushable hydraulic order pickers raise merchandise to shelf level and allow merchandise to slide off easily to minimize lifting. No outriggers are required. Floor locks on pushable models secure the lift in place. High-quality controls for additional safety and ease-of-use. Guardrails are removable, making loading and unloading easy. Recharge using a standard 110V outlet. Charger cord included.

With Riggers, No. 38GT54

No. 8RL02

Portable Personnel Lifts

- **Safer, more versatile alternative to ladders and scaffolding**
- **330-lb. capacity**
- **Includes tool tray**

The LiftPod® is easily disassembled to fit in the back of a pickup truck while the Ecolift's patented stored power system raises and lowers the platform quietly without batteries or hydraulics. Ideal for plant and facility maintenance and various contractor applications.

Drivable Scissor Lifts and Pushable Mini Scissor Lifts

- **No outriggers required**
- **Meet ANSI Standards**

Easy-to-operate with joy stick control and feature emergency stop button and lowering system. Pushable, ground entry, 12VDC, lifts are designed with a slim base for access to tight areas. Recharge using a standard 110V outlet. Power unit stored in lockable slide out drawer and comes with battery charge indicator. Drivable scissor lifts have extendable cantilever platforms, minimizes the strains from pushing lifts, providing additional access to machinery and equipment. Also, drivable at full heights and have a battery power source.

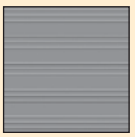
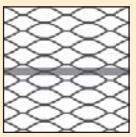
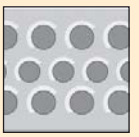
Features to Consider When Choosing a Rolling Ladder or Work Platform



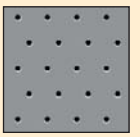
TREAD



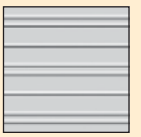
Use the chart to find the right tread material for your work environment.



Tread Types:

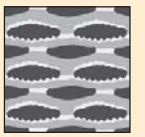


FEATURE	SERRATED	PERFORATED/ OPEN GRIP	EXPANDED METAL	RUBBER MAT/ ABRASIVE MAT/ ANTISLIP VINYL	RIBBED (ALUMINUM)	RECOMMENDED USE
Aggressive Slip-Resistance	●					Ideal in the harshest enviornments where liquids are present and other materials that can create buildup on the tread including grease, oil, and other debris.
Maximum Drainage & Self-Cleaning Properties			●			The most open tread design that provides maximum drainage and self-cleaning properties.
Good Slip-Resistance & Drainage Properties		●				The most common tread used and ideal in most environments. Upward holes provide excellent slip-resistance and downward slots provide good drainage of liquids (exclusive to Tri-Arc).
Durability & Longest Lasting	●	●				Utilize the most material making these treads able to withstand the constant use over time and extending the life of the ladder and keeping it safe for use.
Least Aggressive Environments (offices, backrooms, retail store floors, etc.)				●	●	These solid treads provide slip-resistance properties that are ideal in environments where all types of shoes can be worn and where there are not liquids and other debris found.



Abrasive Mat

Antislip Vinyl



Expanded Metal

Open Grip

Perforated

Ribbed

Rubber Mat

Serrated

PLATFORM HEIGHT
Subtract 5- to 6-ft. from desired working height.

OVERALL HEIGHT
Consider ceiling or overhead obstructions.

FEATURES TO CONSIDER WHEN CHOOSING A ROLLING LADDER OR WORK PLATFORM

When selecting a rolling ladder, it's important to consider the required access, working height, and load capacity. Understand your space and your needs, as picking the right size or length is just as important as the style you choose.

Load Rating

Load Rating is the maximum weight capacity the ladder can safely carry, including the weight of the user and equipment. Make sure to factor in your tools and protective gear when looking for the right ladder.

Size Considerations

The higher you work, the wider your ladder must be in order to remain safe. Consider working height or height and width limitation on ladder dimensions.

Ladder Actuation

Rolling ladders feature various safety locking mechanisms to make sure your ladder doesn't roll while in use.

BASE DEPTH
Typically the taller the ladder the wider the base. Ladders with a 24"W or smaller base are suitable for use in tight spaces or narrow aisles.

PLATFORM DEPTH
Consider working area.

No. 3UY16

Cotterman® Ballymore SAFETY LADDERS

Steel Rolling Ladders

Customize Your U-Design Steel Rolling Ladder

Configure your U-Design Steel Rolling Ladder exactly how you want it. Combine additional features to build a productive ladder for your needs.

Select from 3 Accessory Kits

Perforated

Serrated

- **Deep Top Kits—**Add 10" or 20" of additional length to the platform.
- **All-Direction Maneuverability Kits—** Enable the ladder to turn within its own radius.

- **Stock Picking Shelf Kits—** Add two or three 50-lb. capacity shelves.

Note: All-Direction and Stock Picking Shelf Kits cannot be combined. A Deep Top Kit is required when ordering a Stock Picking Shelf Kit.

Find more information on Rolling Ladders on page 1034.

3-Step Standard Base No. 20Z356

5-Step Straddle Base No. 6MXV6

Cotterman® Welded Steel Tilt-N-Roll® Ladders

- 30"H handrails included
- Ship assembled
- 450-lb. load capacity (standard base); 350-lb. load capacity (straddle base)
- Gray
- 59° climbing angle
- No ladder actuation

Ladder rests solidly on four 2½" rubber pads when climbing. Easily moved by tilting back on 4" wheels with handrails. The balanced design won't allow ladder to scoot away or toward user.

Note: See Grainger.com® for Safety Yellow options.

Cotterman® Welded Aluminum and 304 Stainless Steel Tilt-N-Roll® Ladders

- 30"H handrails included
- Ship assembled
- 59° climbing angle

During climbing, each standard base ladder sits solidly on four 2½" rubber pads for greater stability. Easily moved by tilting back on 4" wheels with handrails. The balanced design won't allow ladder to scoot away or toward user.

Lock-N-Stock Steel Folding Ladders

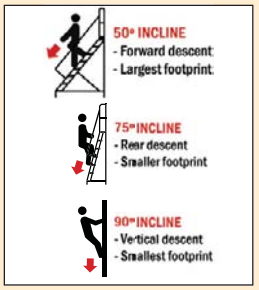
- 22"H handrails included
- Ship assembled
- 350-lb. load capacity
- 7" platform depth
- 16" platform width
- 24" bottom width
- Blue
- Rear exit on Nos. 3KNK7 and 3KNK8
- 59° climbing angle
- No ladder actuation

Ladders are easy to climb, roll, fold, and store. Lock in folded or climbing positions. Easy-to-maneuver in open or closed position.

Platform Height	Overall Height	No. of Steps	Base Depth	PERFORATED Item No.
19"	41"	2	17"	3KNK7
28½"	50½"	3	23"	3KNK8
38"	60"	4	30"	4UDL5

No. 3KNK8

Find more information on Rolling Ladders on page 1034.



U-Design Configurable Platform Selection Guide

STEP 1

Select an Incline:

Crossover Platforms (CP) and Rooftop Platforms (RP) use 2 ladders paired together. Different inclines are acceptable.

Max-Access Platform Systems (MAPS) use 50° incline stair units/ladders.

STEP 2

Select a Ladder Height:

CP: Choose based on vertical clearance height need for application.

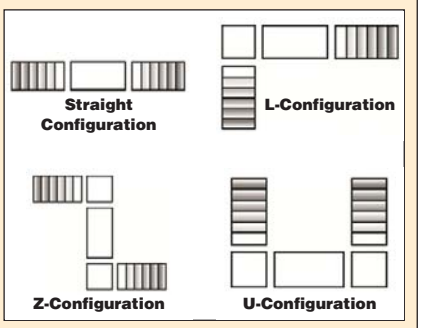
RP: Select a ladder with a height greater than the required height.

MAPS: For crossover applications, deduct 5" for clearance height.

STEP 3

Select a Span or Platform:

CP and RP: Combine 20" and 30" spans to create up to 90" of horizontal clearance. For spans over 90" (CP) or 120" (RP), use a leg kit.



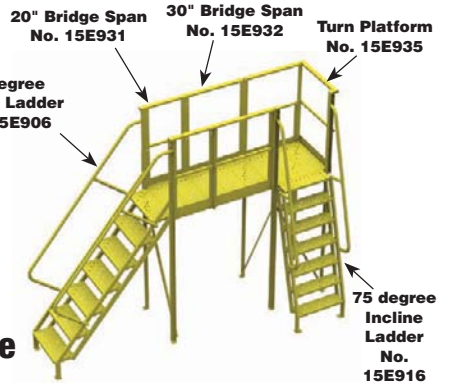
MAPS: Create platform configurations by combining 36" x 36" platforms. A tower support leg is required when 3 platform units are combined.

STEP 4

Select a Crossover Configuration or Support Legs:

CP and RP: Add turn platforms for configurations requiring a 90° turn including L-, Z-, or U-shaped crossovers.

MAPS: A tower support leg is required for each 50° stair unit/ladder.



STEP 5

Select Platform Handrails:

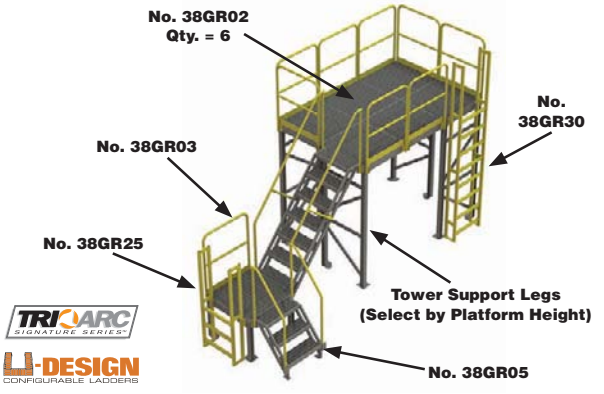
MAPS: Add handrails to any side for fall protection. 5-step and larger ladders require handrails on all platform unit sides for code compliance.

A configurator tool is available at Grainger.tri-arc.com/GRconfigurator_login.html

TRI-ARC SIGNATURE SERIES
U-DESIGN CONFIGURABLE LADDERS

Configurable Crossover Platforms

- 1000-lb. load capacity
- 24"W steps
- Clearance height is 2" below platform height



Customize a crossover platform by choosing components based on environment and application requirements. Platforms require minimal assembly, include assembly hardware, and have foot plates for bolting to the floor. Rectangular tubing frame is 1" x 2" and tubing handrails are 1½" dia. Individual pieces are 30"W overall and guardrails are 42"H above platforms. Steel construction with yellow powder-coat finish. Meet OSHA Standards.

Configurable Cantilevered Rolling Ladders

TRI-ARC SIGNATURE SERIES™ U-DESIGN CONFIGURABLE LADDERS

- 300-lb. load rating
- Clearance height to floor is 2" less than platform height
- 50° climbing angle
- Unsupported and supported cantilever platforms are available in 20", 30" and 40" depths
- Meet OSHA and ANSI Standards

Design a customized cantilever platform by selecting a model based on environment and application requirements. 5" x 2" polyurethane swivel casters have total-lock brakes. Steps are 24"W. Unsupported models have 30"W overall width; supported models have 41" overall width. Guardrails are 42"H, rectangular tubing frame is 1" x 2", and tubing handrails are 1½" dia. Yellow powder-coat finish. Cantilever Ladder Support Conversion Kits convert unsupported cantilever to supported cantilever.

U-Design Configurable Rooftop Platforms

TRI-ARC SIGNATURE SERIES™ U-DESIGN CONFIGURABLE LADDERS

- 500-lb. load rating
- Aluminum construction
- 1" x 2" rectangular tube construction
- Meet OSHA and ANSI Standards
- Grip strut tread

Easily create safe access over pipes and other rooftop obstacles. Special support feed distributes weight to prevent damage to roof membranes. Combine up to a total of 120" uninhibited span clearance length. A ladder support leg is required for spans greater than 120".

Spacesaver Crossover Bridges

Cotterman®

- 500-lb. load rating
- 24"W and 5"D steps
- Serrated or diamond plate treads
- Gray powder-coat finish
- 70° climbing angle

These crossover bridges allow you to walk safely over high traffic areas, equipment, duct work, or other obstacles providing mobility and access to needed areas. Steeper 70° climbing angle provides a less overall footprint. Constructed of rugged welded aluminum or steel 4" toe boards and mounting holes on legs.

Tank Top Lifts

Ballymore Safety Ladders

- 300-lb. load cap.
- 8" casters (2 swivel, 2 rigid)
- Gray powder-coat finish

Provides safe and easy access to tank trucks, railroad cars, and other cantilevered applications. No. 4UDL6 is adjustable and comes with a large-dia. cylinder. No. 8N969 is a fixed height.

Call Grainger to specify height when ordering.

BILJAX Haulotte

Indoor Rolling Utility Work Platforms

- Yellow powder-coat finish
- Lightweight
- Can easily be set up and dismantled by one person
- Platform adjusts every 2" in height
- Roll from room to room without disassembling
- 5"-dia. casters with locking wheels

Pro-Jax® lightweight, all-steel scaffolds are designed for indoor use. Plywood deck platform has steel frame and supports. Casters are removable for use on stairs. Knurled rungs. Outrigger needed when increasing platform height. Ideal for electrical, painting, acoustical, and finishing work; window cleaning; sign installation and maintenance; building maintenance; and HVAC installation.

Note: Guardrails are required by OSHA on all platforms 10 ft. or higher.

Indoor/Outdoor Rolling Tower Work Platforms

- Yellow powder-coat finish
- Provide larger platform for multiple persons and materials
- Greater height capability than utility scaffolds
- Can accommodate longer length requirements
- 8"-dia. casters with locking wheels

Complete systems assemble quickly and easily; frames, braces, inserts, attachments, guardrails and workboards. High-strength steel tubing frames have coped and arc welded perimeter joints. Large, adjustable-height work platforms and easy-access guardrail system. Order accessories separately to reconfigure or expand existing tower systems.

Scaffold Towers

METALTECH®

- Towers meet OSHA, ANSI, and CSA requirements

Jobsite Series™—Suitable and safe for all types of interior work and can be easily stackable up to 3 units high. Steel construction with yellow powder-coat finish. Include 5" casters for easy mobility.

Saferstack® Contractor Series—Complete scaffold tower is 2 sections high with safety guardrails and platforms. Frames stack in 30% less space than regular models, interlock for safer storage and transport, and help prevent stacked frames from sliding. Constructed with steel, aluminum, and wood with a blue antislip, textured powder-coat finish. No. 38HT50 includes 4 leveling jacks.

Tele-Tower Adjustable Work Platform

Adjustable Rolling Steel Platforms

- Can be easily assembled by 1 person in about 5 min.
- Include four 5" locking casters
- Yellow color

Platform height manually adjusts from 2 ft. to 11 ft. (in 6" increments). Platforms come complete with outriggers, toeboards, and guardrails. Outriggers telescope out on all 4 corners for a better than 3:1 height-to-base ratio. Platforms meet OSHA, ANSI, and CSA requirements.

Order accessories separately to reconfigure or expand existing tower systems.

TRI-ARC SIGNATURE SERIES

Refrigerator Truck Rolling Access Platform

- Height adjusts in 4" increments

Provides fall protection during routine maintenance and inspection of refrigeration units on small- to medium-sized box trucks. 24"L x 120"W platform provides a comfortable and safe work surface. Serrated tread surface for slip resistance and drainage; ladders on both sides for dual access. Reinforced lifting points accommodate adjustability using standard engine puller and designated lifting point for using rope and bucket for bringing items from ground to platform.

Height	Platform Width	Depth	Overall Height	Load Capacity	Item No.

Adjustable-Height Steel Work Platforms

Cotterman®

- 800-lb. load rating
- Meet OSHA and ANSI Standards
- Gray powder-coat finish

Achieve a comfortable working height and eliminate unnecessary reaching. Legs adjust individually to accommodate uneven floors or obstructions. Grip strut. Open grid platform and tread allow liquids to drain quickly. For oily, wet, or outdoor environments.

1-Step—Create larger elevated work areas by placing them side-by-side or end-to-end. 6" to 9" and 10" to 15" have 2½" rubber pads on all four legs.

2-Step—Adjusting device keeps the step rise equal when platform height adjustment is made. Ship fully assembled.

Cotterman®
Adjustable Work Stands with ErgoMat Deck

- 800-lb. load rating
- Durable, powder-coat finish

Platforms adjust to the desired working height and can be placed side-by-side or end-to-end for a larger standing area. Ergonomic matting reduces fatigue and provides additional comfort when standing for long periods of time. Adjustable legs accommodate uneven floors.

Cotterman® Welded-Steel Safety Cages

- Gray powder-coat paint finish
- Meet or exceed OSHA Standards

SAFETY CAGES

Modular cages help make existing fixed ladder OSHA compliant. Cages mount to the side rails of fixed ladders up to 20"W. Top and middle sections have a 29" I.D.; bottom section flares to a 34" I.D. for easy entry. Include mounting hardware for flat or angle side rails.

To determine proper length, the cage should begin 7 ft. to 8 ft. from the floor and extend 42" above the landing surface (except for hatchways). Use this figure to build a combination of one bottom section, plus middle section and top sections for ladders with 42" extend handrails.

LADDER GUARD

Steel With Walk-Thru Handrails

How to Choose What Service Classification You Need

WEIGHT CAPACITY	INPUT VOLTAGE	LIFT SPEED	CHAIN LENGTH (Lift)	LOAD MOVEMENT	NUMBER OF LIFTS	START/STOPS	OPERATING TIME
Determine the max. weight you need to lift. (include lifting, supporting, and positioning devices).	What is the nominal voltage (±10% of rated voltage) in your facility? Single-Phase 115 or 230V 3-Phase 208, 230, or 460V.	What speed do you want to lift the load? Industry standard for ⅛ to 1 ton is 16 ft./min. (fpm). 2 ton is 8 fpm. For flexibility consider a variable-speed lift.	Measure from the point of mount to the floor.	What is the actual distance the load must be lifted and lowered?	Determine the number of lifts per hour for the job.	How many times does an operator activate the push-button control? Rule of thumb: 8 start/stops per cycle (load lift and lower).	Hoists have a "Service Classification" rating. To determine this classification for your job, use the following calculation: Minutes Run Time = Feet of Load Lift x Lifts per Hour x 2 ÷ Hoist Speed Then calculate: % On Time = Minutes Run Time ÷ 60
Ex: 2400 lb. includes all the components of the load (pallet, drum, sling, etc.).	Ex: 230V	Ex: 8 fpm	Ex: 12 ft.	Ex: 7 ft.	Ex: 15	Ex: 120 start/stops	Ex: 12 ft.

Hoist Service Classifications

Service Classification	Total Equipment Running Time	Max. Start/Stops Per Hour	Typical Areas of Application
H4 - Industry Standard	Approaching 50% of the work period	300	High-volume handling in steel warehousing, machine shops, fabricating plants, mills, and foundries. Manual or automatic cycling operations in heat-treating and plating operations.
H3	Not to exceed 25% of the work period	150	General machine shop, fabricating, assembly, storage, and warehousing use, where loads and operation are randomly distributed.
H2	Not to exceed 15% of the work period	75	Light machine shop, fabricating industries, and service and maintenance work, where loads and use are randomly distributed with capacity loads infrequently handled.

Note: For higher duty cycles, refer to the Air Hoist section.

No. 452R33

No. 452R42

Dayton

H4-Rated Single-Speed Electric Chain Hoists

- Lubrication: grease
- Positive braking, under all load conditions
- Include chain container
- Heat-treated steel alloy chain

Brake stops and holds the load, even with loss of power. Rigid top and swivel load hooks provide positive load engagement. Include over-travel prevention system. Overload limiting clutch prevents hoist damage from heavy loads. 15-ft. power cord. Dual-voltage hoists reconnect for use at 230VAC. Meet ANSI/ASME B30.16 UL 1340.

Note: Replacement parts available on Grainger.com

H3-Rated Single-Speed Electric Chain Hoists

- Gears are enclosed in grease case
- Electric disc motor brakes
- Thermal overload protection
- Chain container included
- Hardened alloy steel chain

Latch-type hook provides positive load engagement. Brake stops and holds the load, even with a loss of power. Offer up to 18-min. "On" time per hr. with full thermal protection. Upper and lower limit switches prevent chain overtravel. Meet NEMA 1 Standard, UL and C-UL Listed.

H4-Rated NER 3-Phase Electric Chain Hoists

HARRINGTON
A XTO GROUP COMPANY

- Dual speed via under-the-cover variable frequency drive
- Count hour meter and chain container
- Plug-in pendant and power cord
- Low-profile upper and lower limit switches
- 10-yr. warranty on brake
- IP55 rated for indoor or outdoor use
- Meet ANSI/ASME B30.16 and UL 1340
- RoHS Compliant

Designed for heavy- and severe-duty applications.

H4-Rated NERP 3-Phase Electric Chain Hoists with Push Trolley

HARRINGTON
A XTO GROUP COMPANY

- Push trolley operates on S or W beams
- Side guide rollers for smooth travel
- High-strength, Grade 80, nickel-plated load chain
- Includes chain container
- Meet ANSI/ASME B30.16 and UL 1340
- RoHS Compliant

Hoist and trolley rated IP55 for indoor or outdoor use and are built to handle heavy- and severe-duty applications.

H4-Rated NERM 3-Phase Electric Chain Hoists with Motorized Trolley

HARRINGTON

- Hoist and trolley are suitable for indoor or outdoor use
- Lightweight, die-cast aluminum body
- Fan-cooled motor with 60-min. duty rating
- Electromagnetic brake will not release unless motor is energized
- 5-pocket load sheave reduces chain vibration
- Grade 80 nickel-plated load chain
- Chain container included
- Upper and lower limit switches
- Trolley operates on S or W beams
- Side guide rollers for smooth travel along beam
- Rubber bumpers and drop stops
- Meet ANSI/ASME B30.16 and UL 1340

Note: See Grainger.com® for variable-speed options.

H4-Rated SNER 1-Phase Electric Chain Hoists

HARRINGTON

- Hoist is suitable for indoor or outdoor use
- Compact, die-cast aluminum body
- Pull-rotor motor brake with no brake coil to fail
- Heat-treated, Grade 80 nickel-plated chain
- Chain container included
- Easy-access control panel
- Long-life friction clutch
- Load sheave design reduces vibration and wear
- Cast-iron chain guide provides smooth, quiet operation
- Meet ANSI/ASME B30.16

H4-Rated 1-Phase Electric Chain Hoists with Trolley

HARRINGTON

SNERP WITH PUSH TROLLEY

- Pull-rotor motor brake for reliability
- Hinged control panel, sealed housing, and durable load sheave
- Push trolley provides extra mobility
- Suitable for S or W beams
- Meet ANSI/ASME B30.16

SNERM WITH MOTORIZED TROLLEY

- Vibration-reducing load sheave
- Durable pull-rotor motor brake
- Low-headroom design
- Grade 80 nickel-plated load chain
- Chain container included
- Trolley operates on tapered or flat beams
- Side guide rollers for smooth movement and reduced wear
- Includes drop stops and rubber bumpers

H2-Rated Single-Phase Electric Chain and Wire Rope Hoists

Dayton

- Gears are enclosed in a sealed grease case
- Electric disc motor brakes
- Thermal overload protection
- 115V
- 1000- and 2000-lb. models include chain container
- Hardened alloy steel chain

Ideal for applications that require multiple lift points. Commercial-duty hoists feature latch-style swivel hooks for positive load engagement. Brakes stop and hold load, even during power loss, while upper and lower limit switches prevent chain overtravel. 12-min. "On" per hr. duty cycle. Include 13", 3-prong plug power cord. Meet NEMA 1 Standard, UL and C-UL Listed.

Electric Chain Hoists—¼-ton, 800-lb., and 1-ton capacity hoists are double-chained.

Electric Wire Rope Hoist—Paddle limit switch provides positive protection in the "Up" direction.

Single-Phase Dual-Speed Electric Chain Hoists

HARRINGTON

No. 6HJP7

- Heat-treated gearing
- High-performance friction clutch
- Compact and lightweight, die-cast aluminum body
- Precise load positioning
- Chain container included
- Corrosion-resistant, nickel-plated load chain
- Meet ANSI/ASME B30.16, ASME HST-1, and NFPA 70 Standards

Single Adjustable Speed V-Models—Engineered with Smart Speed Technology so you can change the factory set speed to a higher speed with a simple adjustment inside the hoist. These compact units provide low headroom and are easily installed, transported, or stored. Perfect for industrial and commercial applications.

Dual-Speed—Low speed can be adjusted from 0 to 100% of maximum speed by setting a screw within pendant.

Ergonomic Dual Adjustable Speed—One-handed cylinder control frees other hand to easily position load. Rocker switch above handgrip permits easy low- and high-speed selection, while finger turn knobs set speeds from 0 to 100%.

1- to 10-Ton Ultra-Low Headroom Trolley Hoists

No. 6HJH2

- All-steel construction
- 20-ft. standard lift
- Double-enclosed brake cover
- Grade 100, heat-treated manganese alloy load chain
- Trolley wheels fit on both tapered and flat flanged beams
- Ideal for applications where longer hook travel is required
- Meet ANSI/ASME B30.16 Standards

Offering one of the lowest headroom hoists on the market today, these hoists provide a minimal distance between the bottom hook when at its highest point and the support beam.

Load Capacity	Pull to Lift Rated Load	Min. Between Hooks	Fits Beam Flange W	Item No.

½-Ton 30-Ton

OZ LIFTING PRODUCTS LLC

¼- to 30-Ton Manually Operated Hand Chain Hoists with Overload Protection

- Load-tested at 150% capacity
- Forged alloy steel hooks with cast-steel safety latch and bolt-and-lock nut
- Weatherproof load-holding Weston-type brake with twin pawl design
- Fully enclosed gearing protects gears from debris and contamination

When activated, factory-set overload protection will not let hoist operate, but allows operator to lower load (if lifting) or release load (if pulling). Hand-wheel design enables hand chain to feed directly into wheel sprocket from any direction or angle. Lower block has a thrust bearing, allowing easy rotation of a suspended load without twisting load chain. Meet HMI and ANSI/ASME B30.16, CE, AS 1418.2 Standards. No. 48RD59 meets ASME B30.16 Standard.

Ratchet Pullers

Dayton® WESTWARD® TUF-TUG PRODUCTS

Positive-locking ratchet teeth have a larger metal surface engaging the holding mechanism. Large ratchet dia. with high tooth count permits accurate positioning of loads. Heat-treated, drop-forged steel latch hooks are zinc-plated to resist corrosion. Include preformed galvanized aircraft cable and a self-aligning cable guide that minimizes cable wear. Comply with ASME B30.21 requirements for pulling, lifting, and tensioning, except No. 3AY61.

CABLE PULLERS

Dual-interlocking ratchet-drive design centers load stresses across unit for easier operation while lifting or pulling. Zinc-plated solid steel construction with heat-treated levers and fasteners provides extra strength and durability. 28" tubular steel handle. ¼" cable dia. Unit can be used in single- and double-line configuration.

WEB-STRAP PULLERS

Dual ratchet-drive mechanism is designed for lasting durability in electrical utility work, construction, and industrial maintenance/repair operations. 1¾"W web strap is nonconductive when clean and dry.

Single-line web puller features 1" nylon web with red warning cores and a 23½" steel handle with vinyl grip. Safety-latched hooks rotate 360°.

ROPE HOIST/BLOCK & TACKLE

- 4:1 mechanical advantage
- 50-ft. rope

Assists with light industrial lifting, pulling, positioning, and stretching tasks. Roller cam lock holds load in position. Zinc-plated with heat-treated, drop-forged steel latch hooks will provide years of tough service. ⅜" rope dia.

Push Trolleys

- Designed at 5:1 to hold either manual or powered hoists
- Fit flange widths up to 8.06"
- Permanently lubricated, sealed precision bearings

For use with tapered and flat beams. Steel construction with cast-iron wheels. Axles are rivet-locked in place and aligned. Safety-enhanced rail sweeps/drop stops. Suspension bail permits quick hoist changeout and use of oversized hooks.

Load Capacity	Fits Beam Height	Fits Beam Flange W*	Min. Radius Curve	Head Room To Bail	Trolley Wheel Dia.	Item No.
1000 lb.	4" to 24"	2⅝" to 8"	36"	6¼"	2¼"	3MB59

Easy-Rolling Push Trolleys

- Use with electric, air, and manual hoists
- Fit flange widths up to 6"
- Sealed precision bearings

Maintenance-free trolleys have solid machined cast-iron wheels. Self-aligning, wraparound side plates prevent falls in case of wheel failure. Include universal hook plate.

40,000 lb.	8¼" to 13"	157"	9⁶¹⁄₆₄"	6¹¹⁄₁₆"	36T683
60,000 lb.	5½" to 13"	197"	15¹¹⁄₃₂"	7⁵⁵⁄₆₄"	36T684

** Dimensions given are for minimum I-beam and will vary with larger beams.*

Caution! Obtain professional structural engineering assistance to determine load carrying capability of new and existing structural steel beam work.

Dayton HARRINGTON

Beam Clamps

- For commercial, construction, and industrial applications
- Adjustable to fit a wide range of beam sizes

Provide a temporary or permanent mount to tapered or flat I-beams. In addition, they position the load beneath the center of the I-beam. Designed to reduce I-beam stress by applying the load inside of the flange edge. Include suspension bar. Comply with ASME Standards.

No. 4ZW25

HARRINGTON

½- to 10-Ton Push Trolleys

- Contoured wheels
- Load equalizing suspension
- Maintenance-free sealed ball bearings
- Bearings are lubed for life
- Fit both tapered and flat-flanged beams
- Meet ANSI/ASME B30.11 Standards

No. 23XR94

Feature specially designed contoured wheels that fit both tapered and flat flange beams. Load equalizing suspension distributes the load to all wheels. Maintenance-free, sealed precision ball bearings are lubed for life and offer smooth movement, with low friction and long life.

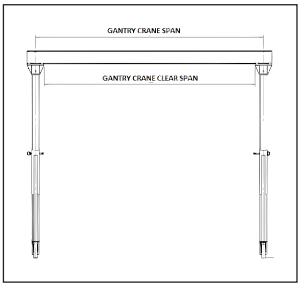
Adjustable- and Fixed-Height Gantry Cranes

- Balanced design for easy rolling even under load
- Simple, bolt-together construction
- Easy set-up and maintenance
- Heavy-duty Conform to AISC, OSHA, and CMAA Specifications.

Adjustable-Height Aluminum—Lightweight, all-aluminum gantry cranes are perfect for applications where crane weight is critical. Height and span are adjustable. Height adjusts down from maximum in 6" increments.
- 4 poly-coated swivel casters



Adjustable-Height Steel—Heavy-duty, supported leg design. Adjustable span on 10- to 16-ft. models. Height adjusts down from maximum in 12" increments.
- 4 steel swivel casters

Fixed-Height Steel—Designed with supported legs for heavy-duty appliations. Adjustable span is standard. Assembly instructions provided.
- 4 steel swivel casters

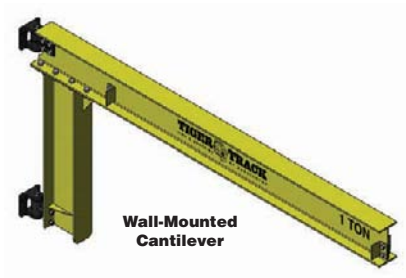
Portable Steel and Aluminum Gantry Cranes

GRAINGER APPROVED

- 4 swivel casters
- 2 uprights and 1 crossbar I-beam

Accept most manual and electric hoists and trolleys (not included). Ship unassembled.



Heavy-Duty Steel—Casters feature a 4-position swivel lock in 90° intervals. Red paint finish.

Heavy-Duty Aluminum—Suitable for two-person assembly in the field or where repeated assembly and knock-down is required. Pinned-together modular design completely disassembles. Casters feature 4-position swivel locks in 90° intervals.

Adjustable-Height Models—Adjust in 6" increments by using come-along, fork truck, or overhead crane (not included). Uprights have ratchet puller/come-along attachment points.

Jib Cranes and Mounting Kits

Caldwell
HARRINGTON

Cranes accommodate most standard trolleys that support electric or manual hoists. Anchor bolts not included. Mounting kits support hoists and trolleys (not included).

WALL-MOUNTED

Rotate up to 180° in large applications. Up to 35-ft. span on tie rod style. Heavy-duty fittings made with roller bearings and zerk fitting for easy field lubrication. Easily mount to reinforced columns or walls. Include beam with end stops, fitting kit, and assembly hardware. Painted safety yellow.

BASE-MOUNTED PILLARS

Rotate 360° on tapered roller bearings with self-aligning guide rollers. Heavy gussets reinforce base plates to ensure alignment and rigidity. Rolled steel, wide-flange beams provide smooth trolley travel, with stops at both ends. Concrete footing required.

Truck/Floor-Mount Jib Cranes

Mount to truck trailer bed or floor. Crane swivels 360°, and boom manually telescopes. Steel construction with painted finish. Mounting base has predrilled holes (hardware not included).

MANUAL WINCH

Boom is raised with manual hydraulic hand pump. Cable winch raises and lowers the lifting hook. 8" x 8" base plate.

POWER WINCHES

- 12" x 12" base plate

DC Models

50-ft., 3/16"-dia. wire cable and 12½-ft. power cord for attaching to truck battery (battery not included). Handheld remote control on 8-ft. cord.

AC Models

25-ft., ¼"-dia. wire cable and 9-ft. power cord have molded plug. They operate with toggle switch on side of winch.

CompOZite Davit Cranes

DAVIT CRANES

Cranes use a combination of advanced composite materials and Mil-Spec, zinc-plated steel to create a light, long-lasting, and easy-to-use system for lifting. Composite material also has excellent corrosion resistance. Each crane is proof tested and includes a test certificate.

MOUNTING BASES

Include mounting pattern template. Wall-mount base has a 360° swivel angle.

CABLES

The galvanized assembly is good for general purpose, and the stainless steel is ideal for corrosive environments.

Counterbalanced Mobile Floor Cranes

Counterbalanced design eliminates the need for front legs. Allows easier maneuverability in tight and hard-to-reach areas. Boom is raised with a manual hydraulic hand pump.

Handheld Vacuum Cups

Attach to most nonporous surfaces without marring or scratching. For metal, glass, stone, concrete, laminates, and plastics. A finger-operated vacuum pump removes air from between the load and the rubber vacuum pad to hold the cup in place. A red-line indicator provides a visual warning if cup should lose holding power. Includes a heavy plastic pad protector, except Nos. 2MDE3 and 2MDE4. Nos. 6A985 to 6A988 include a plastic carrying case.

Plate, Girder, and Handgrip Clamps

DAYTON®

Clamps are equipped with a safety mechanism, ensuring the clamp does not slip when lifting force is applied and when load is being lowered. 300% overload factory tested.

WARNING: Universal Plate Clamps

DO NOT use to lift loads that weigh less than 20% of the working load limit (e.g., 3300-lb. clamp should only be used for plates weighing 660 to 3300 lb.). Lift only one plate at a time.

RENFROE

Clamps are equipped with a safety mechanism, ensuring the clamp's gripping surface remains in contact with the plate when no load is applied or during no load conditions. All clamps are proof tested prior to shipment.

WARNING: Plate Clamps

Use the proper size clamp for the load. Lift only one plate at a time when using vertical plate lifting clamps. See the manufacturer's manual for additional warnings.

Pallet and Adjustable Load Lifters

These lifters allow the user to convert an overhead crane into a lift truck to handle palletized loads. No slings or chains necessary. Pallet lifters have 48" throat height, adjustable load lifter has 40 11/16" min., 52 11/16" mid., and 64 3/16" max. throat heights. Meet ASME B30.20 Standards.

Load Indicators, Crane Scales, and Crane Dynamometers

No. 49P426

No. 22F450

No. 3EKX3

No. 3EKW7

Crane dynamometers are load indicators used to measure hanging loads. Search products on Grainger.com® for more information.

TRACTEL

Load Indicators, Wireless Base Layer—Precision force sensors measure forces and indicate loads. Accuracy: ±0.2%.

Load Indicators with Remote Display—Load indicators measure hanging loads (lb./kg) and tensile forces (N). Accuracy: ±0.1% (Nos. 22F449–22F450) and 0.2% (Nos. 22F443-22F444).

Crane Scales, LCD—Designed to quantify hanging loads (lb.) in industrial environments. Accuracy: ±0.2%.

RON CRANE SCALES BY EILON ENGINEERING

User-selectable units of measure and calibration.

Crane Dynamometers with Wireless Remote—Programmed to ensure that received and indicated values are identical to transmitted value. Long transmission range up to 450 ft./150m.

Crane Dynamometers with Wired Remote—Remote indicator reads measured data on all models up to 300t.

Crane Scales with Wireless Remote—Cage protects against external shocks. LCD with remote IR control.

Lifting Magnets

MAG-MATE®

Require no electricity to operate.

PowerLift® Rare Earth—Reduce the chance of dropping a load due to a power failure. On/Off magnet with a locking system ensures that the magnet is ready. Magnets can be used on flat or round surfaces. For handling steel plates, billets, blocks, and containers. RFID enabled. 3:1 design factor. Meet ASME B30.20 Standards.

BASICLIFT™—Full-width cam releases angle iron or strip steel. Stainless steel casings. Large lift lug accommodates most crane hooks. Max. temp.: 300°F. 2:1 design factor.

Creative Lift® Ceramic—Nonmarring roller cam release requires less torque to release parts. Max. temp.: 300°F. Rust- and chip-resistant stainless steel casing. For thick nonflexing metal. 3:1 design factor. Meet ASME B30.20 Standards.

Trigger Lift®—For removing hot metal parts from cutting tables. Max. temp.: 300°F 1-handed trigger release. Lightweight aluminum housing.

Sheet Handlers—Lift or move stacked steel plates. 1 sheet at a time.

Power Grips—Securely grip steel plates, sheets, or parts. Loop handle makes it easy to move items.

Parts Retriever—A T-handle makes it easy to release parts after retrieval. For use where small parts need to be counted or collected.

Grip Sticks—Reach tight spots with long straight end or 10° angled end. Lightweight aluminum shaft with interchangeable grip and magnet.

Salvage Magnets—Suitable for use in both wet and dry environments for coating, stripping, plating, and chemical operations.

Sheet Fanners—A magnetic field separates the steel sheets. Fanner height should be 2" to 3" higher than the stack.

Manhole Cover Lift System—Combined dolly with magnets to eliminate the need for pry bars when handling manhole covers or lids. Dolly adjusts to lift most manhole covers or lids.

VERSALIFT™—On/Off magnet with test feature. Can be used on flat or round surfaces. RFID enabled, supports custom pole shoes. 3:1 design factor.

ERIEZ

Lifting Magnets

Safely lift and transfer steel and iron without slings, hooks, or cables. Use individually or in series with a spreader beam. Capacity is lower on thinner materials. Paint, coatings, scale, or other materials on the contact surface may significantly reduce holding power. Conform to ASME B30.20.

For more information on Eriez® Lifting Magnets, see documentation on Grainger.com®.

SafeHold® Manual On/Off—Permanent, 2-pole magnets lift round and flat materials without electricity. Include hook bale.

SafeHold® Automatic On/Off—Suitable for lifting flat materials from burn tables and where access is limited. Permanent magnets; no electricity required. Turn on or off automatically each time they go through a full lift cycle. Include lifting eye.

Selecto® Electric—Lift/Off/Drop switch is top-mounted. Magnetizing requires 115VAC electric power. Includes lifting eye.

Permanent Lifting Magnets

Lightweight, small-volume magnets are easy to transport, provide a more effective use of available floor space, and increase stacking height. Large, heavy pieces can easily be moved by one operator. Can be used with both flat and round components. Stable structure is made with high-energy rare earth NdFeB magnets. Use with spreader beam to handle long plates, pipes, or bars.

WMHR

Hoist Rings

PIVOT-ONLY

Rings are built with forged chrome moly steel, with black oxide finish. Heat-treated and pivot 180° under load. 6:1 design factor.

EN-GUARD™ ENHDHR

Desinged with 4140 alloy steel. Corrosion-resistant electroless nickel finish. Serialized; disassemble and reassemble for easy inspection. Rings bolt-on and swivel 360° and pivot 180° and have 5:1 design factor.

HDHR AND HDHR-METRIC

Rings feature forged 4140 alloy steel with black oxide finish. They have individual serial numbers. Bolt-on and swivel 360° and pivot 180° under load. 5:1 design factor.

SEHR, SEHR-METRIC, AND SEHRSS

These rings are serialized, bolt-on, and feature 5:1 design factor. They swivel 360° and pivot 180° under load. SEHR and SEHRM rings are designed with 4140 alloy steel and black oxide finish. SEHRSS are designed with 300 series stainless steel.

WMHR

4140 alloy steel construction with black oxide finish. Welded and swivel 360° and pivot 180° under load.

† Magnetic particle inspected per ATSME 1444. # Complies with ASME B30.26

Hoist Rings

RUD

Heat-treated alloy steel with a high-visibility fluorescent pink powder coating that permanently changes color at increased temperatures. The color changes to a deep black with small bubbles if the chain/component reaches 752°F to indicate overheating. Attach to machinery or static loads to lift, move, or position with a lifting sling. 100% electromagnetic crack detection according to EN 1677, except INOX-STAR and VLBG-Plus.

WARNING! Working load limit of an assembly is determined by the component with the lowest working load limit; do not exceed.

BOLT-ON

Swivel load rings maintain working load limit (WLL) during lift without unintended loosening and adjust to the load direction.

Powerpoint®—Universal connection for hook-and-ring assemblies, round sling, loop, endless sling, and more. Double ball bearing enables friction-free turns, swivels, and tilts. Maximum working load limit (WLL) with smallest thread diameter.

Starpoint®—Swivel eye bolt rotates 360°, adjusts to the direction of the pull, and allows for full engagement of the bolt. Come with tightening key.

Starpoint® Eye Nuts—Pivots 360° for an easy adjustment in load direction. Can be side-loaded when adjusted to the correct plane. Available in metric sizes. Safety factor: 4:1.

INOX-STAR Eyebolt—Stainless steel eyebolt pivots 360° in load direction. Body and bolt are designed with Duplex Steel 1.4462 that offers high resistance in sea water and in environments with a high concentration of chlorine ions.

VLBG—Engineered with lifting points that pivot 360°; foldable suspension ring pivots 180°. Designed with a captive, but exchangeable, 100% crack-tested bolt and clear marking of the minimum WLL for all loading directions. Safety factor: 4:1.

VLBG-Plus—360° swivel hoist rings with typically higher working limit in all directions. Bracket adjustable in force direction.

VWBG-V—Double ball-bearing hoist ring is designed for heavy loads which need to be twisted and turned. Pivots 360° so it can be loaded in all directions. 100% crack-tested with a 4:1 safety factor.

Grab Hooks

B/A PRODUCTS CO. YOKE Safety is our first priority™

Excellent for use with chain-to-chain hooking, over-the-road safety chains, vehicle stailization, and general applications in place of slip hooks. Grade 70 and 80 Steel feature a Twist Lock™ grab hook design which prevents accidental release of chain from hook connection and also prevents inadvertent rehooking. Yoke features supporting wings to prevent chain link deformation.

Crosby® Slip Hooks

Ideal for applications requiring chain or cable to pass through the opening without binding. Forged hooks are quenched and tempered providing maximum strength without excessive weight and bulk. Deformation indicators help determine if throat opening has changed indicating abuse or overload. Angle indicators indicate the maximum included angle which is allowed between 2 sling legs in the hook. These indicators also help approximate other included angles between 2 sling legs. Swivel hooks help prevent tangling and help with positioning during connection. Alloy steel hooks are designed with a 4:1 safety factor; carbon steel are designed with a 5:1 safety factor. Replacement safety latches are available on page 1071.

Grade 30 Proof Coil Chains

Grade 43 High Test Chain

Grade 70 Transport Chain

Grade 80 Lifting Chain

Straight Chains

Grade 30 Proof Coil— Constructed of low-carbon steel for light- to medium-duty use.

Grade 43 High Test—Steel chains have greater tensile strength than proof coil. Use as binder chains for securing loads.

Grade 70 Transport—High-strength, heat-treated chains offer durability for securing loads. Gold chromate finish.

Grade 80 and 100 Lifting—Made from heat-treated alloy steel for overhead lifting and towing applications.

GA GRAINGER APPROVED Dayton

General Utility Chains

Durable, welded-steel links are for use as barriers or tailgates in addition to other applications where low-tensile strength is required. They are zinc-plated for corrosion resistance. Do not use utility chains for lifting. Meet NACM Standards, except Double Loop Link and Jack Link Chains.

Trade Size	L	Working Load Limit	Finish	Brand	Item No.

Chain Slings

Durable metal ID tag is attached to each sling.

Note: See Grainger.com® to view sling capacities for the lowest angle at which slings are rated for use.

Grade 63 Stainless Steel— Chain and components are rated for overhead lifting. Not for temperatures over 650°F.

Grade 80 Alloy—Manufactured from alloy steel and engineered for superior strength, lightness, and durability. Chain is embossed with Grade 80.

Grade 120 Alloy—Workload limits are up to 50% higher compared to G80. Lighter in weight when you downsize your sling, with higher design factors and improved wear resistance when used at Grade 80 workload limits.

Load capacity @ 60° angle.

Dayton™ LiftAll® pewag®

Adjustable Chain Slings

Handle odd-shaped, hard-to-position loads using either 1- or 2-point lifts. Proof tested and supplied with certificate of test. Ideal for use where headroom is limited, with portable hydraulic cranes and balanced or unbalanced loads.

Note: See Grainger.com® to view sling capacities for the lowest angle at which slings are rated for use.

Grade 100 Alloy—+25% WLL compared to G80. Pewag chain slings include integrated "XK" shortening hook to adjust chain length. Heat resistant to 400°F. Meet the 20,000 cycle ASTM Standard fatigue test for G100.

Load capacity @ 90° angle.

Warning! *Do not exceed sling capacity. Sling capacity for an assembly with multiple slings is equal to the lowest sling capacity of the slings in the assembly. Chain slings should never be used at angles lower than the lowest angle for which they have a rated sling capacity.*

Endless - Type 5

Universal Link - Type U

Attached Eye Cargo Basket - Type 9

Flat Eye and Eye - Type 3

Nylon Web Slings

- Nylon webbing is recommended for general purpose lifting
- Red core warning yarns indicate wear for easy inspection and replacement
- Required tags show rated capacities and material type
- Meet OSHA 29 CFR 1910.184 and AMSE B30.9 Standards

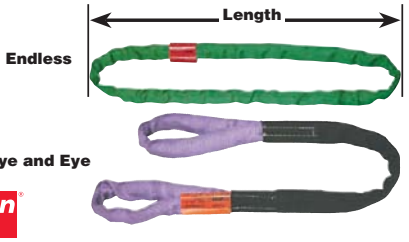
Endless–Type 5—Versatile slings economically priced for use in all three types of hitches: vertical, choker, and basket. Spread sling legs for improved load balance. Sling rotates to minimize wear.

Flat Eye and Eye–Type 3—Popular slings for use in all three types of hitches. Easier to remove from beneath the load than sling Types 1, 2, and 4.

LiftAll® PRODUCTS FOR BETTER LIFTING

STREN-FLEX® STRENGTH & FLEXIBILITY IN LIFTING

Reverse Eye–Type 6—Features reinforced eyes and wear pads on both sides of body and eyes for maximum wear resistance. Butted edges are sewn together to double the sling width.



Twisted Eye and Eye–Type 4—Similar to Type 3 except eyes are turned 90° and nest easily on the crane hook.

Universal Link–Type U—Helps extend sling life by protecting webbing from abrasion on rough crane hooks. Features Unilink fitting with Web-Trap on each end for use in three hitch types. Unilinks allow choking from either end to help vary wear points.

Attached Eye Cargo Baskets–Type 9—Light-duty basket sling has a wide body for load stability.

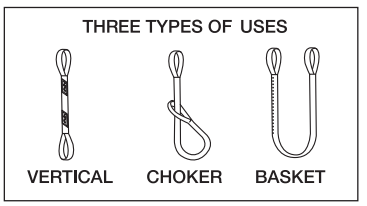
Dayton

LiftAll

Polyester Round Slings



- Color-coded for quick identification
- Sling flattens against load to grip tightly
- Only 3% stretch for better load control

Load-bearing yarns protected by UV degradation and slings are resistant to grease and most acids. Wear points of all endless-style slings shift with each use for maximum sling life. Temperature range: -50° to 200°F. All load fibers protected by two woven covers. Eye and Eye style has an additional wear-resistant cover to extend sling life. Remove sling from service when red striped white core yarns are exposed. Meet or exceed all OSHA and ASME B30.9 Standards.

Twisted Eye and Eye - Type 4
Flat Eye and Eye - Type 3
Endless - Type 5

LiftAll

Poly Web Slings

- Woven surface yarns cover each side and carry a portion of the load
- Longitudinal core yarns carry the majority of load
- Red core warning yarns indicate damage
- Tuff-Tag™ provides serial numbered identification for traceability

Surface yarns are connected side to side to protect core yarns, but also position surface and tensile yarns to work together to support the load. Meet or exceed all OSHA and ASME B30.9 Standards.

Endless-Type 5—Versatile slings economically priced for use in all three types of hitches: vertical, choker, and basket. Spread sling legs for improved load balance. Sling rotates to minimize wear.

Flat Eye and Eye–Type 3—Popular slings for use in all three types of hitches: vertical, basket, and choker. Easier to remove from beneath the load than sling Types 1, 2, and 4.

Twisted Eye and Eye–Type 4—Similar to Type 3 except eyes are turned 90° and nest easily on the crane hook.

Universal Link-Type U—Helps extend sling life by protecting webbing from abrasion on rough crane hooks. Features Unilink fitting with Web-Trap on each end for use in three hitch types. Unilinks allow choking from either end to help vary wear points.

Wire Mesh Slings

LiftAll®

- Galvanized high-tensile steel mesh
- Use in basket or choker hitch
- Terminal thickness ½"

Use Roughneck 10-ga. wire mesh slings in metalworking or other industries where loads are abrasive, hot, or tend to cut web slings. Withstand temperatures to 550°F. Plated fittings fit most crane hooks.

Winch Selection Guide

Winch Rating—Pulling capacity or the "rated max. load" for a winch is determined by the max. load a winch can pull with only the first layer of rope on the drum, an industry standard. Full capacity is retained on the first two layers. This rating does not include any friction factors, which will vary according to the specific applications.

Pulling vs. Lifting—Unless specifically indicated, the winches featured are designed for pulling only. Winches may not have all of the features necessary for every lifting application. Winches rated for lifting are marked as such. Winches are not designed to meet hoisting applications. Refer to all ANSI/ASME requirements for specific applications. All of the winches featured are not to be used for lifting, supporting, or transporting people or loads over areas where people could be present.

Power—Most Dayton® electric and hydraulic winches have power "in" and "out". Some also have a clutch and/or freewheel feature.

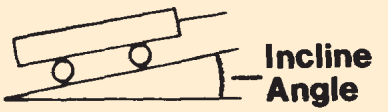
Duty Cycle—Unless specified otherwise, most electric DC and AC powered winches cannot be operated continuously. To do this will overheat and damage the motor. The typical normal duty cycle is 1 to 3 min. ON, followed by a 20-min. cool-down period. For more frequent operation needs, refer to long cycle or longer duty rated electric units, and continuous duty rated hydraulic winches.

ROLLING WEIGHT

Rated Line Pull (RLP)*	Grade 10%	20%	40%	60%	80%	100%
1000 lb.	5025	3401	2155	1664	1422	1285
1500 lb.	7538	5102	3233	2496	2134	1928
2000 lb.	10,050	6803	4308	2816	2407	2175
2500 lb.	12,563	8503	5388	4160	3556	3213
3000 lb.	15,075	10,251	6428	4991	4268	3854
3500 lb.	17,588	11,905	7543	5824	4979	4499
4000 lb.	20,100	13,668	8643	6655	5690	5138
4500 lb.	22,613	15,306	9698	7488	6401	5784
5000 lb.	25,126	17,009	10,776	8320	7112	6427
6000 lb.	30,151	20,408	12,931	9983	8535	7712
9000 lb.	45,226	30,612	19,397	14,975	12,802	11,568

* Most winch ratings are based on the first layer of wire rope on the drum. You could experience a loss of up to 13% pulling capacity per layer of wire rope (see example below)

Rolling Weight—For safe, sure loading, find the column in the table that matches your percentage of slope or grade. Determine the slope by dividing the amount of your rise by ramp length. Match the slope with the nearest weight of what you may be pulling, always round up, and locate the corresponding winch Rated Line Pull (RLP)*. This guide includes 10% rolling friction. Some applications may require larger capacity winches than indicated. To convert lb. to kg. multiply by 0.4536.



- **A 10% grade is a rise of 1 ft. in 10 ft.**
- **Winches are not intended as a load securing device**
- **Secure load with appropriate tiedowns**

ROLLING LOAD CAPACITY

Maximum Pull Capacities For Rolling Type Loads at Various Angles of Inclines

Percent Incline	Multiply by:	Percent Incline	Multiply by:
Level Surface	10	30 (17°)	2.61
5 (3°)	6.67	50 (26°)	1.86
10 (6°)	5.02	70 (35°)	1.53
20 (11°)	3.4	100 (45°)	1.29

To calculate the rolling load capacity of a winch (the amount of load that can be pulled up an incline), multiply the rated capacity, single or double line, by the factor shown in the chart at the left. Multiplication factor shown includes a 10% rolling friction factor; actual friction factors may vary.

Example of the effect of each layer of cable drum wind on Rated Line Pull (RLP) and rolling loads for a 5000-lb. capacity winch. RLP-The weight the winch can pull perpendicular to the ground with a single line on the first layer of wire rope on drum.

5000 lb. Capacity Winch	RLP	10%	20%	40%	60%	80%	100%
1st layer	5000 lb.	25,126	17,007	10,776	8320	7112	6427
2nd layer	4231 lb.	21,260	14,390	9118	7040	6018	5438
3rd layer	3667 lb.	18,426	12,471	7902	6101	5216	4713
4th layer	3236 lb.	16,258	11,004	6972	5383	4602	4159
5th layer	2894 lb.	14,547	9846	6239	4817	4118	3721

When to Consider a Pulley Block— If you need to offset the winch but retain a straight shot, a pulley block lets you, with a hook for mounting and a pulley for the wire rope. A pulley block also adds to the winch's pulling capacity; simply attach the pulley block's hook directly to the load and the winch's hook to a sturdy mount nearby.

Electrical Performance—To maintain electrical performance from a battery to the winch, it is recommended dropping three wire sizes for every doubling of the length of the standard wire harness. Example: No. 6 to No. 3 or 2 ga.

FEATURE EXPLANATION FOR CHARTS

1. Clutch Release—Ability to control release of a load with a clutch instead of a winch motor.

2. Freewheel—Ability to pull cable freely from the winch drum by hand under no load conditions.

3. Pulley Block—For double line winch operation and pull redirection. Doubles pulling capacity of winch, but results in lower speed, lower amp draw, and longer run time.

4. Mechanical Brake—Friction within the winch gears or separate friction brake device which automatically holds the load in position when the power switch is released.

5. Dynamic Brake—Electromechanical stopping and holding of a motor that holds a load only when there is power connected to the winch.

TYPES OF GEARING

Planetary Gearing—Has a coaxial shaft capable of large reductions in a small space. Capable of handling high bearing loads.

Worm Gearing—Has right-angle shafting, requires only two gears, and is self locking. Generally provides high ratios.

Spur Gearing—A simple gear design using two or more parallel shafts with gears operating in the same plane. Produces less friction than worm or planetary gearing for greater efficiency. Requires a braking system.

Find more information on winch selection on page 1080.

Medium-Duty

Premium Truck

Heavy-Duty Truck

Heavy-Duty

12/24VDC Electric Winches

Versatile wenches for a variety of pulling tasks.

Utility—No. 29JU84 is ideal for use on trailers or hitch mounts. Easy-to-use clutch lever and corded remote control. Use No. 29JU85 for trailers or the jobsite. Includes durable steel rope, roller fairlead, and remote control.

Medium-Duty Truck—Cone brake holds the full-rated load for trucks and SUVs. Features low-profile design with separate control box. Chip-resistant, powder-coated finish.

Premium Truck—Built to last. Offers durability, style, and performance for trucks, Jeeps, and SUVs. Premium components. Full IP68 waterproofing. Rated to 408 hr. in rigorous salt-spray tests. Large dia. drum for durable rope attachment and long rope life. Convertible control pack for upright or low-profile mounting.

Heavy-Duty Truck—Handles the heaviest winch loads. Features cone brake and chip-resistant, powder-coated finish to resist corrosion. Nos. 3EXT2 and 16Y217 include remote-mount control box. No. 3EXT3 has thermometric indicator for feedback via LED on remote control.

Powersport Winches—All-metal construction with advanced digital controls, built-in load limiter, and clutch design. IP68 waterproof sealing. Modular controls for expandability. Standard-duty permanent magnet motor on Nos. 492P72 to 492P77. Use on ATVs and 2-person side by sides. Nos. 492P78 to 492P84 feature Motactor™ (motor + digital contactor) which simplifies winch installation and increases performance. Ideal for ATVs and 4-person side by sides.

No. 1VN80

THERN

115VAC Worm Gear Winches

Power "In" and "Out" with 15 min. of continuous "On" time at full load. Internal mechanical brake provides positive load control for lifting and lowering. Ball bearings and self-aligning bronze bearings provide smooth operation. Corrosion-resistant, cast-aluminum gearbox and drum. Single-phase motor has power cord and push-button control. Winch cable is available separately.

No. 2ZU40 features high-speed direct drive, and includes 8-ft. pendant cord. No. 1VN79 may be permanently installed in industrial settings. No. 1VN80 has handles and large wire rope storage.

WARN StrongArm

AC Electric Winches

Include power In/Out. Pulling capacity given as a reference only and does not include friction factors that will vary according to specific applications.

Note: Not recommended for outdoor use or areas where units could get wet. Should be used with a ground fault circuit interrupter.

PLANETARY GEAR

All-steel, high-speed winches have prewired remote on 6-ft. cable with cable tension plate. Includes mounting bolts.

SPUR GEAR

Dutton-Lainson StrongArm models are rugged, high-performance winches with efficient spur gear systems. Pulling capacities are based on third layer of cable rather than the first for a more realistic estimate of actual use. Precision needle bearings provide low friction and longer life. Final drive gears are heat-treated carbon steel for greater strength. Dynamic motor brake and friction brake for load holding. High-impact cover and stainless steel front plate completely enclose cable drum. Factory installed, 10-ft. remote control cord.

LiftAll® Dayton®

Winch Cables and Winch Strap

Winch Cables—For use on manual and electric winches. Bright winch cables feature carbon steel wire construction. Winches constructed from Galvanized steel help resist corrosion in demanding applications. Stainless steel winch cables are for use in corrosive environments.

Vehicle Tow Cable—Assembled with hooks at each end for easy use. Corrosion-resistant. Includes hook-and-loop cable straps and forged hooks. Do not use for lifting. 2"W.

Vehicle Recovery Straps—Light polymer/nylon fabric eases storage and application. Cut- and abrasionproof straps are for use in all types of weather. Internal warning markers indicate when replacement is necessary.

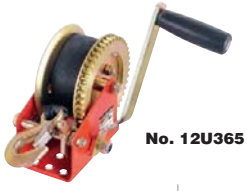
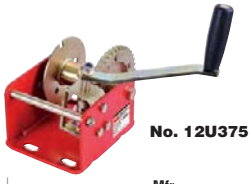
THERN

Industrial-Duty Hand Winches



- Cable sold separately



Adjustable-length handles to change the force required to lift or pull a load. Use bronze and ball bearings.

Spur Gear with Brake—Automatic Weston-style brake provides positive load control to assist with lifting and lowering.

Worm Gear—Provides load-holding capability when handle is released. Use in applications where fine adjustments may be necessary. No. 2ZU39 is designed to be operated with 400 rpm max drill drive.

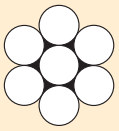
Dayton

Hand Winches

- Cable sold separately
- Some models include winch strap with sewn-in hook

Feature a corrosion-resistant frame, with a rubberized handle grip for added comfort. Floor- and wall-mounted options available.

Spur Without Brake—Designed for applications where it may be necessary to pull the line freely from the winch. Manual ratchet locks the load in position; winch will freewheel with the ratchet released. Not recommended for lifting applications.

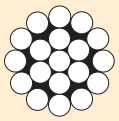


Spur With Brake—Designed for applications where freewheeling is not a requirement. Self-activating disc brake system holds load when the handle is released. Include a guard for the brake.

Worm Gear—Provides load-holding capability when handle is released. Use in applications where fine adjustments may be necessary.

Cable Selection Guide

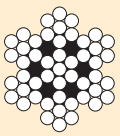
CONSTRUCTION



1 x 7 Strand

Attributes—Provides excellent abrasion resistance with low flexibility and low stretch.

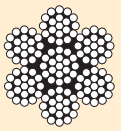
Applications—Used as guying wire, tensioning members, and for applications with straight pulling and pushing requirements.



1 x 19 Strand

Attributes—Provides excellent abrasion and compression resistance with limited flexibility.

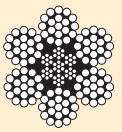
Applications—Used as guying wire and as tensioning members with pulling and pushing requirements.



7 x 7 Strand

Attributes—Provides excellent abrasion resistance with good flexibility. Best for strength and flexibility.

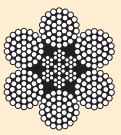
Applications—Can be used over small-diameter pulleys and also used as control cable for equipment.



7 x 19 Strand

Attributes—Excellent flexibility, strength, and greatest amount of stretch. Resistant to crushing.

Applications—Can be used over small-diameter pulleys and also used as control cable for equipment.



6 x 19 Class IWRC

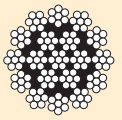
Attributes—Provides abrasion and crush resistance with excellent flexibility.

Applications—Logging ropes, choker rope, rotary drilling, and cable track lines.

6 x 37 Class IWRC

Attributes—High strength, extremely flexible, and excellent fatigue resistance with super flexibility. Lower abrasion resistance.

Applications—Winch lines, cranes, and towing.



6 x 42 Fiber Core

Attributes—Balanced combination of abrasion and fatigue resistance for machinery operation.

Applications—Winch lines, cranes, and towing.

19 x 7 Strand Core

Attributes—Provides rotation resistance with superior flexibility. Susceptible to crushing and kinking. Extra care must be exercised when using cable.

Applications—Lifting and pulling applications.

MATERIAL TYPES

Galvanized

Galvanized steel provides some corrosion resistance and is an economical alternative to stainless steel.

302/304 Stainless Steel

Good corrosion resistance and more economical than 316 stainless.

Fiber Core

Provides support while remaining flexible. More susceptible to crushing.

Nylon-Jacketed

Provides high flexibility and abrasion resistance. Typically used for drive cables and physical fitness equipment.

Vinyl-Jacketed

General purpose PVC provides high flexibility and superior appearance. Typically used as barriers and lanyards.

Polypropylene-Jacketed

Polypropylene impregnated and coated galvanized steel.

Wire Rope Sleeves

No. 1DLE3

No. 16X825

No. 2VKD3

Generate professional-quality loops with a clean look. When used appropriately and swaged accurately, sleeves allow 100% cable strength. Tin-plated copper sleeves are designed for use with stainless steel cable. Stainless steel oval sleeves provide maximum corrosion resistance.

Crosby® Terminator™ Wedge Sockets

No. 29WR30

- Meet ASME B30.26 requirements

Sockets secure the tail of the wire rope to the wedge to eliminate wedge loss and the need for an extra piece of wire rope. Also eliminate potential breaking off of the tail from fatigue. Pin diameter and jaw opening allows wedge and socket to be used in conjunction with closed swage and spelter sockets.

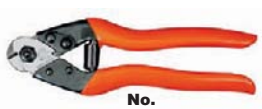
Swaging Tools

- For oval- and stop-sleeve swaging
- Heat-treated steel jaw
- Used for making loops and splicing cable
- Easily provide accurate cutting and crimping



Hand Swaging Tools—Single-compression die, except No. 12R355 is multi-compression. Nos. 12R359 and 12R360 are scissor-action type. No. 12R375 is a hydraulic compression tool; includes interchangeable dies and packaged in a plastic carrying case. Include test gauge.

Bench Swaging Tool—For shop location and permanent workstations. Fully adjustable. Multicompression jaws. For copper and aluminum only. Includes test gauge.

Hand Swager/Cutter—Designed for use with cable up to 3/16" thick. Hardened steel jaws allow tool to taper as it cuts, leaving evenly cut ends.

Hand Swaging Kits—Kit Nos. 12R364 and 12R365 include Hand Swaging Tool No. 12R355, cable cutter, and an assortment of sleeves, thimbles, and stops. Packaged in a steel tool box. No. 12R364 has aluminum sleeves and zinc-plated steel thimbles; No. 12R365 has copper sleeves and stainless steel thimbles. Kit No. 12R376 includes Hand Swaging Tool No. 12R375 and 6 sets of dies and gauges. Packaged in a plastic case.

Wire Rope Blocks and Sheaves

Forged fittings with zinc finish are weather-resistant and riveted to the all-steel sheaves. Suitable for use with heavy-duty wire rope and aircraft cable in high-load and medium-speed applications. Bronze bearings are self-lubricating.

Warning: Do not exceed recommended work load limit of cable/block.

Forged Galvanized Steel Turnbuckle Body - No End Fitting

Eye & Eye Fitting

Jaw End Fitting

Turnbuckles

Turnbuckles quickly tighten and loosen chain and wire rope, providing secure connections with the precise tension required. When ordering components, order 1 body and 2 ends (1 left-handed thread and 1 right-handed thread) to make a complete unit.

WARNING: Do not exceed working load limit. Working load limit of an assembly is determined by the component with the lowest working load limit.

Chicago Hardware & Fixture Company

Turnbuckles and Swivels

Turnbuckles are made with USA steel for full traceability. Aluminum midget turnbuckles are corrosion-resistant for light-duty applications. Safety snap hooks are forged carbon steel with stainless steel latch, spring, machine screw, and nut; vertical loads are based on a safety factor of 5:1. All swivels are heat-treated and hot-dipped galvanized for corrosion resistance. Drop-forged turnbuckles, except stub ends, meet performance requirements of ASTM F1145, Type 1, Grade 1 Standards for heavy-duty tensioning applications.

Adjustable S-Beam Trolleys

Intermediate and control box trolleys include 4 steel ball bearing wheels. S-beam trolleys are economical, durable, and expandable. Festoon cable trolley runs on various size S-beams (S3 x 5.7, S4 x 7.7, S6 x 12.5). These trolleys roll on 4 steel ball bearing wheels that have a static load capacity of 1000 lb. each. This provides a rolling capacity of 154 lb. at 262 ft. per minute. Multiple cable saddle configurations provide a variety of cable carrying options for single or dual flat cable or round cable.

Baling and Safety Wire

- Packaged in spools, except as noted.

No. 16X974 – Spool

No. 16X997 – Coil

No. 16Y047 – Canister

ALUMINUM WIRE
- Grade 1100 soft temper
- Max. tensile strength: 15,500 psi

This 99% aluminum wire is lightweight, matte finish, offers good electrical conductivity, and is fair with corrosion resistance applications.

GALVANIZED ANNEALED WIRE
- Grade 1008-1010 soft temper
- Max. tensile strength: 75,000 psi

Galvanized wire has better corrosion resistance than matte and oil-finished wire.

BLACK ANNEALED WIRE
- Grade 1006-1008 high-carbon wire
- Max. tensile strength: 65,000 psi

Designed for baling, stove, or pipe wire. Ranges in color from dark gray to brown.

STAINLESS STEEL LOCKWIRE
- Grade 302/304 soft temper
- Min. tensile strength: 75,000 psi

Commonly used as safety-lock wire in food processing and chemical environments.

INCONEL WIRE
- Grade 600 soft temper
- Max. tensile strength: 115,000 psi

Nickel wire is frequently used as a safety-lock wire in harsh environments.

MONEL WIRE
- Grade 400 soft temper
- Max. tensile strength: 85,000 psi

Nickel wire is often used as a safety-lock wire in acidic environments. Provides good corrosion resistance.

Baling Ties and Wire

COASTAL WIRE COMPANY

Painted ties combine the clean handling of a galvanized tie with the ease of tying associated with black annealed ties. Paint coating does not peel or flake. Wire features 65,000 to 70,000 tensile strength with a minimum of 25% elongation.

CONSTRUCTION

Twisted—Also known as 3-strand. Available in a wide variety of fibers for general purpose uses. Can be easily spliced.

Knit Braid—Braided jacket, usually lightweight and economical. Ideal for applications that require the rope to stretch.

Braid/Solid Braid—Firm, round rope with lock-stitch construction. Maintains shape under load, making it ideal in blocks or pulley applications. Cannot be spliced.

Hollow Braid—Constructed of 8, 12, or 16 strands. Used in marine applications. Can easily be spliced.

Double Braid—Solid braid core covered by a braided jacket. Torque free and nonrotational. High strength, can be easily spliced.

Diamond Braid—Constructed by braiding fibers to form diamond shapes. Rope is often flat or box-like and very easy to splice.

FIBER

Composite—Blend of polyester and polypropylene. Stronger and better resilience to UV rays and other corrosives. Firmer than traditional polyester rope.

Natural Fiber (Cotton, Jute, and Manila)—Knots well and has good abrasion resistance, but not as strong or durable as synthetic fibers. Cotton must be kept dry, and has low resistance to rot, mildew, oils, gas, grease, and chemicals.

Nylon—Excellent shock absorption. It stretches, is rotproof, and resistant to UV rays, oils, gasoline, grease, and nonacidic chemicals.

Polyester—Minimal stretch and high strength. Rotproof and resistant to UV rays, oils, gasoline, grease, and nonacidic chemicals.

Polypropylene—Lightweight, economical fiber, can be made in many colors and floats. Should not be exposed to UV rays or high heat.

SNAPBACK SAFETY WARNING: A dangerous situation occurs if personnel are in line with a rope under tension. Should the rope fail, it may recoil with considerable force. Death may result. Warn people against standing in line with the rope or its bight. To help ropes last longer: AVOID overloading, abrasion, sudden strain, kinks, sharp angles, chemicals, and improper storage. Use correct size rope for job, reverse ends of rope, and keep rope clean.

Twine

Use for a variety of light-duty bundling and binding applications.

Natural Fiber—Including cotton and jute, is biodegradable and has a slightly lower cost. Excellent for parcel shipping, meatpacking and food service, and sewing applications.

Synthetic—Including nylon and polypropylene, offers high resistance to abrasion, rot, mildew, and chemicals. Commonly used in more demanding applications, such as lumberyard binding and bundling, manufacturing, and fishing.

Rescue Rope

STERLING

HTP Static Rope—100% High-Tenacity Polyester (HTP) kernmantle construction gives this rope extremely low stretch and excellent durability, making it ideal for tower construction, raising systems, and industrial safety projects. Polyester also resists moisture and UV degradation. Certified to NFPA 1983:2012.

SuperStatic2—High-angle, technical rescue rope designed for rescue system mainlines and belays. 41/59 sheath/core ratio. Ideal for all types of technical rescue, confined space rescue, USAR, and industrial safety applications. 100% nylon, low-stretch kernmantle certified to NFPA 1983:2012.

Temporary Floor Protection Board

Reinforced Kraft Paper

Plasticover™ TRIMACO Floor and Multisurface Protection

Floor Protection Film—Temporary, self-adhesive film protects multiple surfaces including tile, vinyl, hardwood, VCT, laminates, marble, granite, countertops, and factory-finished hardwood. Applies quickly and removes easily. Can be left in place for up to 60 days.

Reinforced Kraft Paper—Nonadhesive, waterproof, tear-resistant paper can be taped down to protect virtually any surface. Heavy-duty kraft paper is bonded with polyethylene and reinforced threading provides durability for long-term usage.

Temporary Floor Protection Board—Nonadhesive fiber paper board protects against scratches and impact. Recycled content may qualify builder for LEED points.

GA GRAINGER APPROVED MAURITZON

STANDARD-DUTY POLYETHYLENE

- Resist UV rays, mildew, and tears
- Rustproof aluminum grommets approximately every 36"

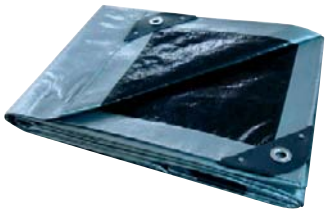
Made from high-density 10 x 10 weave (1000 denier). Lightweight fabric weighs only 3.4 oz. per sq. yd., wet or dry. Seams are heat-sealed with polyethylene rope-lined hems.

Flame-resistant style will not support combustion.

HEAVY-DUTY POLYETHYLENE

- Superior resistance to UV rays, water, mildew, and tears
- Rustproof aluminum grommets approximately every 18"
- Reinforced corners

Made from super-strong 5.4 oz. per sq. yd. heavy-gauge material. Durable 14 x 14 weave (1000 denier).



WATERPROOF VINYL

- Superior resistance to UV rays, tears, and water
- Nickel-plated brass and D-ring grommets approximately every 24"

Lighter than canvas and nonabsorbent. Made from 13 oz. per sq. yd. material and suitable for long-term outdoor use covering trucks, boats, and equipment.

Fire-resistant style will not support combustion.

Heavy-duty models are made from 18 oz. per sq. yd. material for premium resistance to abrasion and punctures.

KEEPER PERFORMANCE ENGINEERED. GOLDLINE® GA GRAINGER APPROVED BULK-N-STRAP SUPPLIER DIVERSITY®

Bungee Cords and Hooks

EPDM Tarp Straps—For heavy-duty strapping jobs. Straps stretch to approximately 1½ times their original length. Extra reinforcement at hook ends. Zinc-plated steel hooks.

Industrial Bungee Cords—Work well in most tarp applications and with heavier loads. Nylon-coated cords have hardened hooks with yellow dichromate finish.

Adjustable Bungee Cord—For light-duty bundling or tie-down assists. Safety tab on polycarbonate hook prevents slipping out of tarp grommets. ¼'' dia. Length adjustable up to 36".

Bungee Cord Rolls—Multicolor bungee cords are general purpose. White cord is nylon-wrapped for greater durability

Bungee Hooks—Attach easily to make or repair cords. Includes clamping wire. Adjustable hooks require no tools to install. See hook descriptions for cord sizes.

THE BETTER BUNGEE™

Rope, Hook Ends, and Replacement Hooks

No. J4694

Solid Core Urethane Stretch Rope—Industrial strength, high-tech urethane stretch rope is a superior replacement to shock cord (no cloth or elastic) will not break, rot, or become brittle and maintains its stretch even under extreme weather conditions. Safely stretches two times its length. Make custom length bungee cords and cargo webs using the adjustable nylon hook ends.

Adjustable Nylon Hook Ends—Patented adjustable hook ends create safer and stronger custom bungee cords. Match hook sizes to rope size. ¼" hook has a 102-lb. break rating, 5/16" has a 140-lb. break rating.

Steel Triangular Replacement Strap Hooks—0.188" (3/16") galvanized or stainless steel hook with triangular S end, made for safer strap. Gale break rating of 250 lb. Stainless steel break rating of 225 lb.

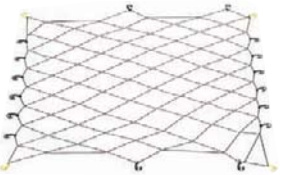
RopeRATCHET TIE-DOWN

Rope Tie-Downs



Secure a wide variety of loads quickly and easily.

Rope Ratchets—Keep rope locked in place for a firm hold; no webbing or bungee cords required. Thumb-lever provides easy release. Ratchets are made of 33% glass-filled nylon with interior of die-cast zinc and stainless steel springs. Hooks are zinc-plated steel.

Polyurethane Bungee Straps

Industrial strength polyurethane and heavy-duty hook ends make safer, stronger bungee cords and straps. High-tech, lightweight material will not break, rot, or become brittle when exposed to harsh weather elements, oils, or fuels.

Cords—Glass-filled nylon hooks are overmolded into a one-piece cord for superior performance and durability. Max. stretch is two times length. Hook ends have a 180# break rating. Synch cord has loop on one end and hook on the other.

Straps—High-tech industrial strength urethane straps have three types of hook ends to chose from: 2 0.188 (3.16) galvanized with a 250# break rating, stainless steel with a 225# break rating (both have triangular S-hook shapes) or fiber-filled nylon overmolded ends (rated at 180#) for nonmarring applications. Two times max. stretch. The slotted strap is very versatile as it will adjust to just about any size and comes with galvanized or overmolded nylon ends.

BULK STRAP

Custom Strapping, Buckles, and Fittings

CUSTOM STRAPPING

Create custom-length straps with no stitching required.

Nylon—Strong and flexible material has good elasticity and recovery. Absorbs moisture, dries easily, and is mildew- and insect-resistant.

Polypropylene—Material features excellent chemical resistance and low moisture absorption. Floats and is resistant to mildew and abrasion. For lightweight applications.

Polyester—Durable material is quick drying. Resists most chemicals, stretching and shrinking, wrinkles, mildew, and abrasion. For medium- and heavy-duty applications.

BUCKLES AND FITTINGS

Metal or plastic attach without sewing to make finished assemblies.

ANCHOR PLATES

Secure webbing to a solid surface. 1" plates have ¼" bolt hole. 1½" to 2" plates have ⅜" bolt hole. Webbing slots will accommodate 1", 1.5", and 2" webbing, offset at 128°.

PROGRIP CARGO CONTROL

Back-Off Technology Cargo Straps

Controlled-release cargo straps allow you to release one tooth at a time. Safe and easy to use, this step release action prevents sudden jerks that might cause a load to fall.

Light-Duty Rigid-Frame Skate Wheel Conveyors

ASHLAND CONVEYOR PRODUCTS

Conveyors allow users to move flat-bottomed, lightweight loads with reduced effort. Sections connect to build custom conveyor systems. Each section must be supported by compatible conveyor stands, sold separately. Conveyor section load capacity depends on the number and spacing of the support stands. Staggered wheel design.

Aluminum Frame—Lighter than steel for applications with frequent disassembly and reconfiguration of conveyors.

Galvanized Steel Frame—Stronger than aluminum, with better resistance to abrasion and impacts. For assembly lines, shipping departments, and stocking areas.

Note: A minimum of three axles and five wheels should be under the load at all times.

Medium-Duty Extendable Flexible-Frame Skate Wheel Conveyors

CONVEYORS
- Shipped assembled
- 200 lb./ft. max. load

Conveyors have accordion-style, flexible frames that stretch, curve, and contract to change conveyor shape and length. Conveyors collapse for compact storage. Skate wheels help move loads with firm, flat bottoms from one place to another with reduced effort. Adjustable legs can be raised or lowered to change the height of the conveyor from 28½" to 41½", or to adjust the slope. Swivel casters allow the conveyors to be rolled into position. Suitable for loading and unloading trailers, creating temporary assembly lines, and adding length to an existing conveyor.

CONVEYOR ACCESSORIES

Pivoting Package Stops—Stops can be raised to prevent items from falling off the end of the conveyor, or lowered to allow items to flow onto other conveyors and surfaces.

Replacement Connecting Hooks—Replace worn connecting hooks on compatible conveyor sections to avoid conveyor malfunction.

ASHLAND CONVEYOR PRODUCTS

Steel and Aluminum Roller Conveyors

Roller conveyors move loads along a downward slope, using gravity to reduce effort required in package handling, warehousing, dock, assembly, or inspection tasks. Rollers provide a stable surface for loads with rimmed or uneven bottoms. Loads can be pushed from side-to-side across the full width of the conveyors. Each section consists of rollers with axles attached to rigid frames. Roller conveyors typically offer more weight capacity than skate wheel conveyors. Sections must be supported by compatible conveyor stands, sold separately. Conveyor section load capacity depends on the number and spacing of the support stands.

Aluminum Frame—Lighter than steel for applications with frequent disassembly and reconfiguration of conveyors.

Steel Frame—Stronger than aluminum, with better resistance to abrasion and impacts.

LIGHT-DUTY

For moving low-weight and low-volume items such as pails and bags. Sections have hooks and pins that connect to create custom conveyor lines.

MEDIUM-DUTY

For moving medium-weight drums, pails, and pallets. Sections have butt plates on the ends that bolt together to create custom conveyor lines.

HEAVY-DUTY

For pallets, drums, and other heavy items. Sections have butt plates on the ends that bolt together to create custom conveyor lines.

EXTRA-HEAVY-DUTY

For very heavy items such as large pallets, castings, sheet metal, and metal bins. Sections have butt plates on the ends that bolt together to create custom conveyor lines.

ASHLAND CONVEYOR PRODUCTS

Telescoping Steel-Frame Roller Conveyors

Frame sections slide in and out to expand for conveying tasks or contract for moving and storage. They are suitable for loading and unloading trailers or adding length to an existing conveyor. Unlike flexible-frame conveyors, roller spacing does not change when telescoping conveyors are expanded or collapsed. Telescoping conveyors have adjustable leg height and can provide a slope that keeps items moving along the rollers. Loads weighing 5 to 40 lb. require a slope of 4" to 6" per 10 ft. For loads over 40 lb., a slope of 2" to 4" per 10 ft. is adequate.

Overall Width	Between Frame Width	Min. Length	Max. Length	Roller Spacing	Load Capacity @ 10 ft. Centers	Roller Dia.	Item No.

Conveyor Rollers

ASHLAND CONVEYOR PRODUCTS

Replacement rollers support and move bulky items on roller conveyors and material transport stands. They help reduce the effort required to move loads.

Lightweight—Commonly used in unpowered (gravity-flow) conveying applications.

General Purpose—For light-duty and medium-duty unpowered (gravity-flow) conveying tasks in warehousing, package handling, manufacturing, and distribution applications.

Corrosion Resistant—Stainless steel conveyor rollers can withstand frequent washdowns, high humidity, exposure to corrosive chemicals, and other harsh conditions that might corrode steel or aluminum rollers. Suitable for conveying applications in facilities that process food, chemicals, or pharmaceuticals.

Sprocketed—For moving heavy items such as pallets, drums, and bulk containers on heavy-duty chain-drive conveyors. Sprocketed rollers have teeth that engage with the drive chain to prevent slipping in dirty or oily conditions.

High Performance—For high-speed conveying tasks on powered conveyor systems in warehousing, transportation, and sorting operations.

High Durability—Have a higher weight capacity and provide more resistance to impact, shock, and abrasion than general purpose steel rollers. For conveying heavy loads such as pallets, drums, and castings.

Nonmarring—Covered with smooth plastic to prevent damaging delicate surfaces or finishes on conveyed items, such as glass or paint. They are quieter than rollers with metal surfaces, and they also provide better traction.

Conveyor Roller Bearings

Replace worn or damaged bearings to repair seized rollers and prevent conveyor downtime or malfunction. Sealed bearings prevent dirt and moisture from causing damage and malfunction in wet, humid, dirty, or hot conditions. Close-tolerance bearings fit tighter than general purpose bearings to spin more freely and at higher speeds.

Surface Mount L-Shaped Conveyor Mounting Brackets

ASHLAND CONVEYOR PRODUCTS

Bolt-on, steel construction allows conveyor rollers to be mounted without a conveyor system. L-brackets are commonly used to build custom conveying racks and stands for supporting and moving materials in sawing, machining, and metalworking operations. Mounting hardware sold separately.

VINYL GUARD®

Heat Shrink Conveyor Roller Covers

Tubing shrinks via heat gun to fit tightly over straight and tapered rollers. Protects delicate surfaces and reduces noise and vibration. Resistant to abrasion, chemicals, oils, grease, acids, chlorinated cleansers, moisture, and corrosion. Easy to clean. Nos. 49U108 and 49U109 are made from elastomer, which grips conveyed items as they pass over the roller and prevents them from slipping on the conveyor.

Flow Rails

ASHLAND CONVEYOR PRODUCTS

Each straight flow rail has a single row of skate wheels, ball transfers, or rollers to guide cartons, totes, pallets, and other flat-bottomed items in conveying applications. Multiple flow rails can be installed side by side to create a flow rack, and they can also be mounted to surfaces, floors, or walls. Skate wheels attach to channel shapes or angles.

Note: Recommended 3-wheel min. under load.

Ball Transfer Table (H-Stand Sold Separately)

Ball Transfer Insert

Ball Transfer Tables

- Steel ball construction
- H-stands sold separately

Ball transfer tables have ball transfers attached to rigid frames. They allow flat-bottomed loads to roll from one place to another, reducing the effort required to move loads. Ball transfers allow loads to move in all directions, and are typically installed at the start and end of conveyor systems, or at points where loads need to change direction.

Note: The length and width of the smallest conveyed item should be at least three times the table's ball spacing dimension, and the heaviest conveyed item must weigh less than the combined capacity of the ball transfers supporting it.

BALL TRANSFER TABLES

Tables attach to compatible medium-duty roller conveyors and stands to allow conveyed items to move in all directions at transition points.

BALL TRANSFER INSERTS

Can replace rollers in light- and medium-duty roller conveyor sections. Inserts are plates with ball transfers attached.

Ball Transfers

Replace existing ball transfers in ball transfer tables, inserts, and stands, or use to create a custom conveying installation. Mount at conveyor entrances, intersections, or exits to reduce the effort required for moving loads in warehousing, package handling, manufacturing, and distribution applications.

Countersunk Flange Style—Each has a flanged mounting plate that installs into a countersunk hole for limited-space applications. They fasten from the front.

GA GRAINGER APPROVED ASHLAND CONVEYOR PRODUCTS

H-Style Conveyor Support Stands

Stands support conveyor sections and can be adjusted to create a level or sloped conveying surface. Pivoting mounting brackets allow sloped installations. Choose an H-stand based on between-frame (BF) dimension and duty rating.

Note: Range of adjusted height is to top of H-stand.

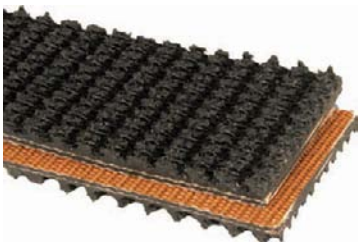
Note: For a stand-alone conveyor, a min. of two supports is required. For two sections of conveyor, a min. of three supports is required (the middle stand supports both sections).

STATIONARY SINGLE-TIER

Stands bolt to the floor to provide permanent support for powered or unpowered (gravity-flow) conveyors.

STATIONARY MULTITIER

Stands each have two tiers for gravity-flow skate wheel or roller conveyors. Can help create multi-level flow racks. Each level has adjustable height.



PORTABLE SINGLE-TIER

Stands have casters that make skate wheel and roller conveyor sections portable. Brakes prevent the stands from rolling when locked.

High-Grip

Oil-Resistant

Cleated

Multi-Ply Conveyor Belting

Constructed with an internal layer of strong, woven fabric surrounded by protective top and bottom covers. Replace a worn or damaged conveyor belt to prevent belt malfunction and conveyor downtime. Belts priced by the foot; to order 10 ft. your order quantity must be 10. All belts on this page are black; additional color options available on Grainger.com®.

Low-Friction—Coated to reduce friction so items can slide freely when diverted. It can also travel under accumulated items without damaging them.

Light-Duty—Suitable for conveying lightweight packages with intermittent use.

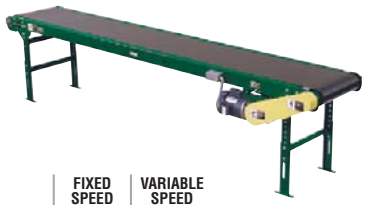
High-Grip—Textured or coated to increase friction between the belt surface and conveyed items. Suitable for moving items up an incline or keeping items from sliding side-to-side on the belt.

Oil-Resistant—Resists absorbing oils from conveyed items or production environments. Suitable for manufacturing facilities and similar applications with oil exposure.

Low-Stretch—Resists stretching and reduces the chance that the belt will move or slip during conveying tasks. Suitable for applications that require proper belt tension as items are conveyed.

Extreme-Temperature—Withstands exposure to very high or very low temperatures. Suitable for conveying very hot or very cold items and for moving items in industrial refrigerators, freezers, or ovens.

Fire-Retardant—Coated to resist ignition when exposed to flames. Suitable for environments with flammable materials, such as grain elevators and wood shops.



Heavy-Duty—Can withstand demanding conveying applications with heavy loads or continuous use.

Cleated—Has raised ridges that grab items more effectively than high-grip belting. Suitable for moving loose items up a steep incline while preventing them from rolling or sliding off the belt edge.

Medium-Duty Slider Bed Belt Conveyors

ASHLAND CONVEYOR PRODUCTS

General-purpose, powered conveyors are suitable for moving light items and items with small or irregularly shaped bottoms. Each has a motor that moves a wide PVC belt over a metal bed. Friction between the belt and surface helps control speed on declining conveyor sections. The belt also keeps items stable, and moves them at a consistent speed and spacing. Commonly used in sorting, packing, inspection, assembly, testing, manufacturing, distribution, and warehouse applications. Units less than 16-ft. long include 2 adjustable-height H-stands; those longer than 16 ft. include 3 stands. Sealed and prelubricated bearings. 4"D steel beds. Powder-coated steel frames.

Note: Field assembly required; units are nonreversing.

FLEXCO

Conveyor Belt Lacing and Lacing Tools

These mechanical fasteners allow conveyor belt installation without having to disassemble the entire system, minimizing downtime. Require tools for application.

Clipper® Lacing—Wire-hook lacing provides a strong grip across the width of the belt and won't weaken the belt's internal support layer, to help retain belt integrity. Low profile minimizes noise, helps reduce lacing wear, and provides a smooth surface.

Alligator® Lacing—Hammer-on lacing provides uniform tension across the width of the belt. Low-profile design minimizes noise, helps prevent lacing wear and tear, and provides a smooth surface. Use on belts of any width. Requires hammer for simple installation.

Staple-Style Alligator Lacing—Conjoined plates provide a strong connection that minimizes flex and fatigue at the joint. Larger surface area improves abrasion resistance. Use in light- and medium-duty applications.

Bolt-Hinge Lacing—Provides a strong joint that can withstand aggressive belt tensioning, and is flexible enough to travel over small pulleys. Conjoined hinged plates are fastened to the ends of a conveyor belt with bolts that can be removed for belt length adjustment.

Conveyor Belt Tensioners

BRYANT Products, Inc.

Tensioners simplify bearing changes and help ensure proper tracking, with a modular design that adapts to application needs. An adjusting rod is enclosed in a protective telescoping tube that helps prevent freeze-up. As the rod is turned, the tube extends or retracts to adjust belt tension.

Quick-Release No. 33UL08 has a toggle clamp that allows faster tension and release than manual tensioners. Excellent in applications where conveyor belts are frequently replaced or removed, such as food processing.

Roller Conveyor

ASHLAND CONVEYOR PRODUCTS

Heavy-Duty Chain-Drive Powered Roller Conveyors

For moving heavy items such as pallets, drums, and bulk containers in manufacturing, distribution, and other dirty or oily applications. Each section has a bed of sprocketed rollers that engage with the drive chain to help prevent slipping. Steel frames.

Note: Roller spacing affects the size of the items that can be conveyed on it. The smallest item on the conveyor should be supported by at least three rollers at all times.

Unpowered Extensions—Connect with powered drive sections to create a complete conveyor system.

BESTFLEX

Light-Duty Extendable Flexible-Frame Belt-Drive Powered Roller Conveyors

Conveyors help minimize the effort required to move loads with rimmed or uneven bottoms. Excellent for loading and unloading trailers, creating temporary assembly lines, and adding length to an existing conveyor. The accordion-style aluminum frames can stretch, curve, and contract to change length and shape, or collapse for compact storage. Rollers are self-tracking to ensure that items follow conveyor curves. Locking swivel casters allow units to be rolled into position.

Note: Roller spacing affects the size of the items that can be conveyed on it. The smallest item on the conveyor should be supported by at least 3 rollers at all times.

Rectangular Grate No. 34TA01

Round Grate No. 34TA09

Tube Magnet No. 34TA17

GA GRAINGER APPROVED

Magnetic Separators

High-strength magnets remove metal shavings and contamination from conveyors. They help prevent ferrous particles and parts from contaminating the product, causing damage in machinery downstream, and potentially creating a spark that could ignite explosive materials.

Ceramic magnets capture large ferrous contaminants such as nuts, bolts, or staples.

Rare earth magnets capture fine or weakly magnetic material such as rust or scale.

Grate Magnets—Made up of magnetic tubes arranged in a grid and welded into a frame. They drop into openings on steep-sloped hoppers, odd and irregularly shaped hoppers, floor openings, vertical closed chutes, and ducts. As bulk material falls through the grate during conveying, any ferrous particles and parts stick to the face of the magnetic tubes, removing them from the conveyed material.

Tube Magnets—Can be passed over bulk materials to attract and remove ferrous particles. Multiple tubes can be screwed onto stainless steel tie bars to create custom-configured grates. 1"-dia.

TANIS INCORPORATED

Conveyor Cylinder Brushes

These long, tubular brushes each consist of a strip brush wrapped around a cylindrical metal core. Light-duty brushes have open-wound nylon bristles for lightly cleaning and positioning conveyed items. They are effective in wet or intermittently hot environments. Medium-duty brushes have closely wound polypropylene bristles and are typically mounted under conveyors to clean belts, chains, and other components. They can also clean, debur, sort, or position items. They resist water, chemicals, and oil, and maintain their stiffness when wet.

Conveyor Strip Brushes

TANIS INCORPORATED

These conveyor strip brushes are typically mounted along conveyors to direct and separate items on the conveyor and clean debris from conveyed items and conveyor belts and parts. Also known as metal-backed strip brushes, they have a rigid metal backing with densely compressed bristles that are securely held in a U-shaped metal channel with a retaining wire. Models with stainless steel backing offer additional corrosion resistance. All brushes are installed into a compatible Strip Brush Holder (sold separately on this page) to help maximize contact between the brush and conveyor when the brush is mounted. Strip brushes are typically mounted along conveyors in material handling, packaging, food processing, and can be used for nonconveyor applications such as a creating a barrier at the bottom of a door to keep out air, dust, debris, and other contaminants.

Nylon—Provide good resistance to wear and abrasion and are effective when used in wet or intermittently hot environments. Max. operating temperature: 250°F.

Horsehair—Durable, natural horsehair bristles will not abrade surfaces. Max. operating temperature: 400°F.

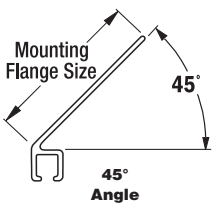
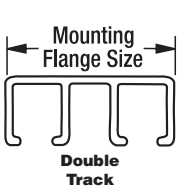
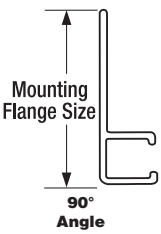
Strip Brush Holders



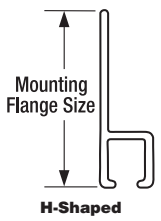
TANIS INCORPORATED



These holders allow compatible strip brushes to be mounted in a variety of orientations in a conveying system. They help maximize contact between the brushes and conveyor as the brushes direct and separate items on the conveyor, support delicate items, and clean debris from conveyed items and conveyor belts and parts. All holders can accept one brush strip, while double track models can accept two. The holder should be compatible with the backing height and width of the strip brush.



Aluminum—The brush's rigid backing slides into the channel in the holder, and the holder is then surface mounted using drilling or welding. Holder is corrosion-resistant anodized aluminum with a clear finish.



Stainless Steel—The brush's rigid backing slides into the channel in the holder, and the holder is then surface mounted using drilling or welding. Holder is suitable for use in high temperatures and corrosive environments.

ASHLAND CONVEYOR PRODUCTS

Package Stops

These install onto unpowered (gravity-flow) conveyors to help control the movement of items on the conveyor.

Axle-Mount—These L-shaped stops install onto the axles of skate wheel flow rails. The stop is mounted on the end of the rail so that the L projects above the surface to prevent conveyed material from moving past the end of the rail.

Bolt-On—Angle end stops attach to the top flange of the conveyor frame. Flat stops mount to the existing butt plate on the conveyor frame.

Plate-Style—Also known as dead plates, they create a flat surface for stopping conveyed items and also provide work space for tasks such as packaging, assembling, or inspecting conveyed items. These plates replace the rollers in the conveyor and bolt into place using the existing mounting holes on the frame of the conveyor.

Pop-Up Roller—Package stop replaces a standard roller in the frame, and has a handle to manually raise or lower the roller to temporarily stop or restart the flow of materials on the conveyor.

T-Slotted Framing Extrusion

These strong, straight sections of extruded aluminum can be machined to size using common shop tools and easily assembled without welding. The T-slot design allows strong connections anywhere along the axis of the framing for an infinite number of mounting points, and it can be disassembled and reassembled as needed. The 6101-T5 aluminum extrusion alloy is strong, lightweight, has a high strength-to-weight-ratio, and has a clear anodize which helps prevent oxidation and corrosion while providing a matte finish. Framing is suitable for use in factory automation, machine guarding and enclosures, workstations, tooling specialties, machine frames, carts, shelving, and displays.

Universal Pivot Nub Assembly

80/20® Inc.
The Industrial Erector Set®

T-Slotted Extruded Aluminum Profile Accessories

For use in machine guards and enclosures, workstations, displays, carts, shelving, and more.

Anchor Fasteners—Create strong, adjustable 90° connections.

Base Plates—Threaded center hole in aluminum plate is used to mount leveling feet or casters. Bolt kits sold separately.

Butt Hinges—Aluminum hinges have a clear iridite finish to match color of profiles. Use to mount lighter weight doors or two profiles side by side. Plastic hinges are black, fiberglass-reinforced nylon with stainless steel pin.

Deluxe Leveling Feet—Install in base plate or directly in the end of a tapped profile. Swivel up to 20° on uneven floors.

End Caps—Black plastic caps for T-slot profile ends. Fasteners included.

End Fasteners—Create concealed 90° connections between profiles.

Flat Joining Plates and Joining Plates—External fasteners ease connecting of profiles with no machining required.

Framing Extrusions—Provide a clean, flush connection and are typically used to reinforce a 90° connection.

Inside Corner Brackets —6105-T5 aluminum alloy with a clear anodized finish except for 30 Series Nos. 5JRT2, 5JRT3, and 5JRT4, which are die-cast aluminum with natural finish.

L-Brake Handles—Ratcheting matte handle secures brake-ready linear slide bearing in a semipermanent position.

Pivot Nub Assemblies—Add axial motion to T-slot profiles: connect two same-series profiles in parallel configuration, allowing one profile 180° axial motion. 6105-T5 aluminum alloy.

Supports—6" supports made from T-slot profile add strength to 90° corners. Fasteners included.

Swivel Casters with Brake—No. 2RCV6 has ⅜-16 x 1.5" zinc-plated steel threaded stem with 2"-dia. rubber wheel. No. 5JRN0 has 4"-dia. polyurethane wheel.

T-Nut and Screw Kits—Fasteners to attach joining plates and brackets. Zinc-plated steel, except No. 2RCU9 is stainless steel.

T-Slot Covers—Black cover snaps into profile slots to conceal wire and keep out dirt. Cut to size with scissors. 10 and 25 Series are PVC, the rest are polypropylene. 25 and 40 Series are 72½" long, and 30 and 45 Series are 78¾" long.

TMI LLC

Industrial PVC Strip Doors

Strip doors reduce air loss at doorways, creating a more comfortable work environment while saving energy costs. Standard smooth strips are the most economical while Ribbed PVC materials will reduce scratches and last longer. Cooler/Freezer strips will resist cracking in subfreezing temperatures. These kits include Save-T-Loc® universal mounting hardware and safety orange end strips.

Sliding Bug Screens

- Simple under-header installation

Flexible sliding barriers keep out insects, birds, and dust, while letting in sunlight and fresh air; help improve employee comfort and productivity, as well as facility sanitation. The roller-and-track mechanism can be easily slid open or closed by a single individual. Hook-and-loop fasteners and steel bar-reinforced side seams help seal the sides of the screen. All-weather vinyl-coated polyester construction is UV-resistant.

Flexible Traffic Doors

Chase Doors

- Textured vinyl construction with PVC body
- 36"W doors are sold individually, all others are sold in pairs

Designed for heavy-traffic applications, these traditional doors provide maximum opening clearance for wide loads. Replacement for existing doors is fast and easy due to simple construction of a top-mounted gravity hinging system.

►**Please choose:** Forest Green, Navy, Metallic Gray, Medium Brown, Red, Royal Blue, Chocolate Brown, or Black.

Overhead Door Openers and Control Systems

COMMERCIAL

½ HP, 115V motor for 12 cycles per hour, max. 50 cycles per day.

Hoist-Type Door Openers— Floor-level emergency chain hoist with electric interlock allows manual operation. Adjustable-friction clutch reversal system. Can be right or left mounted. Include wall-mounted, 3-button control station and standard solenoid brake. Prewired to accept sensing devices and optional radio control receiver No. 3ZRX2 and transmitters Nos. 46K657 and 3ZRX1.

Trolley-Type Door Opener— Solid double "L" rail handles heavier doors and allows quick installation. Internal auxiliary reversal system. Wired to accept optional radio control receiver No. 3ZRX2.

COMMERCIAL ACCESSORIES

Transmitters— Feature rolling code antiburglary technology. 315 MHz. No. 46K657 controls up to four separate doors and includes two 5-year, 3V lithium batteries. No. 3ZRX1 controls one door.

Note: 390 MHz frequency transmitters and receivers are available; call 1-800-GRAINGER (472-4643). On Grainger.com®, search for "garage door opener accessories."

INDUSTRIAL

½ HP, 115V continuous-duty motor for 25 cycles per hour, up to 80 to 90 cycles per day. Door closure timer can be set for 5-sec. or 1-min. increments.

Hoist-type door opener No. 2TRN1 has an emergency chain hoist with electric interlock. Nos. 36R922 through 36R924 are manually operated chain hoists. Trolley-type door openers Nos. 2TRN2 to 2TRN6 have a low profile.

UNIVERSAL ACCESSORIES

Photo Eyes— Feature a noncontact, infrared door-reversing sensor that provides protection on doors up to 30 ft. wide. Door automatically opens when beam is broken. Include emitter, receiver, mounting brackets, and operator interface. Wall- or floor-mounted. No. 6XZV7 is water- and dust-tight.

Trailer-Stabilizing Jacks and Notice Sign

Dayton IRONguard Protecting Your People

Jacks prevent up-ending semitrailers not connected to tractors, level trailers parked on slopes, and prevent landing gear from sinking into soft surfaces. High-strength steel. Flush-type zerk fitting for relubricating Acme screw. With reflective night-visible collar.

GAS-ACTIVATED JACKS

Gas-operated system automatically raises the stand and operator locks in place.

HYDRAULIC JACK

Lift heavy loads using force created by a hydraulic cylinder. The force is created by the pressure in the cylinder chamber.

RATCHET JACKS

Have 8"-dia. wheels.

No. 4W287—Triangular base has 18" sides. Two-way reversible ratchet with 2"-dia. thread screw allows a 12" adjustment range. 8"-dia. swivel head.

No. 3KR77—Extra-wide 6"W x 24"L lifting beam aids trailer support. Two handles assist positioning jack under trailer. Two-way reversible ratchet for adjusting height.

No. 2W878—With easily reversible 2-way ratchet, 2½"-dia. thread screw, and 12" adjustment range. 8"-dia. swivel head, 8"-dia. solid rubber wheels.

SPIN TOP JACKS

Manually turned Acme thread screw raises and lowers jack for fast installation and removal.

No. 2W877—With 10"L lift screw. 14"-dia. dome-shaped base for max. leveling stability. Not made for lifting.

No. 1F144—12" adjustment range. 8"-dia. swivel head and 8"-dia. solid rubber wheels.

NOTICE SIGN

Notifies drivers that OSHA requires use of trailer stabilizer jacks during loading and unloading.

Dockplates, Dockboards, and Container Ramps

GA GRAINGER APPROVED

Aluminum Dockplates—Nonskid tread plate. Zinc-plated handle or hand-holds on each side. Locking legs secure dockplate when in use.

Aluminum Fork Truck Dockboards with Aluminum Curbs—Handle higher load capacities than dockplates. Feature safety curbs. Positive traction treadplate with beveled entrance and exit lip. Legs allow easy fork truck positioning and secure dockboard when in use, for OSHA compliance. When using 3-wheeled fork truck, order dockboard with capacity at least four times the lifting capacity of the fork truck.

Hand Pump Hydraulic

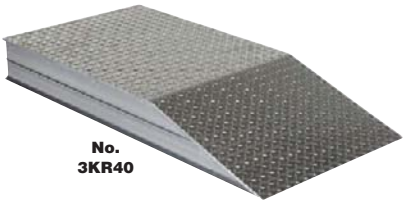
Mechanical Spring Counterbalance

Electric Hydraulic

GA GRAINGER APPROVED

Dock Levelers

- Load capacity: 20,000 lb.
- For docks at least 48"H



Permanently attach to dock face. Provide service range of 5" up, 5" down. No concrete recess required. Include 2" x 8" x 18" bumpers and steel bumper boxes. Can be used with Dock Seal No. 3KR49 or Dock Shelter No. 3KR50.

Dock Bumpers

Weather- and abrasion-resistant; protect docks, dock levelers, and shelters from impact damage. Individual sections can be replaced if damaged. Installation Kits Nos. 36F680 and 36F681 are sold separately.

LAMINATED DOCK BUMPERS

Prevent impact damage at loading dock. Constructed from same material used in heavy-duty tire cord. Weld to channel or to curb angle with one preset bolt. Mount with anchor bolts in new concrete construction or with lag bolts and shields for existing concrete. Wood dock mount requires lagging. Flush-mounted.

D-SHAPE

Compress on contact, reducing impact force between building and vehicle. Mounting holes on the back of the bumper protect vehicle's finish. 1-piece construction reduces gaps between bumpers.

L- AND T-SHAPE

T-Shape No. 2MYR8 includes a reflector.

GA GRAINGER APPROVED

RECTANGULAR

Include a thick molded-in steel bar running the length of each bumper; anchor the rubber to the dock. Mounting fasteners not included.

BUMPER STOP

Draws attention to high-traffic areas. Features a neon yellow caution stripe down its center, recessed to protect it from impact damage.

INSTALLATION KITS

Single Bumper—Includes four concrete anchor bolts (¾" x 4"L) and one ¾" masonry drill bit for installing one laminated dock bumper.

Additional Bumper—Includes four concrete anchor bolts (¾" x 4"L). Does not include masonry drill bit.

General Purpose Wheel Chocks

GA GRAINGER APPROVED

RUBBER

Molded Rubber—Resist tearing, abrasion, and ozone weathering. No. 3W666 wedges both sides of wheel with two molded rubber chocks. Order one unit for each wheel. No. 22XW75 is made of recycled rubber for utility trucks and trailers. Nos. 1GUK4 to 1GUK6 feature a grooved surface. Nos. 1GUK7 to 1GUK9 are hollow and 3-sided.

Molded Urethane—Rubber pads grip pavement. Width of chock has molded open area for attaching security chain.

Laminated Rubber—Cord-reinforced serrated rubber on steel rods. Feature large handle.

STEEL

Heavy-Duty Steel—Bottom teeth for maximum traction. With easy-grip slot for pickup and positioning. No. 1GUL3 includes 10-ft. chain.

Formed Steel—Long-life, all-weather chocks have saw tooth bottom. Include hole for attaching security chain and hanger.

ALUMINUM

Extruded Aluminum—Serrated surface grips tire, and triple-edged bottom grips ground.

Rail Car Wheel Chock No. 22XW90

Monster® Aviation Wheel Chocks No. 5NHP9

Monster® Wheel Chocks No. 21ZF79

GA GRAINGER APPROVED MONSTER MOTION SAFETY

Specialty Wheel Chocks

Rail Car Wheel Chocks—All-welded steel chocks for securing rail cars for safe loading and unloading. No. 22XW93 is sold as a pair.

Monster® Wheel Chocks—Urethane construction made for mining and construction trucks. Will not cause tire damage. Oil- and chemical-resistant. Feature carrying handle.

Monster® Aviation Wheel Chocks—Impact-absorbing urethane construction. Oil- and chemical-resistant. Will not rot or splinter. Feature replaceable nylon rope lanyards.

Monster® All-Terrain Urethane Wheel Chocks—Oil- and chemical-resistant. For use with utility trucks and trailers. Urethane chocks are designed for fire trucks and all-terrain applications. Feature carrying handle. All-Terrain Urethane chocks comply with NFPA 1901-1909 and meet SAE-J348 Specifications.

Speed Bumps, Mounting Kits, and Caution Sign

HOSE AND CABLE RAMPS

Nos. 2GWL7 to 2GWL9 are wider to increase channel height while retaining incline. Mounting kit not included.

RECYCLED PLASTIC SPEED BUMPS

Bottom side includes two ¾" x 1" channels for hoses and cables.

POLYETHYLENE SPEED BUMPS

Constructed of durable and lightweight HDPE. Highly visible bright yellow. Flexible design fits contour of road or factory floor. Can be used as a cable protector. Include asphalt mounting kit.

MOLDED RUBBER SPEED BUMPS

Multipiece speed bumps allow easy installation and different length requirements. Include 1 center, 2 end modules, and mounting hardware.

SPEED BUMP GLUE DOWN KITS

For applications where drilling holes in the mounting surface is not recommended. For 72"L speed bumps order 2 Glue Down Kits No. 5XPR8.

RECYCLED RUBBER SPEED BUMPS

Cover cabling, piping, and have channeled bottom for drainage. No. 29NH36 is a bump end cap.

Column and Corner Protectors

GA GRAINGER APPROVED

100% HDPE is resistant to chemicals, rust, stress, and cracks. For indoor and outdoor use. Safety yellow.

Column Protectors—Fit all types of columns. Key-lock minimizes slippage and assists with alignment during installation. Protectors install with two 2" black nylon belts with hook-and-loop fasteners (included) and are stackable. No. 5AB22 has a slim profile.

Corner Protectors—Install on overhead door frames, corners, vertical columns, or horizontally as machine or rack guards. Protectors install with bolts or nylon straps (not included). Sold in sets of two.

Premium Column Protectors

No. 33RH93

No. 33RJ03

No. 33RJ09

PREMIUM COLUMN PROTECTORS

These protectors are heavy-duty with air vents and deep pockets that deflect impact energy away from columns. LLDPE is semiflexible and stress-crack resistant. Chemical-resistant, nonconductive, waterproof, easy to clean, and removable for maintenance. Easy to install. Straps included. Sizes to fit most columns.

CONCRETE WRAP COLUMN PROTECTION

Easy-to-install polyurethane foam wrap adds a layer of protection around concrete columns, helping eliminate the constant chipping, painting, and maintenance to concrete columns. Semiflexible and crack-resistant.

COLLISION PROTECTION FOR PARKING STRUCTURE COLUMNS AND WALLS

Easy and attractive way to add a layer of effective of protection around parking structure columns and walls. Made of ARPRO®, a high-tech material specifically engineered to absorb impact. Provides soft, scratch-resistant protection to protect vehicles and columns from collision damage. These modular designs are easily customizable for any size column or wall space.

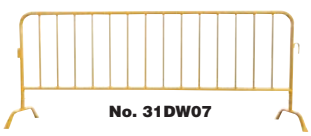
Ribbed Guard Rails

Combine as a modular system that can be installed, removed, or expanded. ⅛"-thick (11-ga.) galvanized steel for outdoor use. Industrial yellow powder-coat finish for indoor use only.

Bolt-On Guard Rails—Easy to assemble and install. Impact-resistant, 2- and 3-ribbed corrugated design have no sharp edges or corners. Galvanized construction resists corrosion.

Lift-Out Rails—Provide a strong barrier with easy accessibility. They have the same construction and profile as bolt-on rails, yet slide into post saddles for simple assembly. Each rail section includes two post saddles.



Posts—Two post heights come in both in-line and corner configurations for single-row (high) and double-row (high) installation. Posts are made of round-corner, 4" square steel tube with ¼"-thick walls, and are welded to a 10" square, round-corner ⅝"-thick steel base plate. Include hardware, bolts, anchors, washers, and nuts.

Pallets

Extruded Aluminum Pallets— Feature three strings across the bottom for increased strength.

Plastic Pallets—Provide two-way entry by pallet truck and four-way entry by fork truck. Maintenance-free and moisture-resistant, will not rot or splinter.

Presswood Pallets—Nestable design allows stacking. Does not contain any nails or staples. Manufactured from recycled wood materials.

Stackable—Provide high load capacities for handling and shipping heavy products. Stackable for efficient storage.

Modular—Allows pallets to be configured to any length or width.

Nestable—Lightweight and durable for easy handling. Nestable when empty to reduce space and freight cost.

Rackable—Allow products to be stored in a variety of supported or edge rack systems.

Adaptable Pallet

FAST LOCK PALLET

Save floor space by creating custom pallets from 12" to 8-ft. long using interlocking units. EZ Band notch on end of each unit provides a way to cross-band product to the assembled pallet at every 12". Lightweight pallets are ideal for closed loop or returnable system, in-house movement, and shipping of varying-sized items. Units allow for easy storage of supplies that need to be kept off the ground.

- UV-resistant
- High-density linear polyethylene
- Wal thickness: 3/16"
- Max. temp.: 130°F

NSF and FDA Compliant (except tanks with fittings). Horizontal Liquid Storage Tanks and Stands are sold on page 1137.

Tanks—High-density polyethylene tanks are designed for storing, mixing, and transferring compatible liquids in industrial and manufacturing applications. They feature gallon and liter indicators, and 14" to 18" fill openings (35-gal. tanks have 6" openings). Open-top tanks come with lid cover. For bulkhead fittings, see page 2817.

Stands—Can be used with all vertical tanks.

SNYDER INDUSTRIES, INC.

Horizontal Liquid Storage Tanks

- UV resistant
- High-density linear polyethylene
- Wall thickness: ¼"
- Max. temp.: 130°F

All storage tanks are NSF 61 and FDA Compliant (except tanks with fittings).

HORIZONTAL-LEG TANKS

Used in municipal, transportation, agricultural, and construction markets to carry compatible liquids to remote locations.

RECTANGULAR AND SADDLE TANKS

For sprayer pumps, see page 2669.

Rectangular—Taller and narrower than Saddle Tanks, these tanks provide equal storage space and are suited for smaller vehicles.

Saddle—Each has hose rack and brass studs for mounting spray pumps. Small size suits them for use on all-terrain vehicles. For replacement fittings, see pages 2556, 2557.

Carbon Steel Transport Drums

Lined drums feature a modified phenolic coating that resists corrosion and chemical reactivity. Unlined drums are treated with a mild rust inhibitor.

Open-Head—Removable covers are EPDM-gasketed with either a UN-qualified lever lock or bolt. No tools, torque, or ring gap measurements are required for lever lock ring.

Closed-Head—Drum lids are permanently secured and include 2" and 3/4" steel plugs and flanges with Buna gaskets.

Salvage/Overpack—Use open drums for transporting leaking or damaged containers. Covers are EPDM-gasketed and secured with lever lock ring closures or bolt. Yellow drums with red cover feature "Salvage Drum" logo.

Polyethylene Transport Drums

High-density polyethylene (HDPE) is compatible with a wide range of chemicals. Open-head drums feature lever lock ring closure. Closed-head drums have two top fittings, a 2" NPT, and a 2" buttress fitting, except 15-gal. drums have 2" NPT, and ¾" NPT. Nos. 19H055, 19H056, and 2GTZ3 have double handles.

Drum Faucets and Drum Safety Vents

FM Approved, except No. 1XPX8; No. 5A501 is FM Approved for viscous liquids only, and No. 5A502 is FM Approved for nonviscous liquids only.

DRUM FAUCETS

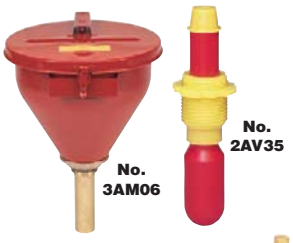
Brass Adjustable, Stainless Steel Adjustable, and Brass Rigid—Self-closing. Use with oils up to 30W, noncorrosive flammables, and nonflammables. For use with drum in horizontal position. No. 5A504 has an internal flame arrestor and adjustable feature that allows the nozzle to be positioned after being threaded into drum. No. 5A503 has an external flame arrestor.

Economy Zinc Rigid—Self-closing with padlock holes. Cannot be used with chlorinated solvents. Brass color. No. 5A502 has a flame arrestor.

Brass Gate Valve—Self-closing wide mouth opening. Knife-style, spring-activated PTFE blade has positive shutoff when 4½"W handle is released. Use with viscous noncorrosive liquids heavier than 30W motor oil. Use with drums in horizontal position.

Polypropylene Fiberglass Reinforced—Allows drums with 2" plug to be emptied or filled from a horizontal position. Locking ring connects faucet to drum handle, unscrews plug for tapping or filling.

DRUM SAFETY VENTS



Horizontal—Fusible emergency relief plug melts at 135°F. Brass bung vent and a flame-arresting baffle; max. content flow of 220 cfm at 20 psi.

Vertical—Provides manual vacuum relief. Internal flash arrestor.

Drum Cover Accessories

Safety Drum Funnel—Fits into 2" drum bung. Accommodates padlock, not included.

Drum Level Gauge—Special plated fitting threads into ¾" NPT drum bung and has a female ¾" NPT provision to fit most faucets. Not for use with chlorinated solvents, high-concentrated acids, or alkalis.

Polyethylene Pop-Up Gauge—Indicator warns when nearing capacity. Screw into ¾" opening of a vertical drum.

Drum Lock—Solid brass with ½" zinc-plated steel lockarm, predrilled with a hole for a padlock, not included. Fits both 2" and ¾" standard dia. drum threads.

Drum Plug Locking Device—Locking device prevents access to the material contained in your drums. Simply slide the two halves of the locking device around the bung flange, slip the joining bar through the halves, and insert a padlock (sold separately) through the end hole of the bar. Sold in a set of two 2" plugs; fits plastic drums with raised bung flanges.

Drum Heaters

- Dielectric tested at 1250V for 115V drum heaters and at 1500V for 230V

Mount below drum contents for freeze protection, viscosity control, melting, or keeping elevated temperatures. Nickel alloy heating element and electrically grounded, insulated screen. 115V units have 6-ft. cord set with 3-prong molded plug; 230V have a pigtail end. UL Recognized and CSA Certified.

Note: Actual temperature of the contents is affected by thermostat setting, heater wattage, type of drum contents, ambient temperature, and other system characteristics. Multiple heaters may be required for some applications.

For Horizontal Metal

For Vertical Metal

For Poly

FOR VERTICAL METAL

Wraparound heaters connect with a spring-and-clip device. Control range: 50° to 400°F. Temperature control stem rotates 310°. All have adjustable thermostats, except for No. 3CDA1.

FOR HORIZONTAL METAL

Reusable heater can be used while drum is in cradle. Control range: 50° to 400°F.

FOR POLY

Control range: 50° to 160°F, plus over temperature control.

Drum Blankets and Pipe Heaters

DRUM BLANKET HEATERS

Heaters fit 55-gal. drums. For No. 3JJJ4, control range is 50° to 160°F. For Nos. 3JJJ2 and 3JJJ6, control range is 50° to 450°F. No. 3CDC4 has aluminized cloth exterior with 1" fiberglass insulation. Easy to install with hook-and-loop fasteners. Control range is 50° to 400°F.

Drum Blanket Heater

Silicone Rubber Pipe Heater

SILICONE RUBBER PIPE HEATERS

- Control range: 40° to 60°F

Reusable heaters thaw and keep metal pipes from freezing. Fit dia. from ½" to 1½". Preset thermostat. Install with hook-and-loop fastener straps. Not for plastic pipes.

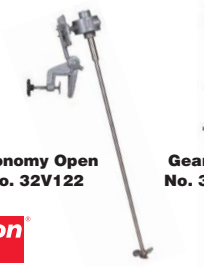
Silicone Rubber Flexible Heater

SILICONE RUBBER FLEXIBLE HEATERS

- Operate to 400°F
- Resistance tolerance: ±10%

Install with RTV (Dow 732 or equal) adhesive. Include 12" PTFE insulated leads. UL Recognized and CSA Certified.

Polyimide Flexible Heater



POLYIMIDE FLEXIBLE HEATER

- Operating temp.: -70° to 390°F
- Resistance tolerance: ±10%
- Max. thickness: 0.10", except in lead exit area

Low-profile, low-watt density Kapton® heater. PTFE insulated leads. Easy to install with RTV (Dow 732 or equal) adhesive.

Drum and Tank Mixers

- Shipped unassembled
- 115 to 230V, 1-Phase

Feature TEFC electric motor or air motor and include 316 stainless steel shaft with propeller.

Economy Open Drum Mixers— Mount directly to tanks or on rails with 1⅞" opening adjustable clamp. Adjustable bracket. 4"-dia., 3-blade fixed-propeller. Nos. 32V133 and 32V134 include junction box.

Bung-Entering Drum Mixers—For use with 55-gal. or smaller closed-head drums. Enter 2" bung opening with 2-blade folding propeller.

Bung-Entering Intermediate Bulk Container (IBC) Mixers—For use on 275- to 550-gal. drums. 9" propeller folds to pass through 2" coupling. No. 32V148 provides a metallic 2" coupling by mounting directly to plastic cap of poly IBCs.

Gear-Drive Tank Mixers—Cast-aluminum, handle up to 5000 gal. with viscosities up to 15,000 cps. Clutch-free with 3-blade square-pitch marine propellers. Index marks for angle and radial adjustment.

Direct-Drive Tank Mixers—Clamp to tank rim. Adjustable motor speed, utilizes standard shafting to extend propeller to 48".

- Air-driven

Laboratory Mixer—Clamp can be used to make angular and radial adjustments. Shaft for use with tanks up to 50 gal.

Laboratory Mixer With Stand—Features four shafts. Adjustable height with hand knob. Includes cast-aluminum base with 36" mast. Base bolts to work surface.

- Air-driven

Handheld Air Mixer—Air control valve allows low-speed mixing and easy speed adjustment. Multiblade cage impeller protects blades. Cast-iron aluminum pistol grip. For 5- and 10-gal. open containers.

- Air-driven

Paint Supply Mixers—No. 32V131 is for use with 5-gal. HVLP spray packages. No. 32V132 is for use with any 55-gal. drum cover. Max. torque of No. 32V131 is 6.5 in.-lb. (at 650 rpm); max. torque of No. 32V132 is 26.1 in-lb. (at 350 rpm). Removable shafts for use with lids and containers.

Drum Trucks/Dispensers

- Load capacity: 1000 lb.

STEEL TRUCKS

Adjustable chime hook is self-storing. Allows transport of 55-gal. drum. 1" schedule 40 steel pipe frame is double-welded.

Steel Drums—No. 34D644 includes a kickstand and mold-on rubber wheels.

No. 34D646 has replaceable beveled drum shoes. Floating axle for easy handling.

No. 34D647 includes kickstand and welded drum shoes. Truck has combination handle, rear wheels, and swivel casters.

Poly Drums—One-way belt system for poly and fiber drums. Feature extra-wide nose pads and oversized handles with belt hooks. Include kickstand. No. 34D649 has spring-loaded axle for easy handling.

ALUMINUM DRUM TRUCKS

Drums are automatically engaged through the use of a spring-load chime hook. Reversible nose prongs are for use with 30- or 50-gal. drums. No. 34D653 has hand brake.

Drum Cradles

55-GAL.

Cross-braced, channeled steel cradle frame with nonsparking oil- and chemical-resistant wheels.

No. 1GC91—Four 3" rigid polyolefin wheels are mounted inside the frame.

No. 3BA26—Two 3" rigid polyolefin wheels and two 3" polyolefin swivel casters.

30- AND 55-GAL.

Four 4" rigid polyolefin rollers allow drum to be rotated for positioning; resist reaction with fats, oil, and chemicals. Partially assembled. Top section has welded steel construction that bolts to the uprights. Retractable hardwood handles.

Drum Lifters

VERTICAL DRUM LIFTERS
▪ Ship assembled

Move drums to a different location automatically. Align on drum chime using grip pads. Use with overhead hoist or crane. Crane lift hook engages lifter and grab hooks. Orange enamel finish.

ECONOMY DRUM LIFTERS

Lock pin provides safe transportation for drums by preventing them from opening. 1½"-dia. lifting eye is mounted on top of four ¼" x 1" hot-rolled steel supports.

SALVAGE DRUM LIFTERS
▪ Ship assembled

Orange enamel lifter places a 55-gal. drum into an 85-gal. steel or poly salvage/overpack drum using one moving part.

VERTICAL DRUM LIFTERS/DISPENSERS
▪ Ship assembled

Yellow lifter requires just one-person to transport and pour from open- and closed-head drums. Fiber Drum Adapter No. 4W966 sold separately.

Manual No. 12R538

Control provides 360°, low-level pouring and dumping. Holds drum vertically or horizontally during transit with positive tilt lock on drum saddle.

Geared No. 12R541

Features 5½-ft. control chain to lock drum in position. Drums that are less full are easier to tilt. Pour from remote heights.

ECONOMY OVERHEAD DRUM LIFTER

The three removable arms have either a drum faucet wrench, a removable top-ring wrench, or a built-in bung nut wrench. Drums can be lifted, transported, or lowered. Does not include required overhead lifting device.

OVERHEAD DRUM LIFTER

When lifting force is applied, an adjustable safety and positioning brake is engaged. Drum tops are automatically secured by a release lock. Welded steel construction. Requires an overhead lifting device (not included).

OVERHEAD MOUNT LIFTERS

Drums can be lifted by arm return spring on scissor arms. 21-ft. L x 9-ft. W x 16"H for 55-gal. 2-ft. 19¼"L x 9-ft. W x 15½"H for 30-gal. Use with Nos. 6XDR6 and 6XDR7, sold separately.

HOIST-MOUNTED DRUM LIFTER

When lowered, lifter automatically engages drum rim. Stabilizing arm reduces damage to drums. 3-pt. drum contact. Orange enamel finish.

Automatic Fork Truck Drum Lifters

Units feature heavy-duty steel construction and can lift drums easily and quickly without hydraulic or electric connections. Simply slip drum onto forks and tighten hand screws. Attach or hang lifter on hook from an overhead hoist or crane.

SINGLE-DRUM

Single-jaw can be used with steel, plastic, or fiber drums.

DOUBLE-DRUM

For light-gauge steel, removable lid, plastic, and fiber drums with standard top chime. Double-jaw engages the drum in two places, approximately 7" apart, for even weight distribution.

Fork-Mounted Drum Handling Equipment

Designed for transporting and lifting closed-head drums.

DRUM GRABS

Hand-tightened lock screws secure grabs to forks. Bar jaws are made of steel. All-welded construction. No tools necessary to adjust drum grabs.

Note: 2-drum models should only be used with two same-sized drums.

Steel Drum Models—For closed-head drums.

Poly Drum Model—Use with drums with at least ⅜" top lip (chime).

AUTO-GRIP

For steel drums only. Mechanical grip is gravity-actuated for heavy-duty applications. For various size overpack drums, spring- and cam-actuated rubber-lined jaws can be manually adjusted. Adjustable distance between forks.

ROUNDED-BOTTOM

No. 21VG55 is used for egg-shaped plastic drums. Low drum attachment point. No. 21VG47 is used for steel, plastic, and fiber closed-head drums with a top lip. High drum attachment point requires at least 3/16" drum top lip.

Shelf and Utility Cart Selection Guide

MATERIAL

- **Metal:** Metal shelf and utility carts are more rugged and typically can hold heavier loads than plastic shelf and utility carts.
- **Plastic:** Plastic shelf and utility carts are lighter and provide more resistance to dents, corrosion, and water damage than metal shelf and utility carts.

HANDLES

- **(2) Handles:** Front and rear handles allow cart to be pushed from either side when maneuvering in tight spaces.
- **Ergonomic Handle:** Provides comfortable grip.
- **Flat Handle:** Low-profile handle stays out of the way.
- **Raised Handle:** Provides comfortable hand placement and push height.
- **U-Shaped Handles:** Offer secure grip when climbing ladders on vertical-access carts.

SHELVES

- **Adjustable Shelf:** Shelf can be raised or lowered to accommodate items of different sizes.
- **Compartmented Shelf:** Deep compartments keep containers of chemicals stable and capture spills.
- **Deep-Lipped Shelf:** Tall lip contains spills and better protects against items sliding off the shelf than a shorter lip.
- **Fixed Shelf:** Shelf cannot be moved.
- **Flush Shelf:** Flush sides let items slide onto or off of the shelf.
- **Lipped Shelf:** Short lip stops items from sliding off shelf, and heavy items don't need to be lifted far to clear the lip.
- **Perforated Shelf:** Small openings on shelf surface let liquid and debris fall through, which helps keep the shelf clean.
- **Removable Shelf:** Shelf can be removed for cleaning or to accommodate tall items.
- **Shelf with Lipped Guards:** Tall guards run along the length and width of the shelf to prevent items from sliding off it.
- **Single-Side Flush Shelf:** One flush side lets items slide onto or off of the shelf, and three lipped sides stop items from falling off the shelf.

Deep Lipped Shelf w/ Flat Handle No. 5UTH9

METRO We put space to work. | GA GRAINGER APPROVED | Rubbermaid Commercial Products

Utility Carts with Deep-Lipped Plastic Shelves

Adaptable-Design Utility Carts with Deep Lipped Plastic Shelves

Rubbermaid Commercial Products

Adaptable-design utility carts can be reconfigured for different tasks. The carts' ergonomic handle can be repositioned to improve operator comfort. A flip-up shelf provides a flat work surface without having to rearrange items on the top shelf. Tool-holding slots, snap hooks, and other storage features keep items organized on the carts. V-notch holds pipe or conduit during cutting. The carts' shelves have a tall lip that contains spills and stops items from sliding off the shelves. All have two locking swivel casters and two rigid casters. Assembly required.

Utility Carts with Flip-Gate Flush Plastic Shelves

The shelves on these carts have hinged sides that flip up to create a lip that stops items from falling off them or flip down to create a flush surface that lets items slide onto or off of the shelves during loading or unloading. The carts' I-shaped support posts provide unobstructed access to the bottom shelf. All have two swivel casters with brake and 2 rigid casters.

Load Capacity	Shelf Length	Shelf Width	Overall Length	Overall Width	Overall Height	Item No.
400 lb.	28"	17"	42"	19"	34"	**5YM99**
	32"	22"	46"	24"	34"	**4YT95**

Nestable Utility Carts with Perforated Lipped Plastic Shelves

These utility carts nest together to save space when storing the carts. The carts' perforated plastic shelves let liquids, dirt, and debris fall through them, which helps keep the shelves clean when the carts are used in dirty or wet areas. The shelves have a short lip that stops items from sliding off them. All have two swivel and two rigid casters.

No. 6WZK8

Convertible Utility Carts with Flush Plastic Shelf and Platform

Rubbermaid Commercial Products

The top shelf on this cart folds down to convert it to a solid-back platform truck so it can carry items that would be too large to fit on it when the top shelf is in place. The shelf and platform are flush, which lets items slide onto or off of them during loading and unloading. The platform has a 250-lb. capacity. The cart has four swivel casters, two of which are locking. Ships assembled.

Structural Foam Plastic Mobile Cabinet Workbenches

Mobile cabinet workbenches provide tool storage and a flat work space. Made from structural foam plastic, which will not rust, dent, or chip. Models with lockable drawers feature ball bearing full-extension slides. Some assembly required, except for No. 4UR44.

250-LB. CAPACITY

Five metal storage drawers. Pegboard side panels provide hanging storage. Locking bar keeps contents secure. Built-in cord wrap. Four 4" nonmarking casters (2 swivel, 2 rigid).

330-LB. CAPACITY

Multiple compartmentalized boxes and slide-out trays. Molded compartments on handle provide extra storage. Built-in cord wrap. Four 5" nonmarking casters (2 locking swivel, 2 rigid).

500-LB. CAPACITY

Locking cabinet with shelves or four locking drawers. Includes 3-outlet surge-suppressor power strip with 10 ft. cord. Four 5" nonmarking casters (2 locking swivel, two rigid).

750-LB. CAPACITY

Locking cabinet and four locking drawers. Includes 3-outlet surge-suppressor power strip with 10-ft. cord. Four 5" casters (2 locking swivel, 2 rigid).

Chemical-Resistant Utility Carts with Plastic Shelves

Made from chemical-resistant materials that withstand exposure to acids and corrosives. All have two swivel and two rigid casters (6GJY8 has locking casters), two shelves, and a flat handle. **Antimicrobial** shelves have been treated with an antimicrobial compound to prevent the growth of odor- and stain-causing bacteria, mold, and mildew.

Corrosion-Resistant Metal Shelf and Utility Carts

Stainless steel carts resist rusting when used in environments where they will be exposed to frequent cleaning, washdown, or other corrosive materials. They are used in commercial kitchens, food-service facilities, laboratories, medical facilities, cleanrooms, manufacturing plants, marine areas, and similar areas.

Easy-Access Metal Shelf and Utility Carts

Easy-access metal shelf and utility carts have central pillars that support the top shelf at the front and back of the carts rather than the corners. This lets users load and unload items on the carts' bottom shelf more easily than they could on a cart with four corner supports. The carts have a flush top shelf and lipped bottom shelves.

Metal Shelf and Utility Carts with Ventilated Walls

Metal mesh walls surround the top shelf on these carts to provide maximum protection against items falling off the shelf while the carts are moving. The mesh walls also allow air to flow through them for ventilation and let users see items on the shelf. The carts have a lipped bottom shelf.

Flow-Through Metal Shelf and Utility Carts

These flow-through utility carts have metal shelves with openings that let debris and liquid fall through them, which helps keep the carts clean when used in dirty or wet areas. **Perforated** shelves have small holes. **Slotted** shelves have long vertical openings.

Low-Profile Metal Shelf and Utility Carts

The top shelf on these carts is set at a lower height than other styles of metal shelf and utility carts. This reduces how far bulky or heavy items must be lifted when loading them onto the top shelf. **Easy access and load** carts have two rear corner posts and a front central pillar that support the carts' top shelf and reduce obstructions when moving items onto or off of the carts. They also have flush tube shelves that let items slide onto or off of the shelves and allow dirt and debris to fall through the spaces between the tubes.

Metal Shelf and Utility Carts for Instruments

GA GRAINGER APPROVED · LITTLE GIANT

The shock-absorbing casters and cushioned shelf matting on these carts absorb shock and vibration, which helps protect instruments and delicate, vibration-sensitive equipment on the carts from damage when moving them in laboratories, testing facilities, and similar areas. The matting also has a nonslip surface that stops items from sliding on the shelves and colliding with each other. Also known as instrument carts. **Low-profile** carts have a top shelf that is set at a lower height than other carts to reduce how far bulky or heavy items must be lifted when loading them onto the top shelf.

Vertical-Access Metal Shelf and Utility Carts

GA GRAINGER APPROVED · Vestil

The built-in ladder on these carts can be used for reaching high areas in warehouses, stock rooms, and similar locations. Also known as stock-picker trucks or ladder trucks, vertical-access carts save workers from having to carry or move a separate ladder for their work. The ladder has a spring-loaded mechanism that prevents the cart or ladder from moving when a worker is on the ladder. This mechanism also raises the ladder and allows the cart to roll when the ladder is not in use.

Wire Shelf and Utility Carts

Wire shelves let dust and debris fall through and away from them, which helps keep them clean. Air can circulate through the shelves for ventilation, and users can see through the shelves to view their contents. All carts have four swivel casters, except as noted. **Heavy-duty** shelves are supported by square corner posts and can hold more weight than shelves that are supported with round corner posts.

Corrosion-Resistant Wire Shelf and Utility Carts

These carts are made from stainless steel or a combination of stainless steel and chrome. They resist rusting when used in areas where they will be exposed to frequent cleaning, washdown, or other corrosive materials. The carts have wire shelves with a shallow lip and do not require objects to be lifted very far to put them onto or take them off of the shelves. The shelves' height can be adjusted in 1" increments to accommodate different sizes of items. All have 4 swivel casters, except as noted.

Wire Shelf and Utility Cart Covers

Covers fit over carts to protect their contents from dust and other airborne particles. They also conceal the carts' contents to maintain an attractive appearance and deter theft or tampering. **Hook-and-loop** closure fastens and unfastens quickly. **Zipper** closure is more secure than hook-and-loop closure. **Blue nylon** covers are made from waterproof, fire-retardant vinyl-coated nylon fabric, which resists tearing, mildew, and odors. **White vinyl** covers resist tears and are antimicrobial, which means they inhibit the growth of bacteria and other organisms that can cause odors and stains.

Wire Shelf and Utility Carts with Angled Shelves

Angled wire shelves make it easier to see items on the shelves than on flat shelves. Gravity moves items at the back of the shelves forward when items at the front of the shelves are removed. The shelves have a short lip on one side and a tall lip on the other side that prevent items from falling off. The shelves can be reversed to put either the short or tall lip at the front. Shelf height can be adjusted in 1" increments to fit different sizes of items. All have four shelves and four swivel casters (two of the casters have brakes).

Dual-Latch Welded Mesh Security Carts

The two latches on these carts can be locked with a padlock or other locking device to secure the carts' contents. The carts' doors and/or walls are made from welded steel mesh and have small openings that let air circulate through them and keep the carts' contents visible. The carts' fixed shelves are welded in place and cannot be moved. All carts have two swivel and two rigid casters.

Optional Caster Kit

Self-Dumping Steel Hoppers

Dayton

- Red powder-coat finish on hopper, black base

HOPPERS

Automatically dump loads when locking latch is released, then return to locked position. Constructed with precision robotic weld; base is formed steel. Safety chain secures hopper to fork truck, while cable enables dumping from fork truck seat.

Low-Profile

Feature a 90° dump angle and half-length fork entry. Hoppers return to locked position when lowered to ground.

Front-Release

Bumper dumps hopper a minimum of 70° when activated. Full-length fork entry. Predrilled for caster kit.

OPTIONAL CASTER KITS

Casters are field installable with hardware included. Include 2 rigid and 2 swivel casters. Intended for use on front-release hoppers only.

General Purpose Cube Trucks

No. 36FL23

General purpose cube trucks are used for a variety of material-handling applications. They have a mix of rigid casters and swivel casters that allow them to both move around curves and obstacles and track a straight course while rolling.

Raised-Platform
No. 19G901

Jamco Products | GA GRAINGER APPROVED | LITTLE GIANT

Drop-Gate & Raised-Platform Box Trucks

These box trucks have features that reduce effort when loading and unloading the trucks. All have two swivel casters and two rigid casters, except as noted. **Drop-gate** trucks have one side wall that folds down halfway to reduce how far items have to be lifted to get them over the wall. **Open-sided** trucks do not have a wall on one side of their container, which lets users slide heavy objects into or out of the container. **Raised-platform** trucks have a platform that elevates the trucks' container to reduce bending and straining when reaching into the container.

Permanent Mildew-Resistant Vinyl Liner
No. 4W331

TOUGH GUY | ROYAL BASKET TRUCKS

Basket Trucks

Basket trucks have soft fabric liners that keep items from falling out of the trucks as they're moving. The liners may be permanently attached to the carts' frame, or they may be removable to allow for cleaning and replacement. Also called laundry or mail hampers, these lightweight carts can carry laundry, sports equipment, packages, and other bulk materials. All have a wood base. **Canvas** liners resist abrasion but are prone to mold and mildew if exposed to dampness or moisture. **Vinyl** liners are stronger than canvas liners. They resist mold, mildew, and tears and withstand exposure to UV rays. Vinyl liners are also flame-retardant, but other parts of these basket trucks may not be.

General Purpose Steel-Deck Platform Trucks

Platform trucks with a steel deck provide good strength for transporting a wide variety of materials. They are commonly used for moving raw materials, packages, tools, and equipment in warehouses, factories, loading docks, stock rooms, and mail rooms. All have two swivel and two rigid casters, except as noted.

No. 16D330

No. 13X486

Narrow Steel-Deck Platform Trucks

These platform trucks have a long, narrow steel deck with tall handles at the ends. Also called U-boat platform trucks, they are used for moving tall stacks of packaged goods and other boxed items. The trucks can pivot 360° when maneuvering in tight spaces such as aisles in warehouses, supermarkets, retail stores, and stock rooms. All have four swivel and two rigid casters, except as noted.

High-Capacity Steel-Deck Platform Trucks

High-capacity steel-deck platform trucks have two large-diameter, rigid, axle-mounted wheels that let the trucks bear heavy loads and start rolling more easily when loaded than other steel-deck platform trucks. They also have two swivel casters that allow them to maneuver around curves and obstacles. Suitable for moving molds, dies, metal sheets and coils, and other heavy equipment in industrial locations such as manufacturing plants, warehouses, and construction sites.

High-Maneuverability Steel-Deck Platform Trucks

High-maneuverability steel-deck platform trucks have a caster configuration that lets them make tighter turns and navigate more easily in warehouse aisles and similar tight spaces than other styles of platform trucks. Carts with a **standard** or **diamond** caster/wheel configuration have two swivel casters and two rigid casters. Carts with a **6-wheel** caster/wheel configuration have four swivel casters and two rigid casters and provide more stability than carts with fewer casters.

Towable Steel-Deck Platform Trucks

Towable platform trucks have a drawbar and hitch and can be attached to towing equipment or connected to other towable platform trucks. They also have a handle and can be manually pushed or pulled, and the handle can be removed to make room for oversized objects. Suitable for industrial applications where items need to be picked with a platform truck and then moved to another area using powered towing equipment. All have four swivel casters and two rigid casters.

Aluminum-Deck Platform Trucks

Aluminum-deck platform trucks resist corrosion and are lighter than platform trucks with stainless-steel or steel decks. **Compact folding handles** collapse to save space when storing the trucks. **Extendable decks** can be pulled out to allow the trucks to carry large items. **Narrow decks** can maneuver in aisles and other tight spaces. **Tall handles** prevent tall stacks of packaged goods and other boxed items from falling off the trucks as they're moving.

High-Strength Stainless-Steel-Deck Platform Trucks

Jamco Products

GA GRAINGER APPROVED

Platform trucks with a stainless-steel deck are stronger and more corrosion-resistant than aluminum-deck platform trucks, and they have a polished finish that eases cleanup. Suitable for labs, medical facilities, food- and beverage-manufacturing plants, and other areas where the trucks will be cleaned and washed down often. All have two swivel and two rigid casters.

General Purpose Wooden-Deck Platform Trucks

Jamco Products WESTWARD Dayton

Wooden-deck platform trucks make less noise and are less likely to damage delicate materials and finishes on products carried on the trucks than metal-deck platform trucks. **General purpose** trucks are suitable for a wide range of applications. They have two swivel and two rigid casters unless noted otherwise. **Narrow tall-handle** trucks are used for moving tall stacks of packaged goods and other boxed items. They have a combination of two rigid casters and four swivel casters and can pivot 360° when maneuvering in warehouse aisles and other tight spaces.

High-Capacity Wooden-Deck Platform Trucks

Jamco Products

These wooden-deck platform trucks have large, rigid axle-mounted wheels that let them bear heavier loads and start rolling more easily when loaded than trucks with smaller wheels of a similar construction. They also have swivel casters that allow them to maneuver around curves and obstacles. Suitable for moving molds, dies, metal sheets and coils, and other heavy industrial equipment.

Steel-Deck Wagon Trucks

Wagon trucks are typically pulled instead of pushed, and they have a front-mounted handle that lets users guide heavy loads and maneuver them around corners. **Lipped** deck has a lipped edge that stops items from sliding off it. **Flush** deck lets heavy items slide onto or off of the deck to reduce effort during loading and unloading. **Flow-through** deck has openings that let debris and liquid fall through it to keep the trucks clean when used in dirty or wet areas. **Towable** trucks have a T-bar handle with a ring and can be manually pushed or connected to towing equipment for occasional low-speed towing applications. All of these trucks are constructed of 12-ga. steel and all ship assembled, except No. 26Y475.

Wagon Trucks with Flow-Through High-Volume Side-Panel Metal Deck

- Overall height, with sides: 21 ½ in (No. 12X312); 26 in (No. 12X313); 24 in (No. 12X315)

The perforated metal deck on these wagon trucks has openings that let debris and liquid fall through it, which helps keep the wagons clean when used in dirty or wet areas. The wagons' side walls stop loads from falling off and can be folded down or removed to reduce straining and lifting when loading or unloading heavy items. The trucks ship unassembled.

Wire-Spool Dispensing Cart

This cart has spindles that hold spools of wire and allow quick access for replacing spools. Wire guides under the cart's work surface hold wire ends for dispensing and cutting. The cart has louvered panels for attaching bins, shelves, and other optional accessories that hold items that are not stored on spools. Shipped assembled. 1200-lb. load capacity. Comes with two swivel and two rigid casters.

GB Gardner Bender

Two-Wheel Wire-Dispensing Carts

These carts have two semipneumatic wheels and can be tilted and rolled like a hand truck. They have multiple spindles that hold wire and other materials stored on reels or spools. The spindles can be removed when replacing spools and reels. Wire guides keep the ends of wires accessible and organized for dispensing.

Panel Trucks

GA GRAINGER APPROVED · Dayton · LITTLE GIANT · Rubbermaid Commercial Products · DURHAM MFG Est. 1922

The frame on these trucks supports long, thin panels or sheets. Also known as drywall carts, these trucks are used to store or move items such as drywall, plywood, glass panels, and partitions. The trucks' flush platform lets items slide onto and off of the carts during loading and unloading. All have two swivel and two rigid casters, unless noted otherwise. **A-frame** and **sloped-frame** trucks allow panels to lean toward the trucks' center to keep them balanced during transport. Sloped-frame trucks can be loaded from one side. A-frame trucks can be loaded from two sides. **Single-height vertical** trucks keep panels oriented at 90° to the trucks' deck and are all the same height. **Adjustable rails** can be repositioned or removed to make room for items of different sizes and save space when storing the trucks. **Fixed rails** uprights cannot be moved. **Nonmarring rails** have a vinyl coating that helps prevent damage to delicate finishes or surfaces.

V-Groove Cradle-Style Bar and Pipe Truck

V-shaped cradle holds large sizes or bundles of long materials and prevents round items from rolling off the truck. Also known as a bar and pipe dolly and big-wheel cradle truck, this truck has two large pneumatic wheels that can roll over rough terrain or flooring. The truck's T-handle is used to push the truck and control its movement, and it is offset so the operator walks alongside the truck instead of behind it.

Table Carts

Vertical divider rails span the length of these carts to support round and rectangular tables that are being transported on the carts. The rails can be removed to reduce effort during loading and unloading. The carts' frames have been coated with smooth vinyl to prevent damage to tables on the carts.

Manual and Motorized Wheelchair Shopping Carts

These carts carry customers and their purchases as they shop. The carts have a wire basket where riders can place items, and they have vinyl-covered seats that can be wiped down for cleaning.

Manual Wheelchair Cart—Wheelchair cart is propelled by hand and can navigate tight spaces such as aisles more easily than motorized carts. 315-lb. total weight capacity.

Value Shopper and Smart Shopper Motorized Carts—Motorized carts are propelled by a battery-powered electric motor and require less effort to move than wheelchair carts. 625-lb. total weight capacity.

Shopping Carts and Cart Corrals

WIRE SHOPPING & PLATFORM CARTS

Two-tier cart has two vertically stacked wire baskets that can hold groceries and other items. This compact cart can navigate crowded aisles and tight spaces more easily than platform shopping carts. Made from powder-coated steel. **Platform carts** have a flat wire deck that holds large or bulky flat items such as cartons, bulk containers, and large bags. All are made from zinc-plated steel.

CART CORRALS

Galvanized steel cart corrals keep shopping carts organized and contained when not in use. They help prevent loss or damage to carts by providing a place for customers to return empty carts. No tools required for assembly.

Medical Exchange Carts

Exchange carts are used to transport and store linens and supplies in healthcare facilities. Wire mesh shelves and walls let air circulate through the carts, keep their contents visible, and allow dirt to fall through to keep them clean. The shelves' height can be adjusted to fit different supplies based on the changing needs of patient populations. Bins, dividers, and other optional accessories can be added to organize items on the shelves. All have two standard swivel casters and two swivel casters with a brake, unless noted otherwise.

Space-Saving Basket Trucks with Removable Mildew-Resistant Vinyl Liner

The frame on these basket trucks collapses to save space when storing the trucks. The trucks' removable vinyl liners attach to the frame and can be replaced with a new one when they become damaged or dirty. Vinyl liners resist mold, mildew, UV-damage, and tears. They are also flame-retardant, but other parts of these trucks may not be. No. 20UY93 has compartments for sorting materials. All have four swivel casters.

Pallet Trucks

GA GRAINGER APPROVED

Dayton®

Dayton® pallet trucks feature a cushion grip with a 3-position lever and a flow valve for controlled lowering. Push rods are fixed with no adjustment needed. 4mm-thick steel with reinforced fork bracing and sealed ball bearings on wheels.

Standard—Nos. 490Z06 and 445K83 have a quick-lift operation for loads under 300 lbs. No. 12U123 includes a fingertip-actuated hand brake for safety and security on ramps or inclined surface. No. 30LU68 has longer 70" forks.

Low-Profile—For easy access to pallets with 2"H opening.

Narrow—Narrow fork design with entry glides and exit rollers allows easier access to smaller pallets with decks up to 24"W.

YELLOW JACK·IT™ GRAINGER APPROVED Dayton

Special-Application Pallet Trucks

Adjustable Width—Adjust the width of forks to accommodate all types of pallets. No. 36N996 adjusts manually without tools.

All Terrain—Lightweight, strong tubular frame truck evenly distributes loads. Large pneumatic wheels roll over most surfaces. Easy-to-operate 3-position handle.

Box Guard—Prevents accidental lifting of second pallet by lowering frame guard and reducing fork length by 9". Holds cargo in place.

Confined Space—Operator can use foor or hand to operate dual pump. Foot pump folds away for storage.

Quiet Operation—Ultra-quiet operation (less than 60 dB) for use in hospitals.

Disc Turntables

GA GRAINGER APPROVED

- Rotate pallets 360°
- Steel construction

Benchtop Turntables allow workers to quickly gain access to the different sides of the item being worked on. Plates rotate smoothly on ball bearings and include a serrated rubber top cover. Manual Turntables allow efficient loading and unloading of both pallet trucks and forklifts. Safety detent lock prevents the carousel from rotating when not in use.

Pallet Lifters

Dayton

- Red powder-coat finish, except No. 2PLJ2 is stainless
- Cylinder bypass valve prevents overloading

Automatic brakes engage for stability when lift height exceeds 12".

MANUAL

Nos. 11K273 to 11K276 have captured scissor rollers and a foot pump. Nos. 11K277 and 11K278 feature an adjustable hydraulic lift, 3" polyurethane load rollers, and fingertip controls.

ELECTRIC

Powered units provide easier and faster lifting. Feature 3" polyurethane load rollers and fingertip controls, plus battery and charger.

Hydraulic Scissor Lift Carts

- Include hydraulic foot pump
- Casters (2 rigid, 2 swivel w/brake)
- Lowered and raised heights are measured with platform in level position

STEEL

Dayton®

- Down speed control valve
- Internal hydraulic velocity fuse in each cylinder

Southworth® Dandy Lift™—Self-locking lowering control provides precise lowering. No. 4YZ95 has double scissors.

STEEL TILTING PLATFORM

Heavy-duty platforms have 45° tilt.

STEEL ROLLING PLATFORM

Steel roller balls raise so loads can easily slide on and off the surface. Balls can also be lowered into the table for stability during transport.

STAINLESS STEEL

Velocity fuse stops free fall of platform in case of hydraulic failure. Scissor legs, pump assemblies, and hydraulic cylinders are zinc-plated. Nos. 2TKY3 and 2TKY4 have chrome-plated pump pedals, pump assemblies, and hydraulic cylinders.

Stationary Electric Scissor Lift Tables

- Electric lifts are 115V

Dayton®—Low-profile tables feature a lowered height of 4 5⁄16" or less allow to allow easy loading and unloading with a hand pallet truck (requires an optional ramp). All tables include a 4-sided electrical perimeter toe guard and hand control.

Southworth®—Furnished with foot switch control with safety cover and control cord. Adjustable down speed. Lift cylinder vented to reservoir. Maintenance-free pins, rollers, and bushings lubricated-for-life. Nos. 4ZC14, 4ZC15, 19A872 and 19A873 have a comfort-molded edge platform. Turntable Lift No. 4ZC15 features a 43"-dia. flush-mount turntable in platform top. Nonelectric Lift No. 19A867 features an attachment that allows table to be raised or lowered with the use of an electric drill.

General Purpose Hand Trucks

General purpose hand trucks are upright wheeled carts that let one person move large or heavy loads, such as boxes, crates, bins, equipment, and raw materials. Also known as dollies, hand trollies, or stack trucks.

Steel hand trucks have steel frames and nose plates and are suitable for a wide range of tasks.

Corrosion-resistant stainless steel hand trucks will not rust when exposed to water, cleaning chemicals, and other corrosives.

Lightweight corrosion-resistant aluminum hand trucks weigh less than steel or stainless steel hand trucks and will not rust when used in damp or wet environments.

Standard hand trucks are the basic option for general purpose tasks.

Easy-load hand trucks have nose plates with bevels or other features that help them slide under loads easily.

Easy-load and tilt hand trucks have foot kicks that can be used to push the bottom of the trucks forward as the trucks are tilted back, which makes it easier to start loaded trucks rolling. They also have nose plates with bevels or other features that help them slide under loads easily.

Nonmarring hand trucks have a frame coating and wheel guards that prevent the trucks' frame or wheels from rubbing against items on the trucks and damaging them.

Ergonomic tilt-back hand trucks have two swivel casters mounted on a frame extension behind their two primary wheels. The hand trucks rest on all four wheels when tilted back, which makes it easier to keep them upright when moving heavy loads and lets users open doors and do other tasks without having to support the hand trucks or return them to vertical and then re-tilt them again.

All-terrain hand trucks have large-diameter flat-free wheels that absorb shock and will not puncture when rolling over uneven ground, cracked floors, gravel, thresholds, and obstructions.

Modular aluminum hand trucks allow users to replace parts of the hand trucks as they become worn or damaged.

Welded hand trucks do not allow users to replace components of the hand trucks when they become worn.

Extended folding nose hand trucks have an extension that increases the length of their nose plate to allow the trucks to carry bulky loads like cartons of snack foods or suitcases. The extensions fold up to save space when not in use.

Narrow-aisle hand trucks have a slim profile and can maneuver better in tight spaces than wider hand trucks.

Stair climber kits allow users to install rear stair climbers on the hand trucks to help them roll smoothly over stairs and curbs.

Folding nose plate extension kits let users install a folding extension on the hand truck's nose plate to increase its length.

Nose plate expander kits let users install an extension on the hand truck's nose plate to increase its length and width.

GA GRAINGER APPROVED

Powered 2-Position Aluminum Convertible Hand Trucks

The battery-powered motor on these hand trucks reduces effort when moving heavy loads. Lowering the motor throttle activates a braking mechanism that slows the trucks on ramps and inclines, and the trucks stop rolling when the throttle is at zero. These convertible hand trucks can be used as an upright two-wheel hand truck or a horizontal four-wheel platform truck. They are made from aluminum, which weighs less than steel and resists rust when used in damp or wet environments. Ship assembled and include rechargeable battery pack and charger.

MAGLINER® GA GRAINGER APPROVED Dayton

Convertible Hand Trucks

Also known as multiposition hand trucks, these hand trucks can be used as an upright hand truck or as a platform truck, allowing them to carry a wider range of items than other types of hand trucks. Load capacity may change depending on the configuration they are being used in.

Extra-Versatile 4-Position Convertible Hand Trucks

GA GRAINGER APPROVED

Four-position convertible hand trucks can be used as an upright hand truck, a platform truck, a U-boat truck, and a dolly. The trucks' frame can be extended in all positions to accommodate a wide range of items. Also known as 8-in-1 hand trucks, these hand trucks have a steel frame, two no-flat rear wheels, and two soft-tread front casters with brake. They require assembly and are used in maintenance, warehouse, storage facility, contractor, live performance, HVAC, delivery, and trade show applications.

Ergonomic Tilt-Back No. 34D673

Spark- & Corrosion-Resistant No. 4ZH90

Cylinder Hand Trucks

Ergonomic tilt-back hand trucks are made from steel and have two swivel casters mounted on a frame extension behind their two primary wheels. The hand trucks rest on all four wheels when tilted back, which makes it easier to keep them upright when moving heavy loads.

Spark- and corrosion-resistant hand truck is made from plastic and will not create sparks that might ignite volatile gases such as welding gases. Won't rust when used in wet or damp environments.

Standard hand trucks are made from steel and are suitable for routine applications.

Ergonomic Tilt-Back Welding Hand Truck No. 6W055

Firewall Welding Hand Truck No. 34D682

Welding Hand Truck No. 5WXD4

Welding Cylinder Hand Trucks

Hold two gas cylinders and come with a chain or strap for securing cylinders. These steel trucks can be used to move oxygen and acetylene cylinders in welding applications.

Ergonomic tilt-back welding cylinder truck has two swivel casters mounted on a frame extension behind its two primary wheels. Truck rests on all four wheels when tilted back, which makes it easier to keep it upright when moving heavy cylinders. Suitable for temporary storage applications (less than 24 hours).

Firewall welding cylinder trucks have a steel firewall that creates a barrier between cylinders on the hand trucks to help prevent fires or explosions while also protecting cylinders from damage during transport and storage. Suitable for extended-storage applications (more than 24 hours).

Welding cylinder hand trucks are suitable for temporary storage applications (less than 24 hours).

Powered Drum Truck No. 448F53

Standard Pail Truck No. 9MK73

Ergonomic Tilt-Back Drum Truck No. 34D654

Pail and Drum Hand Trucks

Come with hooks or straps to secure items.

Standard hand trucks are suitable for general purpose applications.

Powered hand trucks have a battery-powered motor that reduces effort when moving loaded trucks.

Knock-down hand trucks are sold unassembled and cost less to ship.

Ergonomic tilt-back hand trucks have two swivel casters mounted on a frame extension behind their two primary wheels. The hand trucks rest on all four wheels when tilted back, which makes it easier to keep them upright when moving heavy loads.

Corrosion-resistant hand trucks resist rusting when exposed to frequent washdowns or cleaning.

Appliance Hand Trucks

The short, wide nose plate on these hand trucks slides under the edge of an appliance and supports it as it's moved on the trucks. The trucks have rear stair crawlers that roll smoothly over stairs and curbs. They also have a dual-loop handle and come with belts for securing loads to the trucks. **Tilt-back hand trucks** have two swivel casters mounted on a frame extension behind their two primary wheels. The hand trucks rest on all four wheels when tilted back, which makes it easier to keep them upright when moving heavy loads and lets users open doors and do other tasks without having to support the hand trucks or return them to vertical and then re-tilt them again.

- 4 swivel casters

HARDWOOD

Double-ball raceway, hard rubber casters are secured with nylon locknuts. Natural color. Nos. 48J062 through 48J065 have towing eye.

FIBERWOOD

2 hand holes for ease of moving. PVC edges. Black color.

Back & Front-Support Machine Rollers

For transporting heavy industrial machinery.

BACK & FRONT STEERMAN SKATES

Front skate trolleys work with the steering handle and the center turntable which is supported on a large-diameter thrust bearing. Front skates feature a rugged steel frame, rubber grip on handle, and a rubber pad. Front and back units can be mixed and matched to accommodate varying load capacities.

ROTATING DOLLIES

Rotate a full 360° for ultimate maneuverability of heavy loads in confined spaces. Steel dollies are 4 5/16" high. No. 4YCR8 is 27"L x 20 5/16"W and has 3 wheels; Nos. 4YCR9 is 29 1/2"L x 22 1/8"W and has 5 wheels.

Machine Roller Kits

All kits include 4 swivel-base steel rollers, 2 steering handles, and a lockable steel case (except Nos. 2MWK3 and 2MWK4 which do not come with case).

Dayton®—Nos. 2MPR1 to 2MPR3 have spring-loaded locks at 45° increments.

Hilman—Nos. 2MWK5 to 2MWK8 have rollers constructed of high-impact nylon that will not damage finished floor surfaces.

Hydraulic Pumps, Toe Jacks, and Rollers

Hydraulic Pumps—Enable 1-person operation or increasing load capacity with use of multiple jacks. Synchronous pressure pumps provide the ability to safely lift heavy loads with multiple toe jacks simultaneously.

Hydraulic Toe Jacks—Made of high-grade stainless material. Include cast-iron toe, antislip pad on load surface, coupling adapter for remote operation of 2 or more jacks with a pump, and telescopic handle. Toe hook can be height-adjusted to the lifting point. Safety valve prevents overloading. Meet ASME/ANSI standards.

Hydraulic Toe Jack

Caster Selection Guide

Swivel Caster: Caster raceway capable of rotating 360°.

Rigid Caster: Fixed caster without a raceway, that can roll forward or backward, but restricted from swiveling 360°.

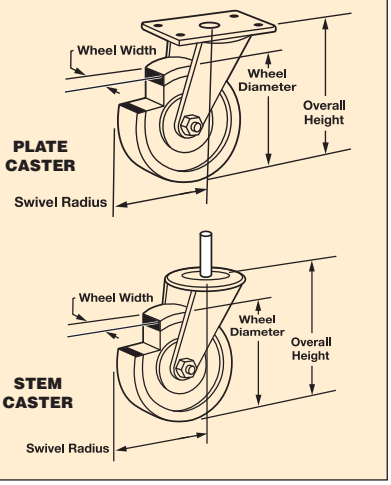
Kingpinless Caster: Swivel caster constructed without a kingpin, provides a superior raceway for shock conditions.

Bolt Hole Caster: Stemless caster where a standard bolt is inserted into the hole and bolted to the equipment.

Pneumatic Caster: Air-filled wheels, designed for low-speed manually moved applications, providing a cushioned ride, shock absorption, and quiet operation.

Semipneumatic Caster: Extra-thick, solid, soft rubber tire has no air and eliminates the risk of a flat tire. Designed to reduce the vibration and shock caused by floor surfaces which are not smooth.

Solid Rubber Wheel Caster: Designed for high-capacity applications, featuring a solid tire construction.



Brake: Prevents movement of the caster wheel. Not designed to stop moving equipment, nor intended for use on ramps or inclines.

4-Position Directional-Lock: Locks the swivel of the caster to a rigid position, for straight line travel.

Total-Lock: Simultaneously locks both the swivel and wheel of the caster to hold equipment in place.

Flat-Free Wheel: Solid, super elastic solid rubber tire provides shock-absorption and load handling characteristics similar to a pneumatic tire with the benefit of never going flat.

Wheel Size & Overall Height

Wheel Material Guide

Cast-Iron: High-capacity and abrasion-resistant for easy rolling and long service life on concrete.

Ductile-Iron: Superior resistance to breakage, cracking, and chipping for long service life in the most severe of applications.

Forged-Steel: Indestructible in normal applications and long service life. Used where floor protection is a secondary consideration, or for use on steel plates.

Glass-Filled Nylon: Will not chip, absorb water, or breakdown in caustic environments.

Neoprene: High resistance from oil and chemicals while providing sufficient cushioning to substantially lower or eliminate shock, vibration, and noise levels.

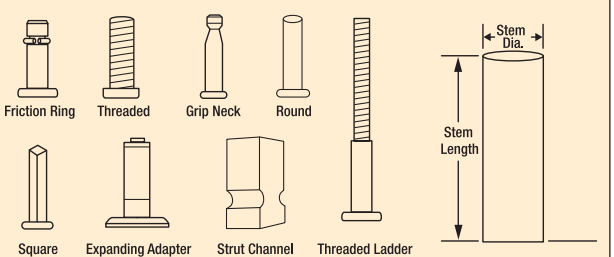
Nylon: Withstands solvents, corrosive environments, and temperature extremes.

Phenolic: Highly resistant to oil, grease, gasoline, and mild acids. Recommended for use on smooth concrete. Not recommended for wet applications or use over rough surfaces.

Polyolefin: Lightweight, one-piece solid sanitary design suited for use in wet and corrosive applications.

Polypropylene: Resists absorption and withstands most chemicals and solvents.

Polyurethane: Easy-rolling wheels, cushion loads, protect floors, and offer superior chemical resistance.



Rubber: Long-wearing wheel provides floor protection and quiet operation.

Stainless Steel: Strong and durable design, ideal for use in a wet, corrosive, or sanitary environments.

Steel: Provides strength and shock resistance with long service life and economy for use in rough service conditions.

Thermoplastic Rubber (TPR): Chemical- and water-resistant, absorbs shock and protects floors, while providing easy rollability.

E = Excellent G = Good F = Fair X = Not Recommended

Wheel/Tread Hardness Rating

Measures the hardness of the wheel material—the higher the number, the harder the material. The preferred method is using either the Shore A or Shore D scale.

Load Rating

Load Rating is the maximum weight (lb.) each caster can support individually. To determine the appropriate rating for your application, divide the total weight of the load by the number of casters that will support it. It is recommended that you utilize a safety factor and multiply your load capacity by 1.33. It is important to choose a caster with a capacity that exceeds, rather than meets, load requirements.

$$\text{Load Rating} = \frac{(\text{Load Capacity} \times 1.33)}{\text{No. of Wheels}}$$

GA GRAINGER APPROVED

Light-Duty Standard Plate Casters

Light-duty standard plate casters install onto carts, dollies, food-service equipment, business machines, store fixtures, and similar equipment that will be moved manually at moderate speeds. Sometimes known as institutional plate casters, these casters have zinc-plated steel frames and are suitable for transporting relatively light loads along smooth, flat surfaces in offices, retail stores, schools, government buildings, and other settings where they won't encounter shock loading.

Light-Duty Standard Plate Casters for Furniture

Swivel casters mount onto chairs, furniture, and other office equipment that will be moved manually at moderate speeds. The casters have a decorative frame finish that enhances the look of the furniture or equipment. Also known as institutional plate casters, these casters are suitable for transporting light loads along smooth, flat surfaces in offices and other areas where they won't encounter shock loading.

Low-Profile and Easy-Turn Standard Plate Casters

Low-profile standard plate casters install onto equipment that needs to stay close to the ground to maximize its stability while rolling. Easy-turn standard plate casters each have two wheels mounted on one axle, which reduces friction between the floor and the wheels and allows the casters to swivel more easily than single-wheel casters. **Light-duty** and **medium-duty** casters have steel frames and are used on carts, business machines, and other equipment that will be moved manually at moderate speeds along smooth, flat surfaces in areas where the casters won't encounter shock loading.

Swivel Caster w/ Total Lock No. 416P20

GA GRAINGER APPROVED

Debris-Resistant Standard Plate Casters

Debris-resistant standard plate casters have thread guards that stop debris from getting into the casters' axles and damaging or contaminating them. This helps extend the casters' life when used in dusty or dirty environments. These casters mount onto carts, dollies, tables, storage racks, and other equipment that will be moved manually at moderate speeds. They are suitable for transporting loads along smooth, flat surfaces in areas where they won't encounter shock loading, such as laundry rooms, textile factories, offices, retail stores, schools, and government buildings. **Light-duty** casters are also known as institutional casters. **Medium-duty** casters can typically bear more weight and withstand more industrial conditions than light-duty casters.

GA GRAINGER APPROVED

Heat-Resistant Standard Plate Casters

Heat-resistant standard plate casters have hard nylon wheels and can withstand continuous exposure to dry heat up to 480°F. They are used in areas such as bakeries, laboratories, light manufacturing facilities, pharmaceutical plants, and electronics parts testing sites. The casters have zinc-plated steel frames and mount onto racks and other equipment that will be moved manually at moderate speeds. These swivel casters can rotate up to 360°, allowing equipment to change directions while rolling.

Corrosion-Resistant Standard Plate Casters

Corrosion-resistant standard plate casters have stainless-steel frames that resist rusting and withstand exposure to corrosives like water or cleaning chemicals used in food-service facilities, pharmaceutical plants, laboratories, cleanrooms, hospital waste areas, marine environments, and similar settings. The casters mount onto carts, dollies, tables, racks, and other equipment that will be moved manually at moderate speeds. They are suitable for transporting loads along smooth, flat surfaces in areas where they won't encounter shock loading. **Light-duty** casters are also called institutional casters. **Medium-duty** casters can typically bear more weight and withstand more industrial conditions than light-duty casters.

Medium-Duty Standard Plate Casters

Medium-duty standard plate casters mount onto carts, dollies, platform trucks, tool boxes, storage racks, and other industrial equipment that will be moved manually at moderate speeds. They have zinc-plated steel frames and are suitable for transporting moderately heavy to heavy loads along smooth, flat surfaces in industrial settings where the casters won't encounter shock loading, such as shops, docks, warehouses, waste-disposal areas, and manufacturing plants.

★GA GRAINGER APPROVED

Heavy-Duty Standard Plate Casters

Heavy-duty standard plate casters have zinc-plated welded steel frames and a stronger kingpin than light-duty or medium-duty standard plate casters. They withstand heavy loads and frequent use and are mounted onto racks, utility trucks, production jigs, fixtures, and other heavy equipment used in industrial settings where the casters will be rolling along irregular or rough surfaces and may encounter shock loading.

HAMILTON. GA GRAINGER APPROVED

Extra-Heavy-Duty Standard Plate Casters

Extra-heavy-duty standard plate casters have forged steel frames and forged or welded steel kingpins and can bear heavy loads. They tolerate more frequent use and withstand more shock and impact from rolling over rough or uneven ground than light-duty, medium-duty, and heavy-duty standard plate casters. The casters are installed onto the bottom of dumpsters, trailer frames, die carts, and other heavy equipment used in industrial areas such as manufacturing plants, construction sites, and assembly plants.

Super-Duty Standard Plate Casters

Super-duty standard plate casters have forged steel frames and forged steel kingpins and can bear very heavy loads. They tolerate more frequent use and withstand more shock and impact from rolling over rough or uneven ground than light-duty, medium-duty, heavy-duty, and extra-heavy-duty standard plate casters. These casters mount onto die carts and other heavy equipment used in shipbuilding sites, aerospace plants, automotive factories, steel mills, heavy equipment manufacturers, and other industrial operations.

Standard Plate Caster Kits

Standard plate caster kits contain parts for replacing worn or damaged casters on equipment or adding new casters to equipment. The kits each include two swivel plate casters and two rigid plate casters that are used together to allow the equipment to both maneuver around curves and obstacles and maintain a straight course while rolling. Each kit's load rating is the sum of the load ratings for all the casters in the kit. All the casters in these kits have roller bearings, which are suitable for moving heavy loads. **NSF-listed** standard plate caster kits satisfy the National Sanitation Foundation's (NSF) rigorous testing requirements for casters that are used in environments where they will be exposed to frequent washdowns, oils, or chemicals.

Kingpinless Plate Casters

Kingpinless plate casters do not use a kingpin to hold the caster together. They distribute weight more evenly, roll more smoothly, tolerate higher speeds, and can better withstand impacts and shock forces than standard plate casters, and they are suitable for industrial applications where they will be rolling on rough or uneven surfaces. **Light-duty triangular-mount** casters have a triangular mounting plate and can be installed in areas where a caster with a square mounting plate would not fit. **Medium-duty** casters have zinc-plated steel frames and are suitable for pushing and lightly towing carts and trucks in assembly lines, metal fabrication, and waste- and scrap-disposal applications. **Heavy-duty** casters have zinc-plated or powder-coated steel frames and are suitable for pushing and towing carts, trucks, and equipment in heavy manufacturing plants and automotive assembly lines. **Extra-heavy-duty** casters have thick steel frames and are suitable for pushing and towing carts, dollies, trailers, heavy machinery, storage tanks, gantry cranes, and other equipment in heavy industrial operations. **Super-duty** casters are suitable for pushing or towing equipment such as gantry cranes, storage tanks, and large machinery in automotive and aerospace manufacturing, shipbuilding, and airport ground support operations. **Easy-swivel extended-lead** casters take less effort to start rolling, provide better tracking, and create less chatter (wobble) than plate casters with standard-length leads. **Easy-turn** casters each have two wheels mounted on a single axle, which reduces the friction between the floor and the wheels and allows them to swivel more easily than single-wheel casters. **Corrosion-resistant** casters have stainless-steel frames that resist rusting when used in areas where they will be exposed to water, cleaning chemicals, and other corrosives.

Corrosion- & Heat-Resistant Swivel No. 33J044

Medium-Duty Swivel w/ 4-Position Directional Lock No. 489C48

GA GRAINGER APPROVED

NSF-Listed Sanitary Plate Casters

These casters satisfy the National Sanitation Foundation's (NSF) rigorous testing requirements for casters that are used in environments where sanitary conditions must be maintained. They mount onto carts, prep tables, food-service equipment, racks, and similar items that will be exposed to frequent washdowns, oils, or chemicals. **Light-duty** casters have zinc-plated or nickel-plated steel frames and are suitable for transporting relatively light loads over smooth, flat surfaces. **Medium-duty** casters have thick steel frames and can bear heavier loads, tolerate more frequent use, and withstand more shock and impact than light-duty casters. They are suitable for transporting moderately heavy to heavy loads over smooth, flat surfaces. **Corrosion-resistant** casters have stainless-steel frames that resist rusting when exposed to water, cleaning chemicals, and other corrosives. **Heat-resistant** casters have nylon wheels that can withstand exposure to high temperatures up to 550°F. **Debris-resistant long-swivel-life** casters have a dust cap that stops debris from entering the casters' swivel raceways and preventing the caster from swiveling.

Quiet-Roll Medical Plate Casters

Medical plate casters have precision ball bearings that provide smooth rolling and minimize noise that can disturb patients in medical settings. They also have thread guards that keep debris from getting into the casters' axles and damaging them. These casters mount onto equipment used in hospitals, rehabilitation centers, pharmacies, laboratories, and similar medical facilities. **Antimicrobial corrosion- and debris-resistant** casters are made from stainless steel and resist corrosion when exposed to water and chemicals. The casters' wheels are impregnated with an antimicrobial compound that prevents odor-causing, damaging microbes from growing on them. Suitable for use where high standards of cleanliness must be maintained and equipment will be washed down frequently. **General purpose** casters are suitable for a wide range of applications in hospitals and other medical facilities. **High-performance** casters have precision ball bearings and provide smoother, quieter rolling than other types of medical plate casters. They also have nylon frames that resist chemicals and corrosion and weigh less than metal frames. Suitable for use on equipment that will be moved frequently and may be exposed to chemicals. **Low-profile easy-turn** casters are used on patient lifts and other equipment that must stay low to the ground to maximize its stability. These casters have two wheels mounted on a single axle, which reduces friction between the floor and the wheels and allows the casters to swivel more easily than single-wheel casters.

Maintenance-Free Plate Casters

Maintenance-free plate casters have sealed precision ball bearings in their swivel raceways and wheels that do not need to be routinely greased, which reduces time spent on maintenance and helps extend the casters' life. The casters roll quietly and require minimal force to start and keep them rolling. **Medium-duty** casters have zinc-plated steel frames and are used on carts, racks, and similar equipment that will be carrying moderately heavy to heavy loads over flat, smooth surfaces. **Shock-absorbing** casters have spoked wheels that absorb and distribute shock to prevent damage to the caster and minimize noise while rolling. **Heavy-duty** casters have zinc-plated steel frames and can bear heavier loads, tolerate more frequent use, and withstand more shock and impact than medium-duty casters. They are suitable for carts, trucks, towline fixtures, and other equipment that will be pushed manually or towed by powered equipment in manufacturing, aerospace and automotive assembly, warehouses, and similar industrial applications.

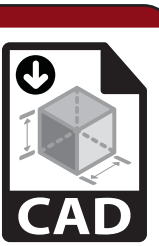
Shock-Absorbing Plate Casters



These casters have spring-loaded suspensions that absorb shocks and vibration when rolling over obstacles or rough terrain. They help prevent damage to the equipment the casters are attached to as well as any shock- or vibration-sensitive cargo that is being transported on it. Each caster's suspension can be adjusted to achieve the smoothest ride possible. **Quiet-roll** casters provide smooth, quiet rolling in areas where noise levels are a concern. **Medium-duty** casters are used on carts, trucks, racks, and trolleys that will be moving moderately heavy loads in manufacturing plants, laboratories, and computer and networking rooms. **Heavy-duty** casters can withstand heavier loads and more frequent use than medium-duty casters. They are used on racks, trolleys, and fixtures in manufacturing plants, computer and networking rooms, sound and lighting applications, and other industrial settings. **Extra-heavy-duty** casters can bear very heavy loads and withstand more shock and impact than heavy-duty casters. They are used on airport ground-support equipment, assembly line dollies, and production equipment in manufacturing plants and other industrial environments.

GA GRAINGER APPROVED HAMILTON

Pneumatic-Wheel Plate Casters

Pneumatic-wheel plate casters have air-filled wheels that absorb shock and vibration and reduce noise as they roll. They are suitable for moving fragile or vibration-sensitive loads on equipment that is traveling over rough or uneven surfaces in indoor and outdoor areas. All swivel casters have a double-ball bearing raceway. Casters with a brake have an over-the-wheel strap brake. **Medium-duty** casters are used on carts, trucks, and equipment in warehouses, transportation facilities, lawn and garden centers, and hospitality sites. **Extra-heavy-duty** casters bear heavier loads, withstand rougher terrain, and absorb more shock and impact than medium-duty casters. They are used on heavy carts, trucks, and equipment in towing applications, such as aerospace ground support, airport baggage trolleys, and manufacturing and maintenance operations.

GA GRAINGER APPROVED GREENLEE

Semipneumatic-Wheel Plate Casters

These casters have semipneumatic wheels that absorb shock and vibration and will not go flat if they are punctured. They are used on carts, trucks, and similar equipment that will be moving fragile or vibration-sensitive loads over rough or uneven surfaces in areas with sharp debris, such as warehouses, transportation facilities, lawn and garden centers, and hospitality sites.

GA GRAINGER APPROVED MARASTAR HAMILTON

Flat-Free-Wheel Plate Casters

Flat-free-wheel plate casters have solid wheels that absorb more shock and vibration than semipneumatic wheels and will not go flat if punctured. They are suitable for moving fragile or vibration-sensitive loads and for traveling over rough or uneven surfaces in areas with sharp debris. **Medium-duty** casters can bear moderately heavy loads and are used on carts, trucks, and similar equipment in warehouses, transportation facilities, lawn and garden centers, and hospitality sites. **Heavy-duty** casters can bear heavy loads and are used on heavy carts or trucks in warehouses, transportation facilities, and manufacturing sites. **Extra-heavy-duty** casters can bear very heavy loads and are used on heavy carts, trucks, and equipment in towing applications for aerospace ground support, shipbuilding, automotive manufacturing, and maintenance operations.

Leveling Plate Casters

GA GRAINGER APPROVED

Leveling plate casters are used on equipment that will be moved often but must stay stationary when in use. Each caster has a leveling pad that can be raised to allow it to roll and lowered to prevent it from rolling, and a thumbwheel adjusts the pad's height to level the equipment. All are swivel casters that can rotate 360°, and all have impact-resistant nylon wheels. **General purpose** casters are used on furniture and equipment in high-automation manufacturing, medical, retail, and laboratory settings. **High-adjustability extended-stem** casters have long leveling stems and can be adjusted to a greater range of heights than other leveling plate casters to accommodate very uneven floors or raise furniture or equipment high off the ground in areas such as food-processing plants, medical settings, pharmaceutical facilities, packaging and conveying operations, and laboratories. **Quick-engage pedal-style** casters have a foot pedal that users step on to quickly start or stop the casters from rolling. They are used on reconfigurable machinery and production lines in heavy manufacturing and industrial applications.

Note: For safety, working load cap. for 4-caster installations should not exceed 2 x individual caster load rating. Example: Working load cap. is 1100 lb. for 4 of No. 24WK16 (load rating is 550 lb. each).

HAMILTON

Track-Wheel Plate Casters

Track-wheel plate casters have wheels that fit into compatible steel tracks or rails. They mount to containers, racks, carts, and other equipment and provide precise control over movement and alignment when moving the equipment between two locations, such as from one machine to another, into and out of an oven, or between points on an assembly line. All swivel casters have double-ball hardened raceways. **V-groove** casters have wheels with a V-shaped tread that mates with a compatible angle-iron track. They have flat edges and can also roll on flat surfaces. **Single-flange** casters have wheels with one flange that guides them along a flat track or rail. They create less friction between the wheel and the track or rail than dual-flange track-wheel casters. **Dual-flange** have wheels with two flanges that guide them along a flat track or rail. They maintain their alignment better than single-flange track wheels in applications with impact loads, debris, or obstructions.

GA GRAINGER APPROVED

Inverted-Mount Plate Casters

Inverted-mount plate casters are installed with their wheels pointing up to create a low-friction surface for moving bulky and heavy loads. Groups of these casters are mounted in floor recesses in dock areas, airport cargo-loading areas, or aircraft to reduce the effort it takes to move and manuever large cargo containers on the floor. They can also be mounted on conveyors or portable dollies and fixtures that are used for handling large containers to provide multidirectional movement in transition, infeed, or outfeed sections. All are swivel casters and can rotate 360°, and all have precision ball bearings. **5VF59** has a **foot guard** that prevents toes and feet from slipping into the caster's mounting recesses and causing falls or injuries.

Threaded Stem Casters

Threaded stem casters screw into a hole, bracket, insert, or socket and are typically used to add casters on equipment where there is not enough room to attach a plate caster's mounting plate. All are swivel casters and can rotate 360°. **General purpose** casters are used on carts, furniture, storage cabinets, storage bins, display stands, appliances, retail fixtures, and other equipment in a wide variety of settings. **Extended-stem casters for ladders** are used on ladders, platforms, and similar equipment in areas such as warehouses, stockrooms, and loading docks. Each caster has an extra-long threaded stem with a spring-loaded assembly that allows the equipment to lower to keep it stationary when it's in use and raises the equipment when it's not in use so it can roll.

For information on selecting casters, see page 1194.

Maintenance-Free Expanding Stem Casters

Expanding stem casters can be installed into structural tubing with a range of diameters and don't need to be secured with bolts or pins. Each caster has a knurled nut that is tightened to expand the rubber sleeve on the caster's stem until it is large enough to firmly grip the inside of the tubing. The casters have sealed precision ball bearings that do not need to be routinely greased, which minimizes maintenance and extends the casters' life. Their lightweight nylon frames resist chemicals and corrosion, and they have thread guards that prevent dirt and debris from entering the casters and damaging them. Suitable for carts, racks, and equipment in medical facilities, pharmacies, laboratories, food-service areas, and other areas where the equipment will be moved frequently and may be exposed to water, chemicals, and debris. All are swivel casters that can rotate 360°, and all have a thermoplastic rubber tread.

Grip-Neck Stem Casters

Grip-neck stem casters install into a specially designed socket that grips the stem head for a secure hold. They are used on office furniture, cabinetry, retail displays, and other light-duty equipment made from wood or metal tubing that has these special sockets. **Ball-wheel** casters have a spherical wheel covered by a hood that hides dirt and scuffs. **Single-wheel** casters each have one wheel.

Friction-Ring Stem Casters

Each of these casters has a stem that presses into an appropriately sized hole or socket in tubes, pipes, wood, or brackets on furniture and equipment. A spring ring at the end of the stem expands to hold the caster in place once it's installed. The casters require few or no tools for installation and are suitable for applications where casters need to be replaced frequently. All are swivel casters that can rotate 360°. **General purpose** casters are used on carts, furniture, storage cabinets, storage bins, display stands, retail fixtures, and other equipment in a wide variety of settings. **Wall-protecting** casters have rubber rings that protect walls and other surfaces from damage if the casters collide with them.

Bolt-In Stem Casters

These casters each have a round or square stem that fits into structural framing made of metal tubing or angle iron. The shape and size of the stem determines the type of framing the caster will fit into, and the caster is held in place with a bolt or pin that is installed into cross-drilled mounting holes in the framing and the caster's stem. Casters with a **round stem** fit into round metal tubing on light-duty scaffolding, work platforms, workbenches, and tables. Casters with a **square stem** fit into square or octagonal metal tubing or angle iron on carts, racks, and similar equipment.

For information on selecting casters, see page 1194.

Low-Profile Easy-Turn Stem Casters

GRAINGER APPROVED

Low-profile easy-turn stem casters have small wheels and are used on equipment that must be kept low to the ground to maximize its stability while rolling, such as business machines, vending machines, store fixtures, lab equipment, refrigeration units, dollies, and server cabinets. The casters each have two wheels mounted on one axle, which reduces friction between the floor and the wheels and allows the casters to swivel more easily than single-wheel casters. All are swivel casters and can rotate 360°. **Friction-ring stem** casters have a stem that presses into an appropriately sized hole or socket in tubes, pipes, wood, or brackets on furniture and equipment. A spring ring at the end of the stem expands to hold the caster in place. **Threaded stem** casters screw into a hole, bracket, insert, or socket.

Furniture Stem Casters

GRAINGER APPROVED BEVCO

Furniture stem casters are installed on chairs, carts, fixtures, and similar items in offices, retail settings, and other areas where they won't be exposed to heavy loads, chemicals, liquids, or high temperatures. Soft-wheel casters are less likely to damage hard tile or wood floors than hard-wheel casters, and hard-wheel casters won't grab or snag carpets. **Friction-ring stem** casters have a stem that presses into an appropriately sized hole or socket in tubes, pipes, wood, or brackets on furniture and equipment. A spring ring at the end of the stem expands to hold the caster in place. **Threaded stem** casters screw into a hole, bracket, insert, or socket.

NSF-Listed Sanitary Stem Casters

These casters satisfy the National Sanitation Foundation's (NSF) rigorous testing requirements for casters that are used in environments where sanitary conditions must be maintained. They mount onto carts, prep tables, food-service equipment, racks, and similar items that will be exposed to frequent washdowns, oils, or chemicals. All are swivel casters and can rotate 360°.

Corrosion- and Debris-Resistant Stem Casters

Antimicrobial casters have wheels that are impregnated with an antimicrobial compound that prevents damaging or odor-causing microbes from growing on them. **Corrosion-resistant** stem casters will not rust or corrode in environments where the casters will be exposed to water or cleaning chemicals. **Debris-resistant** stem casters have a thread guard that stops debris from getting inside the caster and damaging or contaminating it. Suitable for racks, carts, and other equipment that will be used in areas where the casters will be exposed to dirt or frequent washdowns, such as laundry rooms, textile factories, food-service facilities, restaurants, offices, government buildings, and schools. All are swivel casters and can rotate 360°.

Medical Stem Casters

Medical stem casters roll quietly and smoothly to minimize noise that can disturb patients. They are used on beds, gurneys, IV poles, maintenance carts, food-service equipment, and other items in areas such as hospitals, rehabilitation centers, and laboratories. All are swivel casters and can rotate 360°. **Antimicrobial** casters have wheels that are impregnated with an antimicrobial compound that stops damaging or odor-causing microbes from growing on them. **Corrosion-resistant** casters will not rust or corrode when exposed to water or cleaning chemicals. **Debris-resistant** casters have a thread guard that keeps debris from getting inside the casters and damaging or contaminating them. **Maintenance-free** casters have sealed precision ball bearings that do not need to be routinely greased. **Single-wheel** casters each have one wheel. **Twin-wheel** casters each have two wheels that let them swivel and start rolling more easily than single-wheel casters.

Side-Mount Casters

Side-mount casters have vertical mounting plates that attach to the sides of gates, doors, fences, and other heavy equipment that won't support a traditional plate or stem caster. Also known as gate casters, these casters have a spring-loaded suspension that absorbs shocks to provide a smooth ride even when the casters are rolling on uneven surfaces. All have a rubber tread.

Bolt-Hole Casters

Bolt-hole casters have an open hole that provides versatility when mounting the casters to carts, furniture, storage cabinets, racks, and other equipment. They can be installed in tubing using compatible expanding mounting stems that get larger as they're tightened to keep the caster firmly in place, or they can be installed in wood using a lag bolt. **General purpose** casters are suitable for a wide variety of uses, including light-duty to medium-duty maintenance, contracting, janitorial, manufacturing, warehousing, and transportation applications. **Low-profile** casters are used on equipment that must stay low to the ground to keep it stable while rolling. **Easy-turn** casters each have two wheels, which reduces friction between the floor and the wheels and lets them swivel more easily than single-wheel casters. **Corrosion-resistant** casters have stainless-steel frames that withstand frequent washdowns or exposure to chemicals. **Heavy-duty long-swivel-life** casters each have a sealed swivel mechanism that prevents dust and dirt from entering them and making it hard for them to swivel. They also have thick steel frames that can bear heavier loads, tolerate more frequent use, and withstand more shock and impact than other types of bolt-hole casters.

Polyolefin Tread Wheels

Wheels with hard polyolefin treads will not mark or chip floor surfaces. These lightweight, corrosion-resistant wheels can withstand impacts and exposure to water, oils, and chemicals. They are also nonabsorbent and can be steam cleaned. Not suitable for prolonged exposure to heat or cold.

Phenolic Tread Wheels

No. 2RYZ4

No. 1UBN8

Wheels with hard phenolic treads resist oils, grease, gasoline, and mild acids and can handle heavy loads without damaging floors. For use in dry environments with smooth, hard flooring like concrete. Nos. 1UBN6 to 1UBN8 are laminated phenolic.

Rubber Tread Wheels

Wheels with rubber treads are suitable for most types of flooring. **Soft** treads offer more cushioning and better floor protection than hard treads. **Hard** treads provide more weight capacity, better abrasion resistance, and easier rolling than soft treads. **Nonmarking** treads will not leave marks on floors.

Aluminum wheel cores are lighter and more rust- and corrosion-resistant than iron cores. **Plastic, nylon,** and **polyurethane** wheel cores are lighter and more corrosion-resistant than metal cores. **Iron** wheel cores typically have high load capacities but must be used in dry environments. Wheels with a **rubber** core have a rubber tread and core that are molded as a single piece, eliminating the risk of the tread and core separating during use.

Nonmarking Soft Rubber Tread No. 5VF40

Nonmarking Soft Thermoplastic Rubber Tread No. 2RYW6

Soft Rubber Tread No. 3G268

Nonmarking Firm Thermoplastic Rubber Tread No. 26Y430

Polyurethane Tread on Plastic Core Wheels

These wheels have plastic cores, which weigh less and are more corrosion-resistant than metal cores. They can withstand exposure to water. The wheels' polyurethane treads resist abrasion and chemicals, roll quietly, and will not mark floors. **Glass-filled nylon** cores will not chip, absorb water, or break down in caustic environments. **Nylon** cores withstand exposure to solvents, corrosive environments, and extreme temperatures. **Polyurethane** cores provide excellent chemical resistance. **Rubber** cores absorb shock and resist impact.

Polyurethane Tread on Metal Core Wheels

These wheels have metal cores and typically provide higher weight capacities than wheels with plastic cores. The wheels' polyurethane treads resist abrasion and chemicals, roll quietly, and will not mark floors. **Aluminum** wheel cores are lighter and more resistant to rust and corrosion than iron or steel cores. **Iron** wheel cores provide good wear resistance and must be used in dry environments to avoid rusting. **Steel** wheel cores provide more wear resistance and have higher load capacities than iron or aluminum wheel cores. They must be used in dry environments to avoid rusting.

Nylon Tread Wheels

Nylon tread wheels are hard, lightweight, and will not mark floors. They withstand exposure to solvents, corrosive environments, and temperature extremes, but they are not recommended for heavily acidic or basic environments. The wheels can be steam cleaned and will not chunk or separate. **Ergonomic** wheels roll smoothly and provide very low resistance to rolling and swiveling. **Heat-resistant** wheels are made from reinforced nylon and withstand exposure to very high temperatures. **Nylon tread wheels for pallet jacks** are sized to fit pallet jacks and can carry heavy loads for their size.

Metal Tread Wheels

Metal tread wheels offer high weight capacities and withstand shock, abrasion, impact, rough use, and exposure to temperature extremes. They are suitable for moving heavy loads over rough terrain. The wheels' tread and core are made from the same material. **Iron** wheels withstand exposure to corrosive chemicals, grease, and oils better than steel. **Steel** wheels can bear heavier loads than iron wheels. **Heat-resistant** wheels have double-shielded maintenance-free bearings and an enamel coating that allow the wheels to withstand exposure to very high temperatures.

Thermoplastic Rubber Tread
No. 483N33

GA GRAINGER APPROVED

Antimicrobial Wheels

These wheels are impregnated with an antimicrobial compound that stops damaging, odor-causing microbes from growing on them. They have a lightweight, corrosion-resistant plastic core. **Polyurethane** treads will not mark floors and are more resistant to abrasion and chemicals than rubber treads. **Rubber** treads are suitable for most floor types. **Thermoplastic rubber** treads withstand exposure to chemicals and water and will not damage floors.

Conductive Rubber Tread on Plastic Core Wheels

These wheels have a lightweight, corrosion-resistant plastic core and a conductive rubber tread that disperses static electricity by letting it flow to the ground. They are used on carts in medical settings, laboratories, computer rooms, cleanrooms, electronics manufacturing facilities, and other areas where static electricity buildup is a concern. They dissipate static electricity buildup that can damage equipment on the carts, injure people who touch the carts, or cause sparks that can ignite flammable vapors near the carts. The wheels have precision ball bearings and will not mark floors.

V-Groove and Flanged Track Wheels

Track wheels fit into compatible steel tracks or rails and provide precise control over movement and alignment when installed on containers, racks, and other equipment that will be moving between two locations, such as from one machine to another, into and out of an oven, or between points on an assembly line. **V-groove** wheels have a V-shaped tread that mates with a compatible angle-iron track. They have flat edges and can also roll on flat surfaces. **Single-flange** wheels have one flange that guides the wheels along a flat track or rail. They create less friction between the wheel and the track or rail than dual-flange wheels. **Dual-flange** wheels have two flanges that guide the wheels along a flat track or rail. They maintain their alignment better than single-flange wheels in applications with impact loads, debris, or obstructions.

Tread Type Information

Tread Type

Tread refers to the part of a wheel that makes contact with a surface when rolling. Wheel treads may be smooth, or they may have ridges, bumps, or other features that provide maneuverability or traction.

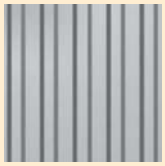
Ribbed—Provides good contact on many surfaces.

Sawtooth—Provides traction and maneuverability on turf and grass.

Diamond—Offers two-way traction on soft ground or snow.

Centipede—Keeps wheels from slipping.

Smooth—Allows wheels to roll on tacky surfaces such as tar or asphalt.



Knobby—Offers traction on soft ground or snow.

Turf—Provides traction and helps prevents damage when rolling on lawns and other soft surfaces.

Hub Type

Center-mount hubs have equal clearance on all sides of the hub.

Offset hubs provide extra clearance between the wheel and the equipment it is mounted on.

Pneumatic Wheels

Pneumatic wheels are filled with air to cushion loads against shock and vibration. They provide a quieter, more cushioned ride than semipneumatic and flat-free wheels but require maintenance to keep them filled to the correct pressure. They can be punctured and are recommended for areas without sharp debris.

Semipneumatic Wheels

Semipneumatic wheels have a thick rubber wall with a nonpressurized air pocket in the center that cushions loads against shock and vibration. They will not go flat if punctured and can be used in areas that may contain sharp debris. Semipneumatic wheels are lighter than flat-free wheels, and they require less maintenance than pneumatic wheels because they do not have to have their air pressure checked.

Flat-Free Wheels

MARASTAR. GA GRAINGER APPROVED

Flat-free polyurethane foam wheels absorb more shock and provide a more cushioned ride than semipneumatic wheels. They do not need to have their air pressure checked and will not go flat if punctured, making them suitable for rolling over rough or uneven terrain in areas with sharp debris.

General Purpose Floor Locks

GA GRAINGER APPROVED

General purpose floor locks are made from zinc-plated steel. They mount onto carts and other wheeled equipment and have a foot pedal that users step on to engage a spring-loaded brake pad that presses against the floor to create friction and stop the equipment from moving.

For Wheel Dia.	Floor Lock Retracted Height	Floor Lock Extended Height	For Caster Mounting Height	Mounting Plate Size	Mounting Plate Bolt Hole Pattern	Item No.

Heavy-Duty Adjustable-Height and Low-Profile Floor Locks

GA GRAINGER APPROVED

These heavy-duty floor locks have cast steel or stainless steel bodies and provide more strength and abrasion resistance than general purpose floor locks. **Adjustable-height** locks allow users to change the height of the locks' friction pads. This allows the locks to be used with casters in a range of heights, and it lets users compensate for wear on the pads to maintain proper locking and unlocking action. **Low-profile** locks help ensure sufficient clearance when they are used on low-profile carts.

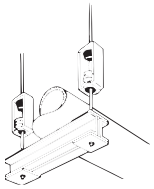
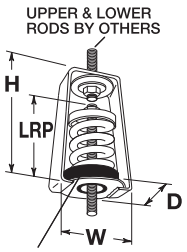
Spring Hanger Vibration Isolators



GA GRAINGER APPROVED · MASON INDUSTRIES

Steel springs reduce vibration transmission 2 to 6 times better than neoprene, as performance improves with larger deflections. LDS (Low Dynamic Stiffness) rubber cups under the springs and a projecting rubber bushing prevent sound transmission.



Cap. Range	Deflection Range	D	H	W	Lower Rod Penetration	Max. Rod Dia.	Spring Color	Brand	Item No.

AirLoc Adjustable Jack Mounts/Vibration Isolators

Neoprene provides better equipment stability. Nitrile provides greater vibration damping.

Low-Profile—Provide low-profile leveling and isolation with attachment stud and hardware.

Higher-Floor Inclination—Automatically compensate for floor unevenness up to 4°. Include 2 nuts and 2 washers.

Internally Leveled—Provide up to 1" height adjustment. Include 1 nut and 1 washer.

MASON INDUSTRIES

Neoprene Seismic Restrained Mounts

High-capacity, low-deflection (up to 0.15") floor mounts designed for earthquake zones feature all-direction, fail-safe steel housings. Provide high-frequency noise isolation of equipment. Excellent for truck and mobile applications.

Capacity Range	Color Mark	D	H	W	Item No.
0 to 525 lb.	Green	3"	2½"	4¾"	**20UZ14**
0 to 1000 lb.	White	3"	2½"	4¾"	**20UZ15**

0 to 3500 lb.	White	3¾"	2¾"	6¼"	**20UZ17**

Cylindrical Vibration Isolators

Isolators are compression-mounted to control noise, vibration, and shock. 50 durometer, natural rubber pads are chemically bonded to steel with superior abrasion resistance and high tensile strength. Grade 5 screws are clear, zinc-plated.

GA GRAINGER APPROVED

Note: Not for wall- or ceiling-suspended installations. Not suitable for excess exposure to oil, grease, and solvents, or temps. over 150°F.

Vibration Isolation Pads

MASON INDUSTRIES

Pads protect equipment from shaking and are designed for use when machines are bolted to the floor.

NEOPRENE

Pad modules are easy to cut to size. Self-gasketing waffle pattern helps contain spills and improves suction and grip.

Mini Super W Pads— Provide 1/16" max. deflection.

Super W Pads—Provide 1/8" max. deflection.

NEOPRENE AND STEEL

For concentrated loads such as heavy machines with small legs or formed sheet metal legs without a bottom surface.

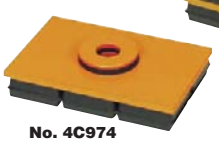
Type A—Have a cemented steel plate between a bottom super waffle pad and top 1/4" friction pad.

Type B—Have a 3/4"-dia. center hole for bolting, no top friction pad. Includes 3/4" neoprene isolation washer cemented to a steel washer.

NEOPRENE AND CORK

2 honeycombed neoprene sheets are adhered to a dense, granulated cork core.

NITRILE PADS



Oil-resistant pads are great for applications with constant exposure to oil, grease, or gasoline.

No. 5XR47 Super W

AirLoc®

Vibration Isolation Pads

Profile neoprene provides best isolation; flat neoprene provides better equipment stability. Nitrile provides greater vibration damping.

Precut Pad Packs—Provide 4 points of support. Include 4 primary pads and 4 shim pads. Use metal shim between pad surfaces to compensate different heights of equipment.

Elastomer Sheets—Reduce noise and vibration of equipment. Use whole or cut sheets to custom sizes.

Pallet Rack Information

PALLET RACK CONSTRUCTION

Bolted | Lynx® | Teardrop

PALLET RACK STYLE

Roll-Formed | Structural

Pallet racks are designed to store large and often heavy loads that are on a pallet, in a container, or loose, such as bar stock. In order to choose the correct pallet rack, first determine the measurements of the largest load that will be stored and the weight of the heaviest load. This will help determine the load capacity and number of levels required.

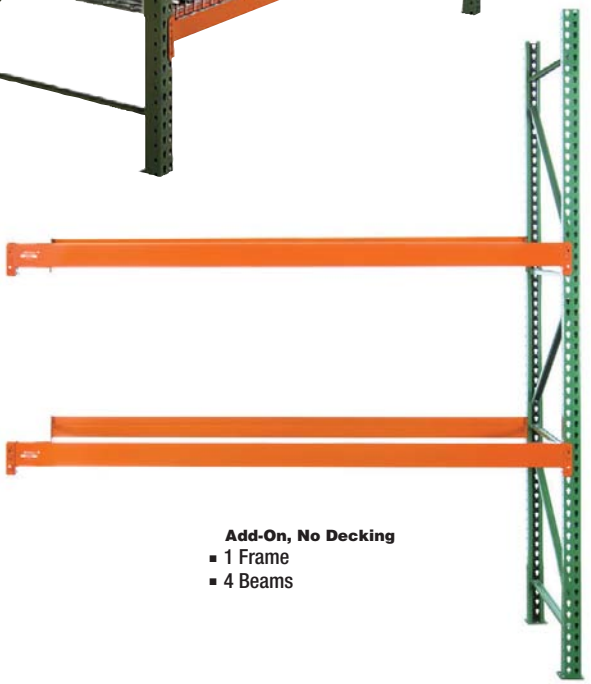
Upright frames and beams can then be ordered to complete the pallet rack. Bays can be strung together by ordering the proper number of beams and one additional upright for each bay added. After the pallet rack is assembled, pallet rack decking can be used to help secure loads. Accessories can also be added as needed.

Before selecting a pallet rack, please be sure to check local ordinances for building code and seismic requirements, which may reduce the capacities listed or require factory modifications.

ACCESSORIES

Crossbars/Beam Ties
Span the distance between beams to stabilize loads.

Wall Spacers
Connect racks to walls for added stability.



Row Spacers
Connect and evenly space two rows of rack back to back.

Rack and Frame Protectors
Reduce impact damage from vehicular traffic.

Starter with Decking
- 2 Frames
- 4 Beams
- 4 Decks

Add-On, No Decking
- 1 Frame
- 4 Beams

Teardrop Roll-Formed Pallet Rack Units

HUSKY RACK & WIRE™

- Fully-welded, steel teardrop frame design
- Rack Manufacturer's Institute (RMI) Certified
- Boltless assembly

Fully configured rack units include frames, beams, and choice of decking or no decking.

HUSKY RACK & WIRE™

Teardrop Roll-Formed Pallet Rack Components

- Fully-welded, steel teardrop frame design
- Rack Manufacturer's Institute (RMI) Certified, except No. 41D989
- Boltless assembly
- Choose frames, beams, and wire decking separately for custom configurations

Upright Frames—Feature teardrop punch pattern every 2". Horizontally and diagonally braced frames create a strong, stable system. Standard prepunched footplates make anchoring easy. Corrosion-resistant, green polyurethane finish.

	6"	8300 lb.	**1KBE4**

Beams—Beams feature a safety clip which cannot be sprung or removed without first removing the beam; no special tools required. An audible click or simple glance confirms the lock is engaged. Corrosion-resistant, orange polyurethane finish.

Wire Decking—Made from 6-ga., galvanized steel wire. Wire decking offers strength and allows airflow around materials. Drop-in design makes setup fast and easy; no tools required.

Many county fire marshals require the use of wire decks instead of plywood supports.

Teardrop Roll-Formed Pallet Rack Components

STEEL KING BUILT TO DELIVER

- Boltless assembly
- Seismic components are available online, see Grainger.com®

Closed tubular columns and braces generate 250% greater durability against fork truck damage.

Upright Frames—Multiple offset anchor holes provide flexibility in anchor placement. Footpad with nesting ridge provides easy shim nesting, and flush footpad to column base evenly disperses load weight. Vista green powder-coat finish.

Beams—Teardrop and rivet design with heavy-duty connection plates allows easy installation and greater connection integrity. Auto-engaging safety clip resists beam disengagement and provides an audible click when secured. Poppy orange powder-coat finish.

STEEL KING
BUILT TO DELIVER

Bolted Structural Channel Pallet Rack Components

- Fully welded steel construction
- Powder-coat finish resists chips and chemicals

Upright Frames—Hot-rolled structural channel columns are specially punched for 2" beam adjustability. Full horizontal and diagonal bracing increases frame strength. 7-ga. baseplate welded to column disperses floor load and increases stability. Multiple anchor holes allow easy floor mounting. Precaution Blue color.

Beams—Made with high-strength structural steel (50,000 psi min.) for superior rigidity and durability. Feature 2-bolt beam connections and 7-ga. wraparound connector plate to help square rack into position and create a tighter connection. Yellow color.

Cross bars are sold separately.

Wire Mesh Decking for Pallet Racks and Bulk Storage

worldwide materialhandling

- 14-ga. support channel design
- Gray powder-coat finish

Heavy-gauge, all-welded construction is stronger and more cost effective than wood. Provide maximum waterflow for fire code compliance, and maximum airflow and light for enhanced visibility and improved housekeeping. Drop-in design allows for easy, tool-free installation.

Hinged Door

HUSKY

Velox® Machine Guard System

- Includes installation hardware

Easy-to-assemble barriers protect workers from dangerous machinery, equipment, and robotic cells. 8-ga. panels are welded to a 2" x 2" wire grid pattern. Order panels separately. Use hook fasteners and drive pins (included) to fasten into a 16-ga. 2½" square steel post. Components come with welded footplates and anchor bolts. System installs 50% faster than most other wire guarding products and are easily modified to accommodate field obstructions.

Collision Sentry® Warning Device

Infrared motion detectors alert forklift drivers and pedestrians to movement in dangerous blind corner intersections. Highly visible LEDs flash and an audible alarm is issued when a collision is imminent. Volume is adjustable. Portable and compact device snaps onto racking for immediate deployment. Runs on D batteries (included) and features a low-battery indicator.

Rack Sentry® Pallet Rack Protectors

Attach protectors to rack uprights to create a highly visible protective layer that withstands abuse from forklift collisions. Flexible EVA construction absorbs impact and then quickly returns to shape. Install directly onto uprights eliminating the need for drilling into and putting additional stress on the floor.

Storage Rack Decking Options

NO DECKING
Allows for customization of decking based on need.

PARTICLEBOARD DECKING
Economical choice for heavy load storage. Durable, smooth solid surface. Meets or exceeds ANSI-M2 standards.

LAMINATE DECKING
Laminate surface bonded to particle-board core provides a smooth finished surface that is easy to clean and moisture-resistant.

WIRE DECKING
Wire-mesh design allows a clear view of inventory and prevents accumulation of dirt, oil, and debris. It also maximizes the efficiency of sprinkler systems and allows better air circulation and light penetration.

RIBBED-STEEL DECKING
Provides extra strength and rigidity for heavy load storage. Ribs create a space to grab packages easily without pinching fingers.

ADDITIONAL DECKING
Bulk Storage and Boltless Storage Racks are available with or without decking. Additional decking can be ordered separately on page 1234.

ADDITIONAL SHELF LEVELS
Additional shelves increase the available volume of storage while reducing the customer cost per square foot of storage.

tennsco® Storage Made Easy

14-Ga. Bulk Storage Racks

- 3 shelf levels
- Gray electro-coated finish
- Adjustable in 2" increments

Allow clear and convenient access from the front or rear. Include welded footplates for floor mounting. Upright assemblies are prewelded for strength and will support up to 17,000 lb. based on 24" shelf centers. Racks include front-to-back supports: 2 per shelf level on 48" and 60"W beams, 3 per level on 72"W beams, and 4 per level on 96"W beams. Available with or without decking. Easy to assemble. No tools required.

Note: Not for use with pallets or as scaffolding.

14-Ga. Boltless Storage Racks

edsal

- 3 shelf levels
- Gray baked enamel finish
- Shelf levels adjust in 1½" increments

Racks have a double rivet beam design, which provides unobstructed access for 4 sides and allows faster assembly. Designed for storage of medium to large bulky items. Start a shelving system with starter units; complete the system with add-on units as required. Add additional shelf levels as needed. Racks include center supports: 1 per shelf level on 48"W beams, 2 per shelf level on 72"W beams, and 3 per shelf level on 96"W beams.

Ribbed Steel

Decking for Bulk and Boltless Storage Racks

edsal NashvilleWire PRODUCTS

Easy to install; decking simply drops into place on rack. Bulk storage racks, boltless racks, and add-ons are sold separately on pages 1231 and 1233.

Edsal® Particleboard—⅝", medium-density, industrial-grade particleboard provides a solid, sturdy shelf for general storage. 96"W ships in two 48"W pieces.

Nashville Wire® Galvanized Wire—Open 2" x 4" wire-mesh design allows a clear view of inventory, prevents accumulation of dirt, oil, and debris, and maximizes the efficiency of sprinkler systems. Galvanized steel construction resists rust and corrosion.

Edsal® 20-Ga. Ribbed Steel—Provides the strength and rigidity needed for heavy load storage. Items slide on and off the shelf easily. Gray powder-coat finish. Ships in 12"W pieces.

16-Gauge Boltless Shelving

edsal

- 5 shelf levels adjust in 1½" increments
- Height: 84"
- Gray enamel finish
- Shipped unassembled

Double rivet connection on all shelf supports provides strength and unit rigidity. Easy to assemble and reconfigure; no hardware needed.

Low Profile—1" tall supports are located on all four sides of the top, middle, and bottom shelves.

Medium Profile—Feature 2¾" tall supports on all four sides for superior load capacities.

Extra Shelf Level—Shelving without decking offers flexibility of installing alternative decking types.

Particleboard Decking—Offers a smooth and durable surface in a complete, ready-to-use unit.

tennsco Storage Made Easy

High-Capacity Boltless Shelving

- Shelves adjust in 1½" increments
- Gray baked enamel finish
- 5 shelf levels

Easy to assemble with tapered keyhole slots and snap-in rivet design; no additional hardware needed. 16-ga. steel shelves and 14-ga. support framework ideal for heavy materials. Braceless construction allows easy access from all sides; smooth steel surface makes placing and moving items easy.

Cantilever Racks

- Arms are adjustable on 4" centers
- All units include a brace set
- Hardware included
- Shipped unassembled
- Gray powder-coated finish

Load up to 2000 lb. at 1 time with a lift truck, or deposit materials manually for quick, organized storage and retrieval. All-welded 3/16" 12-ga. steel arms with 18° slope; simply "button" into place for storage versatility. Columns are made with two 3" x 5" channels welded to 3/16" steel base. Brace sets are made from 1½" x 2½" tubing and heavy steel diagonals. Starter and Add-On Units offer the flexibility of having a two upright unit or a continuous row of shelving that can accommodate longer materials.

Quiktree® Series—Light-duty racks have a column capacity of 3500 lb. per column per side (not including base).

Steeltree® 08 Series—Medium-duty racks are ideal for storing light bar stock, tubing, lumber, or other lightweight materials.

Steeltree® 25 Series—Heavy-duty racks are great for storing large amounts of awkward or heavy stock in a compact area. Quick and easy assembly requires no special tools.

Button-On™—Feature a column capacity of 12000 lb. per column per side. Unique inclined arm with 18" slope is ideal for storing pipe, tubing, lumber, and bar stock. Buttons into position and adjusts on 4" centers.

High-Capacity H-Post Industrial Shelving

- Shelves adjust in 1½" increments
- Powder-coated finish

High-capacity H-posts allow use of full shelf width and are common between adjoining units to reduce cost, and assembly and installation time. Shelves are box-formed at front and back with triple-flanged sides for added strength. Included compression shelf clips add to overall unit capacity.

Open shelving includes sway braces and closed shelving includes 18-ga. side, and 24-ga. back panels for enhanced stability.

Hallowell

Industrial Shelving

- Shelves adjust in 1½" increments
- Gray powder-coated finish
- Shipped unassembled

Shelves are box-formed at front and rear, with triple-flanged sides and welded corners for maximum strength. Beaded front post allows use of full shelf width. Angle back posts bolt together when adding units; quick, easy assembly.

Freestanding Shelving Units—Ideal where a single unit is required, or where it may be necessary to change shelving configuration.

ACCESSORIES FOR CLOSED SHELVING

Vertical Shelf Dividers—Clip into shelves using nylon fasteners to provide additional organization.

Double Swinging Doors—Create cabinet-like storage. Include chrome-finish handle with built-in cylinder key lock for 3-pt. positive locking.

Closed Base Strips—Close the gap between floor and bottom shelf to prevent dirt and debris from accumulating under shelving.

GA GRAINGER APPROVED

Industrial Shelving

- Shelves adjust in 1" increments
- Gray powder-coated finish
- Shipped unassembled, hardware included
- Height: 85"

Tubular-welded, box-beam shelf construction is welded to shelves at front and rear on 3" centers, with lapped and welded corners. Each shelf clip provides a wedge-type compression grip on all corners.

Starter/Add-On—Select starter unit and add-on units as needed. 14-ga., common box-formed front posts on starter/add-on units provide full shelf width access and reduced assembly time.

Freestanding—Select a freestanding unit if add-on units are not needed in the future, or full shelf width access is not required.

Particleboard Shelves No. 1VG39

Compact "Z" shaped beam design with recessed step protects particleboard deck from chipping, prevents splinters, and increases usable storage height and load capacity.

GA GRAINGER APPROVED

Industrial Boltless Shelving

- 16-ga. "Z"-shaped beams for added strength
- 5 shelf levels adjust in 1½" increments
- 2-piece post units may be assembled vertically or horizontally
- Shipped unassembled

Particleboard Shelves—Durable particleboard shelves provide a smooth, solid surface. Double-riveted beams lock into heavy-duty corner posts to form structurally secure joint. Gray powder-coated finish.

Perforated Shelves—Waterproof perforated shelves can be used indoor or outdoors, including lawn and garden applications. Perforated surface allows drainage and ventilation. Shelves can be used flat or inclined for improved visibility and gravity flow. Smooth hidden post design hides rivets. Silver powder-coated finish.

Flow Cell Gravity Flow Racks

Modular racks provide a dynamic storage unit to keep inventory organized and facilitate maximum picking efficiency. Ergonomically designed to minimize reaching and help reduce worker injury and fatigue. Versatile racks are also reconfigurable to accommodate possible line or process changes. Feature heavy-duty steel construction, clean sightlines, easy-to-adjust levels on 1" centers, and a powder-coat finish. Units are easy to assemble in under an hour. Mobile units feature 4"-dia. casters. Ideal for use as lineside storage, subassembly stations, supermarket racks, and modular mobile carts.

Roller Rack Gravity Flow Racks

Roller Rack structures are preconfigured, easy to assemble, and provide carton flow for order picking operations. Ideal applications include distribution, manufacturing, and retail operations where carton flow is important and there is no need to store pallets above the rack. These convenient racks use less steel than pallet racks, and feature a quick-to-build design to reduce freight costs and possible damage. Allow workers to replenish from the back without interrupting the pick line in front. Feature tilt-in beam clips for fast installation and adjustability, knockdown design for compact storage and transport, and a flexible modular design allowing for standalone units or add units for a bay of carton flow. Included posts are 2" on center punching.

GRAINGER APPROVED

Commercial Wire Shelving Units

- Shelves adjust in 1" increments
- 300-lb. shelf capacity (based on evenly distributed loads)

Quickly assembles and adjusts, without tools. Include 4 posts with leveling feet and S hooks. NSF Certified.

Zinc—Economical choice for general storage applications where a bright finish is not required.

Chrome—Bright finish resists rust and corrosion and is ideal for high-visibility areas.

Powder-Coated—Black, powder-coated steel combines structural strength with a more-attractive appearance for high-traffic, nonindustrial areas.

METRO
We put space to work.

MetroMax Q® Polymer Mat Shelving and Components

- Shelves and posts are sold separately to allow reconfiguration as storage needs change
- For Starter Units, order 1 pack of 4 shelves and 1 pack of 4 posts
- For Add-On Units, order 1 pack of 4 shelves and 1 pack of 2 posts; each add-on unit begins assembly at the posts of previous unit
- Steel posts and shelf frames have epoxy-coated finish for corrosion resistance
- 4 shelves adjust quickly and easily in 1" increments

Removable, polypropylene open grid-style shelf mats for easy cleaning. NSF Listed.

Shelves—Designed for cooler/freezer environments and dry storage. Built-in Microban® antimicrobial protection keeps surfaces cleaner between routine cleanings.

Casters—5" polyurethane casters are available with or without brake. Sold separately below.

Posts—Starter and add-on posts are fitted with adjustable leveling bolts to compensate for uneven surfaces. Stem caster posts come without leveling bolts to accommodate easier stem caster installations.

Swivel Caster w/Brake No. 2ENL4

Wall-Mount Wire Shelving Kits

GRAINGER APPROVED

- Shelves adjust in 1" increments
- Shelf capacity: 250 lb., evenly distributed

Add extra storage space to work area, up and out of the way. Open wire design minimizes dust accumulation and allows good air circulation and light penetration. Kits include shelving and 2 post mounts. Chrome Wire is NSF Certified.

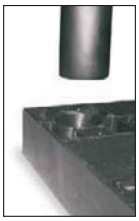
SPC INDUSTRIAL

Plastic Bulk Shelving and Containment Trays

Grid and Solid Top Shelving— Rugged high-density polyethylene construction provides extra-high load capacities, while the modular design enables a variety of configurations. Resistant to oils, gas, acids, solvents, and most industrial chemicals. UV protected.



Containment Trays—Keep materials separated and confine spills to prevent damage to stored items. Use 1 tray between each section of leg posts. Come in chemical storage color coding. Can only be used with 24" deep and 36", 66", or 96" wide shelving units.

tennsco Storage Made Easy

Industrial Shelving

- Shelves adjust on 1" centers
- Medium gray powder-coated finish
- Shipped unassembled

Affordable and versatile system of open and closed units can be easily incorporated into your office, warehouse, or factory. Shelves have a welded box formed construction at front and rear, lapped and welded corners, and sides with triple bend construction. Perforated shelves help meet fire codes when storing flammables by allowing water from overhead sprinklers to reach all levels of the unit.

Grid Top

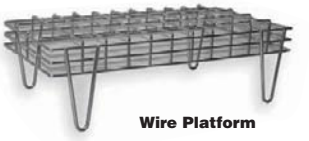
Solid Top

SPC INDUSTRIAL

Plastic Dunnage Racks

- Constructed of high-density polyethylene
- 12" leg posts
- Snap together for easy assembly

Heavy-duty construction provides extra-high load capacities and can withstand extreme temperatures. Long-lasting, noncorrosive material is impervious to oils, salts, acids, and most industrial chemicals. Easy to steam-clean or disinfect. Lightweight and portable.



Grid Top—Flow-through design permits scrap and liquids to fall or drain below.

Solid Top—Boxes can slide on and off without catching corners or damaging containers.

Box Locker Unit with Coat Rod

Quick-Assembly Steel Wardrobe and Box Lockers and Accessories

GRAINGER APPROVED

- 22-ga. solid body
- 16-ga. louvered doors and frames; 16-ga. doors on box lockers
- 6"H legs
- Powder-coated finish
- Not all colors are available in all configurations; see Grainger.com® for current selection

Quick-Assembly Steel Wardrobe and Box Lockers—Box lockers are equipped with a padlock-hasp pull-handle. Wardrobe lockers include a steel-recessed, kickproof, vandal-resistant handle. Snap-together design assembles in minutes. Frame assembly requires no nuts or bolts.

Assembled Steel Wardrobe and Box Lockers—Steel construction with welded door frame provides a strong, rigid locker unit. 6-knuckle door hinges provide strong, trouble-free operation. Optional accessories sold separately, this page.

28¼"W Modular Drawer Cabinet, Bright Blue No. G8230

28¼"W Modular Drawer Cabinet, Classic Blue No. G8232

Modular Storage Cabinets

LISTA

- 440-lb. capacity per drawer, based on evenly distributed loads
- All-welded steel, powder-coated finish
- Built-in drawer locking system includes 2 keys
- 28¼"W cabinets are 28½"D; 40¼"W cabinets are 22½"D

Full-extension drawers provide full access, while included drawer dividers allow creating custom compartments. Unique PrevenTip® locking system allows only 1 open drawer at a time. Flush full-width recessed handles. Hinged handle label holder and printable labels included.

Additional dividers available; call 1-800-GRAINGER (472-4643).

OPEN-FRONT

Stack on top of cabinets. No. G8246 fits on single extra-wide cabinets; No. G8240 fits on 2 side-by-side standard-width cabinets. Stationary bottom shelf has 1½" lips on both sides. Center shelf adjusts in 1" increments.

Additional dividers available; call 1-800-GRAINGER (472-4643).

SLIDING-DOOR

Allow easy access to items on shelves, while providing secure storage with lockable door. No. G8248 fits on single extra-wide cabinets to save floor space, or use as a counter unit and No. G8239 fits top of 2 side-by-side standard-width cabinets.

Additional dividers available; call 1-800-GRAINGER (472-4643).

GA GRAINGER APPROVED

Modular Storage Cabinets

- 320-lb. capacity per drawer, based on evenly distributed loads
- All-welded steel; powder-coated finish: black with red drawers
- Right-side locking system secures all drawers with 2 keys (included)
- All cabinets measure 28"W x 28¼"D

Full drawer extension allows complete access to contents. Adjustable drawer dividers are included to create smaller compartments as needed. Ball-bearing telescoping slide suspension enables smooth drawer opening and closing. Large, full-width handles provide space for included labels.

Choosing the Right Strength Storage Cabinet

Heavy-Duty Cabinets
Constructed of 12- or 14-gauge steel, designed for use in the most demanding environments.

Industrial Cabinets
Constructed of 16- or 18-gauge steel, great for use in manufacturing facilities and other industrial environments.

Commercial Cabinets
Constructed of 20-, 22-, or 24-gauge steel, ideal for general purpose, light-duty storage applications.

Full Height with Bi-Fold Doors

Industrial Combination Storage Cabinets

- Shelves adjust in 3" increments
- 3-pt. locking mechanism with ⅜" locking rod and padlock hasp
- Powder-coated finish
- Standard doors

Feature full-width top shelf, 3 adjustable partial-width shelves, and a hanger rod. Standard steel cabinets feature DuraTough™ prime cold-rolled sheet steel construction and are ideal for general purpose storage. Galvanneal steel models feature prime galvanneal sheet construction that provides excellent corrosion resistance for outdoor applications and general high-humidity conditions.

tennsco Storage Made Easy | Hallowell | GA GRAINGER APPROVED | Sandusky

Commercial Steel Shelving Storage Cabinets

- Shelves adjust in 2" increments
- Powder-coated finish

Shelves adjust on integrated support tabs and fit tightly to sides and back with no clips needed. Raised bases protect doors from damage by mops. Reinforced doors with nylon lock bar guides open 180° for full access to contents. Cabinets feature a 3-pt. locking mechanism with keyed chrome handle (key included), except Nos. E1446, E1448, G6554, E1445, E1447, E1449, G6552, and G6553, which have a 2-pt. locking mechanism. Clearview cabinets have see-through acrylic doors to provide visibility to contents and 2 swing handles, 1 with key lock.

Radius Edge Corner

No. F8653

GA GRAINGER APPROVED

Commercial Radius Edge Corner Steel Storage Cabinets

- 20-ga. doors
- 22-ga. shelves
- Shelves adjust in 2" increments
- Recessed locking handle with nylon guides
- Powder-coated finish

Radius edge corner running the full height of the cabinet's front edge gives a soft, modern appearance. Raised base protects doors against damage from mops or brooms. Strong, reinforced doors open 180° for full access to contents. Premium flush recessed handle provides a smooth door front for added safety and protection.

tennsco Storage Made Easy

Commercial Jumbo Cabinets

- 20-ga. doors and sides
- 22-ga. backs
- Shelves adjust in 2" increments

Extra-wide 48" cabinets provide 33% more storage space than a standard 36"W cabinet. Each door rides on 4 heavy-duty leaf hinges to accommodate heavy loads and a 3-pt. locking system ensures security. Models with sliding doors provide an ideal solution for areas where space is restricted, such as hallways, and only add 3½"D to the cabinet.

Fort Knox Series Modular Storage System

Durable and aesthetically appealing, this tough utility/garage storage system features numerous components and a modular design for customization of individual workspaces. Feature heavy-duty welded storage components. Textured 2-tone colors black and red with powder-coated finish. Cabinets, pedestals, and lockers ship assembled. Individual components available, see Grainger.com®.

Plastic Utility Storage System

Durable resin construction resists dents and will not rust. Multi-wall panels are engineered for strength and stability. Easy to assemble with minimal tools and is virtually maintenance-free.

Note: Not intended for flammable, caustic, or hot items.

Cabinets—Feature metal reinforced adjustable shelves and padlockable doors (lock not included). All cabinets are wall-mountable.

All-Welded Bin Cabinets

Series A
- 14-ga. steel, gray powder-coated finish
- 3-pt. locking mechanism; most have 5/16" locking rod and keyed handle, No. 3NYP3 has a padlock hasp (padlock not included)

Series B—Yellow polypropylene bins are removable and have a hopper front with label holder.
- 12-ga. construction
- 6"H, 7-ga. legs for forklifting or to secure cabinet to floor
- 3-pt. locking system with padlock hasp (padlock not included)

Series C—Deep box cabinets include 7" deep forward-swing doors. Hard swivel casters help provide smooth operation during heavy loads. Include large, fixed in-place parts bins inside cabinet.
- 14-ga. steel; powder-coated finish
- 3-point locking mechanism has 3/8" lock rods
- 4" legs
- Shipped fully assembled

All-Welded Cabinets with Shelves

- Standard Doors are flush in order to mount cabinets next to each other and the smaller depth allows doors to fully open
- Box Doors allow full-size bins to store on its doors for additional storage, plus the greater door depth provides extra strength and rigidity

Series A
- 14-ga. steel, gray powder-coated finish
- Shelves adjust in 4" increments
- 3-pt. locking mechanism; most have 5/16" locking rod and keyed handle
- No. 3NYP4 has a padlock hasp (padlock not included)

Series B—Shelves and bins hook into place; no tools required.
- 14-ga. steel; textured powder-coated finish
- 1450-lb. shelf capacity, based on evenly distributed loads
- 3-point locking mechanism with 5/16" lock rods
- Shipped fully assembled

Series C—Shelves bolt into place using included fasteners. Bins hook into place; no tools required.
- 12-ga. steel; powder-coated finish
- 3-pt. locking system with 3/8" rods and padlock hasp (padlock not included)

Series D—Include 4" deep "pocket doors" with hinges and leveling feet.
- 14-ga. steel; gray powder-coated finish
- 30-lb. capacity door shelves adjust in 2" increments
- 700/800-lb. capacity interior shelves adjust in 4½" increments
- Cabinets lock with padlock (not included)
- Cabinets shipped fully assembled; bins, louvered panels, and shelves shipped separately

Bin Cabinet Without Bins—Adjustable shelves on louver uprights adjust on 4" centers; no tools required. Doors open at 180° for full and easy access.
- 14-ga. steel; textured powder-coated finish
- 3-pt. locking system with 5/16" rods

Selecting Storage Bins

BIN TYPES

Hanging—A lip on the back of the bin allows it to be hung from a rack or panel.

Hopper-Front—The most-common type of bin has a partially-open front that provides easy access to contents.

Nesting—When empty, bins slide inside each other to save space.

Stacking—Bins may be placed on top of one another to save space.

Tote—All 4 walls are of equal height; there is no hopper. Can be filled to near the top rim.

BIN MATERIAL

Corrugated—Lightweight, inexpensive bins usually ship unassembled.

Conductive/ESD—Designed to protect sensitive parts from static discharge. Conductive materials have a surface resistance of less than 1 x 10^5 ohms/sq. Dissipative items have a surface resistance of more than 1 x 10^5 ohms/sq., but less than 1 x 10^{11} ohms/sq.

Polypropylene—High-impact plastic resin is known for its stiffness and durability.

Fiberglass-Reinforced Plastic—Has higher impact resistance, higher weight capacity, and better resistance to heat than plastics not impregnated with fiberglass.

Polyethylene—High-flexibility plastic resin provides better crack resistance.

Steel—Galvanized metal sheet can be exposed to aggressive chemicals and extreme temperature variations up to 375ºF.

Wire Mesh—Dust- and dirt-free storage offers instant visibility of stored product. Bins can stack or hang.

BIN SYSTEMS

Rail Systems—Economical systems are constructed of individual flat steel rails that span between uprights. Used to hold hanging bins that are all the same size. User must know at the time of assembly what size bin will be used so that rails can be spaced accordingly.

Panel Systems—Constructed of flat steel panels that span between uprights. Most-commonly used to hold a combination of multiple-size hanging bins, which can be easily placed exactly where needed on the rack.

Pick Rack Systems—Sloped shelves keep shelf bins or system bins at an angle so that parts stay at the front of the bin for easy picking.

Shelving Systems—These units typically have higher weight capacities than other rack systems and can be used with any size or type of bin. Traditional steel shelving is least expensive; chrome-plated wire shelving tends to collect less dust.

Bin Carts—Mobile units provide easy organization and a convenient work surface.

Hang and Stack Bins

GA GRAINGER APPROVED

Industrial grade polymer construction. Same-size bins are stackable to make best use of space on shelves and benches. Bins hang from rail and panel systems to create efficient storage. Each bin has one slot for a length divider and one for a width-wise divider. Ideal for inventory control and Kanban systems.

AKRO-MILS® QUANTUM™ STORAGE SYSTEMS

Floor and Wall Hanging Systems

AKRO-MILS® FLOOR AND WALL HANGING SYSTEM

- 16-ga. steel construction
- Powder-coated finish
- Used to hang AkroBins® (not included)

Louvered Panels—Versatile panels can be installed on shelving, workbenches, walls, or even inside service vans. Mounting hardware not included. Louvered panel hooks are available, see Grainger.com®.

Louvered Bench Racks—Ideal for use on workstations. Side supports bolt onto unit.

Louvered Floor Racks—Racks provide high-density storage. Assembly required.

Rail Floor Racks—Ideal for creating stationary storage islands.

Rail Mobile Kit—Converts 2-sided floor rack No. 5YM90 into mobile storage center. Includes reinforcing braces, handle, and 4" polyolefin wheel casters. Rear caster locks to prevent rolling.

Structural Foam Bin Utility Cart—Mobile workstation has a sturdy top that converts from box top to flat top and provides a convenient work surface. Bin Rail Accessory Kit No. 4YT93 must be used to hang bins on cart.

Bin Cart—Cart provides mobile, easy organization and parts retrieval. Double-sided rails can be picked from both sides. 14-ga. steel worktop.

QUANTUM™ FLOOR AND WALL HANGING SYSTEM

- 16-ga. steel construction
- Bins sold separately

Louvered Panels and Racks—Modular and economical wall-mount system hangs bins to add valuable storage space. High load capacities. Baked enamel finish resists rust and corrosion.

Rail Systems—Economical way to store several bins of different sizes in a small area. Can be single- or double-sided; configure to fit any application.

AKRO-MILS®

AkroBins® Hanging Plastic Bins and Wire Shelving Units

- For additional Bin Shelving Units, see Grainger.com®

Hang bins from racks and panels; reinforced rib design prevents sides from spreading when loaded or stacked. All bins (except 18"D models) have slot on front panel for inventory cards or large labels. Full-width hanger lip supports heavy loads. Black plastic dividers and clear lids sold separately.

Wire Shelving Units with Bins—Chrome-plated shelving comes complete with colored bins. Assembles easily. All units are 14"D x 36"W x 74"H and include 4 posts. 800-lb. shelf capacity; 2000-lb. total load capacity per unit. Meet NSF standards.

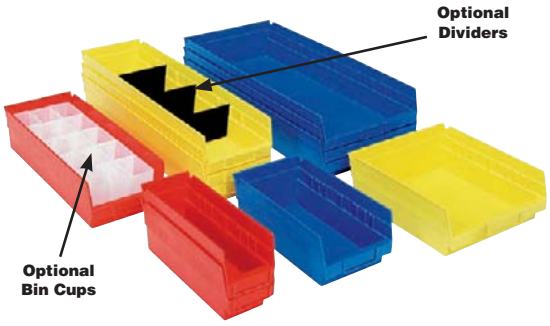
Ultra Stack and Hang Plastic and Wire Shelving Units

QUANTUM™ STORAGE SYSTEMS

- For additional Bin Shelving Units, see Grainger.com®
- For clear bins, see page 1280



Stackable and hanging bins provide an ideal, customized storage space solution. Durable injection molded bins are impervious to most chemicals. Industrial strength wire shelving allows shelves to be adjusted; smaller or larger depending upon requirements, creating a useful, workable storage system. Easy assembly, no tools required.

AKRO-MILS®

Plastic Shelf Bins and Shelving Units

- More dividers are available, see Grainger.com®
- Clear bins are available, see page 1280

Sturdy industrial grade polymer shelf bins are ideal for use with 12", 18", and 24" deep shelving or vertical storage and retrieval units. 1-pc. construction is waterproof and unaffected by grease or oil.

Optional black industrial grade polymer dividers and removable bin cups are sold separately.

Wire and Steel Shelving Units—Chrome-plated wire and 22-ga. steel shelving units come complete with colored bins. Easy to assemble with quick-adjust clips. Both measure 36"W x 74"H and include 4 posts. Wire units have 800-lb. shelf capacity, based on evenly distributed loads; 2000-lb. total load capacity per unit. Steel units have 500 lb. per shelf capacity; 3000-lb. total load capacity per unit. Wire units meet NSF standard.

GA GRAINGER APPROVED

Plastic Shelf Bins

Bins are sized to fit shelving with depths of 12", 18", or 24" and help you organize inventory and improve productivity. Ideal for all environments including industrial, commercial, healthcare, and foodservice. Plastic construction allow these bins to outlast corrugated bins. Dividers are available separately to help create multiple compartments, see Grainger.com®. Use multiple colors to code inventory and facilitate order picking.

QUANTUM™ STORAGE SYSTEMS

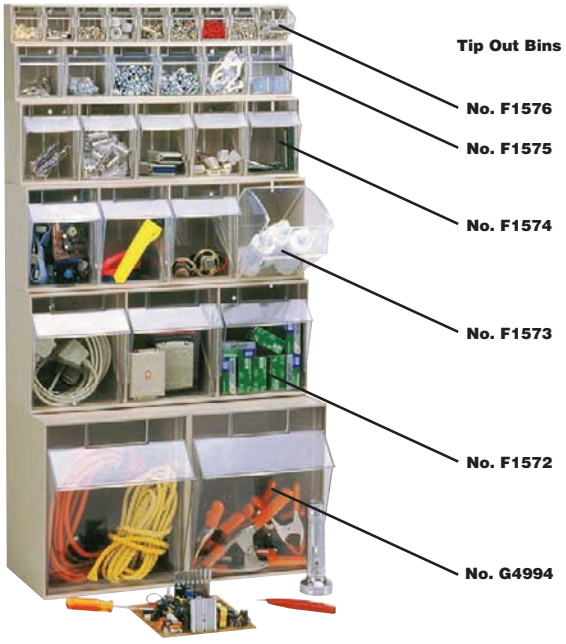
Tip-Out Bin Systems

Flexible modular systems feature bins that tip open to 45° for easy access. Stack, wall mount, attach to other fixtures, or use individually.



Wall-Mount Tip-Out Bin Frames—Preset parallel distance allows tip-out bins to be stacked and removed easily. Bottom ledge helps secure bins for placement above ground level. 14-ga. steel construction with baked enamel finish. Accept several sizes of Quantum™ clear tip-out bins (not included). Mounting hardware included.

Clear Tip-Out Bins—Injection-molded tip-out compartment is made from a custom blend of Phillips K Resin® and crystal styrene. Exterior housing is made from high-impact polystyrene.

Dividable Clear Tip-Out Bins—Removable and adjustable dividers allow partitioning into smaller compartments. Ideal for longer or larger items. Made from high-impact polystyrene.

Floor Standing Systems—14-ga. steel frames have a smooth, durable powder-coated finish. Bins included. Choose from single-sided, double-sided, and mobile double-sided.

Freestanding Slider Systems—Front and middle panels slide from side to side to provide an ample supply of storage compartments in a space-saving footprint. Easily customizable. Can be forklifted for safe transport. Stands are 14-ga. steel with baked enamel finish. Bins included.

AKRODRAWER™ DRAWER BINS

Pull handle on front of bins provides easy access to contents, while large label area allows easy identification. Solid front walls help prevent dust accumulation in bins when stored on a shelving system. Optional black dividers sold separately. Colored bins are made of high-impact polystyrene. Clear bins are copolymer plastic.

ENCLOSED SHELVING

Help protect contents from dust and have a max. capacity of 8500 lb., based on evenly distributed loads.

Toteline™ Fiberglass Stacking Containers

- Fiberglass-reinforced thermoset composite construction
- Temp. range: -60° to 250°F constant

Durable containers resist cutting oils, grease and solvents. Feature radius corners and integral molded-in handles for safe and easy handling. Easy to clean with hot water or steam using standard detergents. Ideal for forgings, machined parts, stampings, ceramics, rubber, and other hot parts emerging from molds or processing machines.

ESD Trays

- Black fiberglass-reinforced thermoset composite material
- Load capacity: 100 to 200 lb.
- Temp. range: -60° to 250°F constant

Minimize handling of PC boards and other electronic components. Surface resistivity ESD trays is 10^5 to 10^{11}.

QUANTUM™ STORAGE SYSTEMS

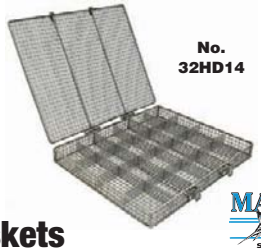
Cross-Stacking Tubs and Racks

Nesting totes are constructed from easy-to-clean, injection-molded high-density polypropylene. Each tote can hold up to 100 lb. Rolled top rim provides comfortable grip, and rounded corners add strength to stress points. Six ¼" drill hole pattern on bottom of bins for easy hole insertion for optional air flow and drainage.



All-welded aluminum tub racks transport and store a variety of products. Runners allow bins to slide in and out from both sides.

NashvilleWire PRODUCTS

Collapsible Wire Storage Containers

- Drop gate design allows easy access
- 3⅞" underclearance allows easy movement by fork trucks with 4-way entry access
- Zinc-electroplated finish

Open-wire design allows full visibility for easy inventory checks, excellent ventilation, and improved cleanliness. Units fold down flat to stack for storage and reduce return shipment costs.

Nashville Wire Jr.—Load-bearing surfaces along top edges of each wall feature double-wire reinforcements. Stackable up to 3 units high. All-welded base reinforces and protects legs and deck edges. No. 3W547 has 1" x 1" mesh. No. 3W548 has ½" x ½" mesh.

Nashville Wire—Welded channel base safely stacks up to 4 high. Flow-through base mat design.

BUCKHORN ORBIS Powered by Menasha Corporation

Bulk Collapsible Containers

- 4-way fork entry

Buckhorn—Lightweight, impact-resistant, HDPE structural-foam construction is maintenance-free and recyclable. Sanitary use from factory to field, industrial to grocery. Fold down to save space. Feature 2 access doors on opposite sides. Nos. 1XGG6 and 1XGG7 feature steel runners that add extra strength, and an interlocking post-and-pocket panel design that keeps walls upright, even under heavy loads. No. 2ZRR8 welded-steel dolly has up to 2000-lb. capacity. 5" casters, 2 fixed, 2 swivel.

ORBIS—Stackable to optimize warehouse space. Reusable containers are an economic and environmentally-preferred alternative to single-use gaylords. Containers are structural foam molded polyethylene and are moisture resistant and easily cleaned. Nos. 3HFJ6 and 3HFJ7 have solid side walls and a ventilated base.

DECADE PRODUCTS®

MACX®, MACX48® and KitBin® Bulk Bins

- 4-way fork entry

MACX® and MACX48® Bins—High-impact-resistant HDPE structural foam, fixed wall bins are durable and recyclable. Can be stacked up to 10-ft. high on a firm level surface with evenly distributed weight. Compact containers are also temperature-resistant and UV-resistant.

KitBin®—Designed so that all walls can be completely detached from the pallet for easy storage. Include a pallet base and 4 independent sides that fit together to create a strong and durable container. Removable walls also provide easy access for loading and unloading.

MODRoto Noncollapsible Bulk Containers

- 2-way fork entry, except No. H6444 is 4-way fork entry

Bulk containers cube out tractor trailers to maximize cost and logistical efficiencies. Stack when full and nest when empty, with molded nesting lugs to prevent units from jamming together.

Ship Shape—Nos. H6442 and H6443 have 2-way forklift access. No. H6444 has 4-way forklift access. HDPE plastic construction

Flat Bottom USDA/FDA—No-metal design is impervious to corrosion and rust and eliminates the potential to contaminate poultry and other food products. Rugged USDA/FDA approved construction of high density polyethylene (HDPE) is immune to cleaners, salts, water, and other chemicals. Has no internal pockets, dimples, or other bacteria-harboring reservoirs. 4-way forklift access.

Sliding Drawer Parts Cabinets

DURHAM MFG® Est. 1922

- Gray powder-coated finish
- Prime cold rolled steel
- Small and large cabinets hold 40 lb. per drawer
- Large heavy-duty bearing slide models hold 75 lb. per drawer

4-Drawer Cabinets—4 steel drawers, each with a hinged steel top, steel pull handle, closure latch, and molded polypropylene tray. Each compartment has a scooped bottom for easy access. Drawers ride on sliding full-suspension slides fixed within the cabinet and can be easily removed.

Cabinets Only—Drawer stops prevent unintentional pull-out. Cabinets are available empty allowing users to chose any drawer configuration. Cabinets can be stacked and bolted together, or bolted to a rigid surface, such as optional base, for added stability. Steel parts are rust and acid resistant.

Extra Drawers—Models with adjustable compartments include plastic dividers that can be removed or rearranged.

Modular Drawer Cabinets and Pigeonhole Bins

DURHAM MFG Est. 1922

- Prime cold-rolled steel, fully-welded construction
- Gray powder-coated finish
- Shipped fully assembled and ready to use

Cabinets and bins of the same width and depth can be stacked for increased storage capacity.

Drawer Cabinets—Drawers have slotted sides in 1" intervals for use with dividers. 2 movable plastic dividers per drawer are included. Vertical supports add strength and rigidity. Stop feature at rear of drawers prevents accidental spilling. Steel drawers have formed steel runners for smooth operation. Extra drawer dividers are available.

Pigeonhole Bins—8½"-deep units feature a hemmed lip to keep parts from spilling out; no sharp edges. Slope bin front on 12"-deep units allows for easier removal of parts.

Pigeonhole Adjustable Bin—5 removable vertical dividers enable the creation of multiple width openings in 3¾" increments. Bin has keyhole slots for wall mounting.

DURHAM MFG Est. 1922

Specialty Storage Units

- All-steel construction
- Gray powder-coated finish, except Nos. 4HU95 and 4HU94 are black.

ROD WIRE RACKS

Removable, plated-steel rods store and dispense spools of wire. Easy-to-assemble units can be counter-, wall-, or vehicle-mounted. Racks accommodate spools up to 10" dia.

LOOP HOSE CLAMP RACKS

Heavy-gauge wire construction for durability. Place on countertops or wall mount. Included sign panel lists clamp diameters.

5-Loop—Accommodates clamps from 2$\frac{1}{16}$" to 5".

10-Loop—Designed to hold clamps ranging in size from the smallest mini-clamp up to 2¾".

WIRE AND TERMINAL STORAGE CABINET

Accommodates 24 3½" spools. Features 16 grommets to guide wires and a compartment box with 21 compartments for storing smaller components.

HYDRAULIC HOSE CABINETS

Heavy-duty all steel construction with a gray powder-coated finish. No. 49H244 is a single hose rack, No. 49H245 is a hose rack with 1 divider, No. 49H246 is a hose rack with 2 dividers.

DURHAM MFG Est. 1922

Rotobin™ Revolving Storage Bins

- More accessibility and visibility than standard shelving
- Shelves rotate independently, even when fully loaded
- Save up to 40% more floor space vs. linear storage
- Gray powder-coated finish
- Easily assembled

FLAT-BOTTOM SHELVES

Shelf compartments can be further divided on 1" centers using dividers that must be ordered separately.

SCOOP-BOTTOM SHELVES

Compartment shape makes it easier to remove bulk parts.

ACCESSORIES FOR REVOLVING STORAGE BINS

Dividers—Bolt in place on 1" centers.

Pans—Removable polypropylene organizers.

Cast-Iron Pipe Fittings and Pipe

GRAINGER APPROVED

PIPE FITTINGS

Galvanized iron pipe fittings have a tensile strength of no more than 50,000 lb. Manufactured per international standards for durability and corrosion resistance. Feature quality set screws with antirust coating. Fittings build with no welding required; pipe cutters and a standard hex tool are usually the only tools needed. Use No. 30LX45 screws for ¾" and 1" pipe sizes, and No. 30LX47 screws for 1¼", 1½", and 2" pipe sizes; order separately on Grainger.com®. Constructed to ASTM Standards.

PIPE

Pipe is welded and hot-dipped galvanized for corrosion resistance. Tensile strength of 30,000 lb. Constructed to ASTM Standards.

Aluminum Slip-On Pipe Fittings and Pipe

Hollaender Your Handrail Source.

- Corrosion-resistant, nonmagnetic, nonsparking

Rugged fittings are as strong as malleable iron, but only ⅓ the weight. The 535 alloy aluminum fittings are suitable for use with aluminum pipe, black iron, galvanized carbon steel, or stainless steel with no electrolytic corrosion. You can easily assemble the railing and structure with just a standard hex key. Innovative set screw design can drastically reduce loosening caused by vibration, and they can resist pull-out and rotational slip. All pipe is anodized aluminum. OSHA, IBC, BOCA, SBC, and UBC Compliant.

Smoker's Shelter
No. 49P403

Smoking Shelter with Aluminum Bench
No. 3CHN8

Smoking Shelters

GA

Galvanized tube construction. Include lag-down plates for secure installation. Ship unassembled.

No. 49P403—PC panels and a PVC sloped roof provide added protection from inclement weather.

No. 49P402—Feature 28-ga. color steel siding and roofs. 42"W clear plastic shield provides protection from the weather and visibility from the outside. A wooden bench on the back panel offers a comfortable place to lean back. Blue powder-coat frames and beige panels.

PORTA-KING

All structural steel smoking shelters ship completely assembled and ready for immediate use. Simply anchor base plates onto existing concrete slab. Feature 11-ga. heavy-duty welded-steel construction. Steel surfaces include a rust-resistant coating. Integral roof structures include self-contained gutters.

GA GRAINGER APPROVED PORTA-KING BUILDING SYSTEMS

Standard Smoking Shelters—Include full-length windows with maintenance-free anodized aluminum frames and 3/16" tempered safety glass to provide 360° visibility.

Smoking Shelters with Aluminum Bench—Include full-length maintenance-free aluminum bench, with back rest, factory-installed onto shelter frame.

Smoking Shelters with Aluminum Bench, Light Fixture, and Exhaust Fan—Include a ceiling mounted 160 cfm exhaust fan with damper/vent and a 64W fluorescent light fixture with weatherproof ballast. Each is prewired in surfaced-mounted conduit to separate wall-mounted switches. Both devices are wired to a surface-mounted junction to facilitate electrical connection from onsite power source.

PORTA-KING BUILDING SYSTEMS

Modular Unassembled In-Plant Offices

- Assembled units are available online, see Grainger.com®

Designed for ease of assembly; can be easily modified at any time. 2- and 3-wall buildings are designed to attach to existing walls, not to each other. Sturdy 3"-thick panel design. Steel/Vinyl covered panels have steel on the outside and vinyl on the inside. Vinyl covered panels feature vinyl on both sides.

ALL OFFICES INCLUDE:

- All wall panels, connecting posts, framing, and hardware
- 1 heavy-duty 20 ga. steel swing door with large vision lite that aesthetically matches posts, wall panels, and framing
- 8-ft.-tall panels with Class A fire rating
- Outlets/switches include boxes and devices; install as needed in connecting posts; no wire included
- For the number of outlets in each model, see Grainger.com®

Note: PE-stamped drawings are not included; call 1-800-GRAINGER (472-4643). Before purchasing, consult your local building department for applicable code requirements. Consult an electrician for all electrical installations.

Assembled Guard Buildings

PORTA-KING BUILDING SYSTEMS

- Non-Ballistic Rated have fully insulated R-10 walls and ceiling; corrosion-resistant anodized aluminum exterior
- Ballistic-Rated have fully insulated R-10 walls and R-19 ceiling; high strength white steel exterior

Buildings ship to site ready for immediate use. Forklift pockets in the baseframe allow buildings to be easily moved.

Include 1 sliding door with window, 1 steel counter, one 115V duplex outlet, one 230V outlet, one 12-circuit breaker box, 1 light with switch (except Nos. 3CHN5 and 3CHN6 have 2 lights with switch), 2 fixed windows, and sliding windows (quantities listed in table).

Top suspended, 1¾"-thick sliding door has laminated hook bolt deadlock with master-key option. 360° glazing provides unobstructed views. Weatherproof surface on exterior roof creates weather tight seal.

Note: Dimensions listed do not include HVAC unit dimensions. Call 1-800-GRAINGER (472-4643) for additional dimensions.

Ballistic-Rated Steel—All-welded steel exterior has Level 3 ballistic-rated glazing and no exposed fasteners; provide a sturdy shelter for security personnel and equipment in more-hazardous areas. Conform to standards for UL752 Level 3 ballistic protection from grade to roof overhang.

Modular In-Plant Offices

PORTAFAB

Painted steel stud framing system uses 3"-thick, 8-ft. tall walls to create a standalone, free-standing structure within a facility.

ALL OFFICES INCLUDE:

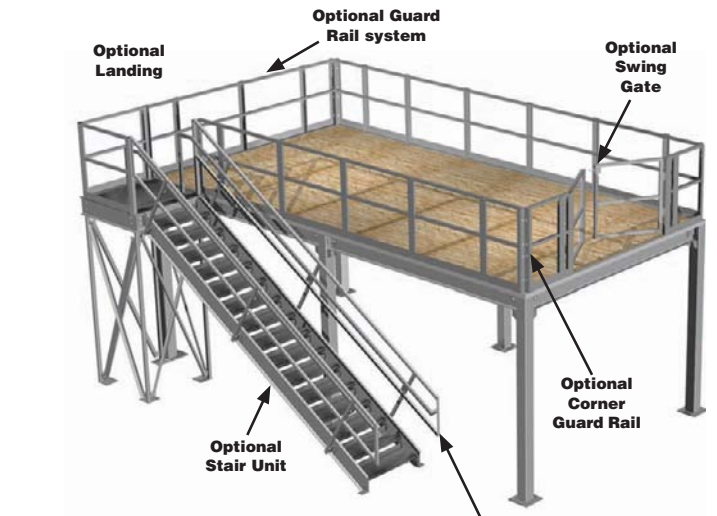
- All wall panels, posts, framing, and hardware
- Corrugated non-load bearing steel roof
- 24" x 48" acoustical ceiling
- 36"W x 84"H x 1¾"-thick, 20-ga. steel door and 18-ga. steel frame with a 24"W x 36"H x ¼"-thick tempered glass window, left-hand swing lever lockset, hinges, sweep, lights, outlets, and switch; no wire included

ACCESSORIES

Air Conditioner Frame—Factory-trimmed 26"W x 15⅝"H opening centered at 60" above finished floor. Painted aluminum.

Optional Fixed Window—¼"-thick tempered safety glass comes preglazed in aluminum window frame.

Optional Swing Door—20-ga., 1¾"-thick steel door with baked enamel finish is prehung in an 18-ga. frame with mortised hinges, sweep, and lever lock.



Standard and Modular Light Fixtures—2-ft. x 4-ft. recessed troffer fluorescent light fixtures with acrylic lenses. T8 bulbs not included.

Standard Duplex Outlet—Includes handy box, 10 ft. of conduit, and coverplate. 2"W x 3"H.

Modular Wiring Kits—Provide your office with everything it needs for simple wiring installation. All outlet boxes, switches, wiring, and conduits fit neatly into the studs of the framing system.

PORTA-KING BUILDING SYSTEMS

Bolt Assembly Mezzanines

Designed for 125 lb./sq.-ft. uniform load, L/360 deflection. Meet IBC building code for seismic design categories A to C. Categories D to F require modifications to standard designs at additional cost. Mezzanines are 110"H to top of deck. Structural steel beams, purlins, and girders with 5" x 5" square columns help create a rigid floor space. Underside has a white finish to enhance light levels. A full perimeter steel fascia conceals the edges of the deck surface. Mezzanines are stand alone structures. Gray polyurethane acrylic enamel painted finish.

High-density composite flooring is highly recommended for structures that need to accommodate heavy pallet jacks, carts, or dollies.

ACCESSORIES

Guardrail—Welded 1-pc. design with kick plate. Can be easily secured to mezzanine deck surface.

Corner Guardrail—Welded 2-pc. design with kick plate.

Swing Gate—Allows for easy relocation within the guardrail system. Includes latch.

Mezzanine Stair Unit (Without Landing)—Stairs are fully welded with closed risers and nonskid treads. Welded, 1-pc. unit has 34" high fully-welded handrail and 42" high guardrail. Meets IBC.

Mezzanine Landing—Freestanding unit can be installed anywhere on the mezzanine and easily moved to another location. Features steel diamond plate finished floor. Includes a guardrail on 2 sides and vertical corner posts that can accept either left- or right-handed stair placement.

Self-Closing, Adjustable Safety Swing Gates

Cotterman

- Width is adjustable in 2" increments
- Universal design for either right- or left-swing
- Friction-reducing bushings eliminate metal-to-metal contact
- Tested to 1,000,000 cycles without spring or hinge failure
- 2-part powder-coated finish,
- zinc-rich primer with UV-resistant polyester top coat

Help facilities meet OSHA and ANSI requirements for mandatory guarding of platform railing system openings. Include hardware for easy installation with no drilling, welding, or cutting. Stainless steel spring won't rust or corrode.

Welded and Woven Wire Mesh Partition Selection Guide

WELDED WIRE MESH PARTITIONS

- Welded wire construction allows the installer to make modifications with relative ease
- Lightweight but strong
- Feature straight lines; steel wires are placed perpendicularly and welded at each intersection, which allows it to maintain its shape when stressed
- Typically has larger openings than woven wire
- Less expensive than woven wire partitions

WOVEN WIRE MESH PARTITIONS

- Woven mesh often requires metal framing or edging to secure the partition panels
- Heavier product
- There are no easy footholds or handholds with woven wire panels
- Has a textured look with steel wires precision-crimped into a diamond shape, which locks them in to place and provides extra-strength

3 Preset Designs Available

How To Order Wire Partitions

1. Make a sketch of proposed enclosure. Label overall dimensions of walls required.

2. What is the height of the material required?

3. Post must be used between panels and doors.

4. Determine the size of door/s (width and height/swing or slide) and locate the door on the drawing.

A.—Which way will the door swing? In or out and either left or right. Please note on the drawing to clarify.

B.—With slide doors, do they slide left or right? Remember if the door has a 3-ft. opening, in the direction the door opens there needs to be a 3-ft. panel and post behind it for support.

5. Multiple panels are required to create desired height of structure (folding guard would require this step).

Example:

A.—Partitioning that is 8-ft. tall requires two 4-ft. tall panels between a set of posts.

B.—Partitioning that is 10-ft. tall requires two 5-ft. tall panels between a set of posts.

OR

Provide a drawing and forward all the information to your Grainger Account Manager and/or your local Grainger branch.

Welded Wire Partition/Fencing Systems and Predesigned Room Kits

FOLDING GUARD®

Shown with 3 Panels, 4 Posts, and 1 Sliding Door

- **Hinged door is available with a 3- or 4-ft. clear-width opening and a 94" clear height**
- **Sliding doors are available with a 4-, 6-, or 8-ft. clear-width opening and 96" clear height**
- **Galvanized finish**
- **Powder-coated doors**

Provide security with an unobstructed view of operation and/or contents. Modular design enables fast installation and easy relocation; more economical than woven wire. Panels trim easily with common wire cutting tools. Panels are 8-ga. (0.162") galvanized wire welded into a 1½" x 3" grid. 1½" bends on the top and bottom add rigidity and provide a mounting point to bolt horizontally stacked panels together (hardware included). Slide door track extends to prior panel post for increased strength. All doors include a cylinder lock with 2 keys. Heavy-duty 14-ga. 2" x 2" posts are welded to 6" x 2" x ¼" predrilled mounting plate. Posts are predrilled for panel attachment (capping channel and hardware included).

FOLDING GUARD®

Woven Wire Partitions and Predesigned Room Kits

Partitions make it easy to create enclosed, lockable areas for securing valuables. Designs can be reconfigured or expanded by adding components. Made of 10-ga. steel wire crimped and woven into 1½" diamond mesh and securely clinched to steel channel framing. Leveling shoes on posts and top capping channels help maintain structural stability. Panels mount 3" from floor and bolt together quickly with included hardware. Doors include cylinder lock with 2 keys. Gray powder coat finish. Roofs, as well as custom sizes, are available; call 1-800-GRAINGER (472-4643) or visit Grainger.com®.

PREDESIGNED WOVEN WIRE ROOM KITS

Convenient, prepackaged kits contain everything needed to put together a specific room design. Include 4-ft. wide x 8-ft. high sliding door with built-in, keyed-different cylinder lock.

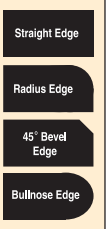
Workbench Top Selection Guide

Steel stringer and fasteners included. Choose from 4 edges and 7 work surfaces.

Steel—Smooth surface will not crack or absorb oil. 12-ga. Gray powder-coated finish.

Shop—Versatile, oil- and moisture-resistant surface. Top and bottom are ⅜" super-hard custom board, sanded and sealed.



Plastic Laminate—Nonconductive surface, ideal for electronics assembly or repair and service of component parts. Melamine-laminated, gray scrim satin finish.

ESD Plastic Laminate—Protect circuit boards and other electronic components from electrostatic discharge. Built-in ground snap for easy connection. Resist stains, oils, and diluted chemicals. Almond finish.

Butcher Block Maple—Resist damage; provides maximum shock absorption. Top-quality, kiln-dried, hardwood maple laminated strips. Oil-rubbed natural finish.

Oak—Nonconductive, impact-resistant solid oak strips laminated together and sanded for a smooth, tough surface. Clear lacquer finish.

Phenolic—Nonconductive with higher resistance to chemicals, stains, abrasions, scratching, and humidity. Black finish.

Butcher Block Top with Single Pedestal

Gray Plastic Laminate Top with Double Pedestal and Riser Shelf

Preconfigured Industrial Workbenches

LISTA

- Drawer capacity: 165 lb., based on evenly distributed loads
- 100% drawer extension
- Back and end stops extend 3" above work surface to retain small items
- Bright blue powder-coated finish

Designed to maximize storage in the work area, while heavy-duty, steel construction provides durability in tough environments. Pedestals have ergonomically designed drawer handles located at the top of the drawer and are flush with pedestal front when drawer is closed for added safety. Drawers include preinstalled partitions with dividers. Pedestals have overall dimensions of 22$^{3}/_{16}$"W x 28½"D x 33½"H and come with a removable core lock for greater security and easy replacement. 2 keys included. Combination drawer/door pedestal features 1 drawer and hinged bottom door section with 1 fixed shelf. Drawer and door lock separately. 4 keys (keyed alike) included. Legs feature sturdy, 1-pc., all-welded construction with bottom hole for leveling glides (included). Feet have anchor holes for floor mounting. Models are also available with 13½"H x 10½"D steel riser shelf with 2"H back stop.

- 1000-lb. capacity, based on evenly distributed loads
- Light beige, powder-coated finish

Workbenches have a sturdy 4-leg design with 4" front, side, and back rails to support the work surface and allow operators to work on all 4 sides. Squared work surfaces allow units to be slid together with no gaps. Modular design allows optional accessories to easily bolt on. See this page for available accessories.

Chem-Guard®—Black chemical-resistant work surface is 1.250" thick.

Stainless Steel—Work surface is 16-ga. with 0.125" radius edges.

Epoxy Resin—Benches are black with 1" eased edges.

Commercial Adjustable-Height Workbenches

Ergonomic steel legs adjust from 28" to 33" in 1" increments to help reduce stress-related injuries. Double electrical knockouts enable electrical service to be wired without cutting holes in frame. Heavy-gauge welded steel frame supports load capacities to 200 lb. per sq. ft., based on evenly distributed loads. 12"-deep steel lower shelf adds lateral support. Shipped unassembled. Workbench drawer attaches to underside of all commercial benches and stock carts with included hardware. Gray powder-coated finish.

Adjustable-Height Steel Cantilever Workbenches

Pro-Line

- Load capacity: 750 lb., based on evenly distributed loads
- 1⅝"-thick steel construction and uprights
- Dark blue powder-coated finish

The modular design allows custom workbench configuration. Nonmarking HDPE glides protect floors and make moving unit easy. Standard Grounding Kit No. 2MXJ3 includes 2 banana jacks and a mounting bracket.

Starter units with add-on units enable workspace customization. Steel frame-supported work surface is pull pin adjustable (independent of frame) from 30" to 36"H. Frames are 65"H.

Starter Units—Include work surface, frame, 2 top supports, and 2 horizontal leg supports.

Add-On Units—Include work surface, frame, 1 top support, and 1 horizontal leg support.

For ESD laminate surfaces; use Standard Optional Ground Kit No. 2MXJ3 and Wrist Strap No. 2WXT8, sold separately, to help protect static-sensitive electronics.

Computer Security Cabinets

Feature separate locking upper and lower compartments. Fit most 19" CRT monitors. Mobile units roll on 5" casters. Powder-coated finish. Vented back.

DESKTOP CABINETS

No. 4KG36—Includes slide-in pocket doors and inner compartments. 25¾"W x 19"D x 22¾"H compartment. Shipped fully assembled.

MOBILE CABINETS

Nos. 462D18—26¾"W x 23¾"D x 11¾"H compartment. 4 fixed shelves. Includes slideout keyboard tray and open printer shelf. Assembly required.

No. 4KG35—2 adjustable shelves in the 22½"W x 23"D x 30"H lower section. 6-outlet power strip has built-in surge protection. Shipped fully assembled.

Nos. 1UG95 and 1UG96—Slide-out keyboard tray can be accessed while top and bottom compartments remain locked. 20¾"W x 21¼"D x 23½"H lower compartment has 1 fixed and 1 adjustable shelf. Locking bottom doors in front and rear for easy access. Acrylic top compartment window for viewing most 20" monitors. Some assembly required.

Nos. 462D22 to 462D24—Each cabinet features 24"W x 9"D x 19¼"H compartment. Include 2 folding wing shelves, an adjustable shelf with ball guide, clear acrylic window, and lock. Assembly required.

STATIONARY

No. 462D19—35"W x 18"D x 41"H desktop. 4-position roll-out printer shelf adjusts to accommodate equipment. Lateral file drawer accommodates hanging files. Roll-out keyboard drawer. 4 fixed shelves. Locking upper compartment with retracting door. Assembly required.

Pegboards and Accessories

Square-Hole Pegboards
- ⅜" square holes spaced on 1½" centers

Round-Hole Pegboards
- 9/32" holes spaced on 1" centers
- Use with lockable peghooks (sold separately) or standard ¼" peghooks
- Simple wall mounting with spacer kit No. 6YB42

Polypropylene Pegboard Panels—Offer an easily washable surface that is ideal for damp and poorly lit areas. Poly boards are higher capacity than wood boards and are more easily contoured to curved surfaces.

Hardwood Pegboard Swing Panels—Increase usable storage with these wall-mounted, two-sided pegboard panels. Steel frame with tempered pegboard panels hold up to 575 lb. per panel. Panels pivot at the wall mounting to allow multiple panels to be mounted side by side and still allow easy access.

Round-Hole Plastic Bin Kits and Shelf Tray—Yellow molded bins include mounting clips. Clips remain securely fastened to the board; bins are removable.

XtraWall® Swinging Pegboard Panels

- Hold a large amount of tools and parts
- Mount multiple panels side-by-side for easy access
- Designed to pivot at the wall mounting

Swing panels increase usable storage with 2-sided accessibility. Each Hardwood unit comes with ¼" perforated and tempered pegboard that attaches to a heavy-duty powder-coated steel frame system. No. 38P190 uses ¼" durable polypropylene pegboard for heavy power and hand tools or large items. Steel pivot wall brackets mount to cement block or wood stud walls. Include wall mounting bracket and hardware. Assembly required.

Pegboard and Bin Storage Trucks

- Overall height: 57"
- 1½" angle iron frame
- 2000 lb. total capacity
- Shipped fully assembled

Transport and organize small parts and tools. Various configurations are available with 16-ga. louvered panels and/or 16-ga. steel pegboard on both sides, opposite sides, or paired on each side. All units have a 12-ga. steel deck 8" above the floor with reinforced channels underneath; 1½" lip on deck keeps parts from falling off. 6" x 2" phenolic casters; 2 rigid and 2 swivel with side brakes. Durable gray powder-coat finish. Pegboard holes are punched on 1" centers and accommodate standard peg hooks (sold separately; see page 1329). Louvered panels accommodate bins (sold separately, see page 1329).

Pegboards

Heavy-duty, scratch-resistant, and epoxy-coated steel pegboard with square holes is ideal for use in clean room, factory floor production, maintenance, repair areas, and garages. Industrial-strength hooks create a very reliable pegboard system. Storage requirements for power tools, and even large and odd shaped tools are easily met using steel pegboards. Kits include assorted tool holder, hook, and/or bin accessories for immediate setup. For full list of kit contents, see Grainger.com®.

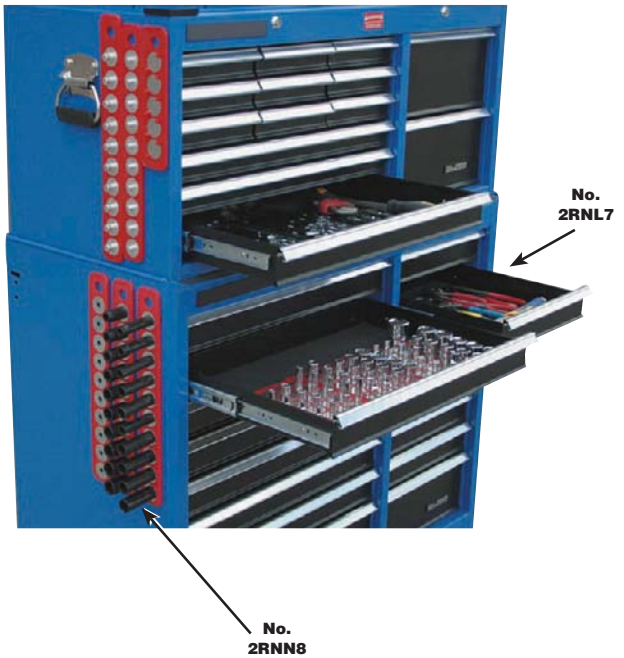
WALL CONTROL



Wall Control® Systems

Pegboards—Versatile pegboards accommodate multiple variations of commercial-grade hooks, brackets, shelves, and magnetic accessories. Easy-to-install toolboards feature a pre-formed framed flange to space panel off of a wall, workbench, tool cart, stud, or any other vertical surface so no additional space is required and no peg hole must be used for mounting. 20-ga. steel construction is fire-, rust-, and corrosion-resistant.

Toolboard Hook Kits and Workstations—Hooks, brackets, and shelves provide secure tool storage on slotted Wall Control® pegboards. All hooks are made from 14-ga. steel with a durable baked-on finish.

Office and Conference Room Furniture

Work surfaces feature a melamine finish that resists scratches and stains. Meet ANSI/BIFMA standards, except Nos. 12U550, 12U551, 12U556, and 12U557.

Prestige+ and Flare Series—Drawers have ball-bearing slides for quiet and smooth operation. Prestige+ Series features durable 1"-thick work surface with melamine finish and 2.5mm PVC edge, a modesty panel, and classic moldings. Each pedestal has 2 utility drawers and 1 file drawer with letter/legal filing system. Flare Series comes with a ¾" decorative rail under the top and silver decorative moldings for an elegant appearance. Pedestal comes with 1 utility drawer and 1 file drawer, while the hutch has a decorative rail under the top and 2 doors.

Legacy Series—Modern design is constructed with 1"-thick melamine laminate with matching 3mm PVC edges. All drawers and doors feature ergonomically designed pulls and include interchangeable locks. File drawers have a 150-lb. weight capacity with full extension, 3-step suspension slides, and hanging rails for letter/legal filing.

Conference Tables—Race track tables have 2"-thick tops and feature power/data ports.

Adjustable Desk Grommet

Flexible Desk Grommet

J Style and Locking-Latch Channels

Self-Adhesive Wall/Desk Wire Clips

Desk Grommets, Wire Clips, and Channels

Problem Solving Products Master Manufacturing Master Caster — Supplier Diversity

Desk Grommets—Adjustable grommets open to 3 different widths. Flexible grommets can receive multiple wires from any direction.

Wall/Desk Wire Clips—Direct wires around corners or angles, keeping them safely off the floor and out of the way.

Channels—Block wires from view and prevent tangling. Self-adhesive backing. Locking-latch channels deter overstuffing; nonlocking ("J"-style) channels are designed for thicker cords.

FireKing®

Fire-Resistant File Cabinets

High-security Medeco® key locks resist picking and drilling. UL Class 350 1-hr. fire rating with impact.

LATERAL AND VERTICAL FILE CABINETS

Fire-resistant insulation is 100% gypsum reinforced by a 1" x 2" lattice of 14-ga. galvanized welded-steel wire. Insulation is placed between each drawer to make each a separate fire-resistant container. Scratch-resistant and environmentally-friendly powder-coated finish. Drawer bodies have high sides for hanging files; no additional frames are required.

Safe-In-A-File vertical file cabinets conceal a 2.4 cu. ft. burglary-resistant safe behind a false-top drawer panel.

STORAGE CABINETS

Accomodate oversized documents, binders, or any other valuable items.

Flat Filing Systems

GA GRAINGER APPROVED

FLAT FILE CABINETS

Organize and protect stored documents such as blueprints and drawings with these heavy-duty welded steel files. Hinged paper weights in drawer fronts and hoods at the rear keep papers from curling. Drawers open smoothly and quietly, while sturdy drawer rails help ensure smooth alignment. Drawer stops help prevent accidental drawer pull-out. Each drawer includes 2 pull handles and chrome label holder. Include field-installed lock kit with 2 keys. Durable powder-coated finish.

BASES

Durable powder-coated finish. Shipped unassembled.

Closed—Raise flat files 4" off the floor to ease access. Support up to 5 stacked file units.

Open—Raise a single file unit 20" off the floor. The lower shelf helps provide extra storage space.

Outdoor Flags

Annin FLAGMAKERS

Made in the USA with embroidered stars and reinforced fray-resistant lock-stitched stripes on the fly end of the flag. 6 x 10-ft. and smaller size flags have brass lock grommets; 8 x 12-ft. and larger flags have roped heading. Nylon flags provide the best UV resistance and fly in the lightest breeze. 2-ply spun polyester flags provide the longest wear and resist high winds. For additional Flags, Flag Poles, and Accessories go to Grainger.com®.

Standard Copy and Printer Paper

Multipurpose Paper—Multipurpose paper can be used in copiers, laser printers, and plain paper fax machines. Its versatility makes it suitable for small business owners sending and processing work orders, invoices, estimates, and receipts.

Laser Paper—Withstands the high-heat process required to fuse powdered ink, or toner, in place via laser printing. Laser paper produces high-quality color images and text on documents such as design proposals, photographs, flyers, and brochures.

Inkjet Paper—Features high surface strength and even porosity to absorb the liquid ink used in inkjet printing processes. Its structure keeps wet ink from spreading and produces crisp lines for high-quality text and images.

TrueBlock®—Totally opaque labels completely cover old labels and markings to allow re-use of mailing tubes, boxes, and more.

WeatherProof™—Durable polyester labels have an extra-strong adhesive that resists the moisture, scuffing, tearing, and smudging that can occur in many harsh environments.

Repositionable—Can be removed and reapplied without damaging the label or envelope. Labels become permanent over time and are guaranteed to not fall off.

EcoFriendly—All label paper and packaging consists of 100% recycled materials using chlorine-free processes that are still 100% recyclable. Soy- and vegetable-based inks are derived from renewable sources.

Easy Peel®—Simply bend the sheet to expose the Pop-up Edge™ for fast peeling.

Permanent—Holds tight to many surfaces for permanent labeling, unless otherwise noted.

Removable—Labels stick, stay, and can be removed cleanly without leaving any residue.

Numbering Stamps

COSCO Officemate OIC

Bands of numbers and special characters can be configured for custom identification. Self-inking numbering stamps automatically apply fresh ink to the stamp after each use, so they can be operated one-handed and don't require separate ink pads. The stamp's housing is made of metal.

Stamp Pads and Ink Refills

COSCO

Pads—Saturated with ink, these felt pads are used with rubber stamps to date and number invoices, or to apply seals to official documents. They are enclosed in resealable cases to prevent ink from drying out. They can be replenished with compatible ink refills.

Refills—Replenish and extend the life of compatible ink pads, self-inking stamps, and pre-inked stamps.

uni PAINT

Permanent Paint Markers

Oil-based valve-action pens make glossy, opaque markings on light or dark surfaces. Fast-drying paint formula resists spreading and running when in contact with water or water-based fluids. Create bright, permanent marks with superior adhesion on surfaces including steel and iron, aluminum, pipes and tubes, plastics, glass, rubber, and ceramic.

Permanent Markers

Felt tips that transfer permanent inks to writing surfaces and building materials. The fast-drying inks are formulated to be waterproof and smear-resistant, making the markers suitable for transferring measurements and cut lines to glass, wood, stone, metal, and some plastics. They can also be used on surfaces that are too moist, oily, or abrasive for pens or pencils.

Gel Pens & Rollerball Pens

- Plastic barrels
- Comfortable cushion grips

Water- and gel-based inks are less viscous than ballpoint inks, offering smoother and bolder writing, but with longer drying time. They are suitable for signing official documents, checks, and work orders.

Shredders Cut Style and Security Level Definitions

Strip-Cut—Shreds paper into strands. This style provides the lowest level of security, and is used for nonsensitive information.

Cross-Cut—Shreds paper both lengthwise and widthwise. These shredders create small pieces rather than strips and are used to shred everyday, nonpersonal paperwork.

Micro-Cut—Cuts paper into tiny bits. These shredders are used for sensitive personal information in law firms, medical practices, and accounting firms.

High-Security—Thoroughly destroys confidential documents. These shredders are for any business that needs to securely dispose of highly sensitive documents.

Security Levels—The higher the assigned security level number, the smaller the shredded pieces will be.

HSM®

High-Security Paper Shredders

These continuous-duty shredders with higher security levels are capable of cutting paper into smaller pieces for additional protection against identify theft and fraud.

Paper Only—Paper-only high-security shredders cross-cut paper into small pieces to prevent exposure of sensitive or confidential data.

Paper and More—These shredders cut paper and other materials into thin, small pieces for protection against identity theft and fraud. They are capable of shredding items such as credit cards, staples, and CDs.

HSM®

CD and Hard Drive Shredders

These continuous-duty shredders offer secure disposal of data storage media, including hard drives, credit cards, CDs, DVDs, floppy disks, USB sticks, and magnetic tapes. They reduce the digital data carriers into small particles, making data re-creation or recovery virtually impossible, and reducing the possibility of identify theft and fraud.

HSM®

Cardboard Shredders

Cut and perforate used cardboard to convert it into packing material. The resulting product is a soft, perforated layer of padding that offers an alternative to air bubble packaging. These continuous-duty shredders reduce waste by allowing users to re-use cardboard boxes that would otherwise be discarded.

Shredder Bags and Oils

Shredder Bags—Clear plastic HSM shredder bags fit inside compatible HSM shredders for containing and disposing of shredded particles. They help to keep work areas clean by eliminating messes caused by dumping shredder bins. Recyclable.

Shredder Oil—Petroleum-based circulating mineral oil is designed specifically for use in machines and resists rust, oxidation, and wear. It reduces friction between parts and helps reduce squeaks and other noises.

Desktop Label Printers

brother at your side

High speed label printers quickly create paper labels for packages, envelopes, file folders, name badges, and postage. Auto cutter allows for printing 1 or multiple labels at time, eliminating wasted label sheets. Permit users to create and print customized labels. Compatible with Windows, Linux and Mac® and integrates with Microsoft Word, Excel, and Outlook. Free download App allows you to design labels with your mobile device when connected to a wireless network. Up to 300 dpi print resolution for crisp text and graphics. Drop-in rolls require no ink or toner.

QL-800—Create easy-peel Black/Red labels with No. 420R61, sold separately on Grainger.com®. Prints up to 93 labels per minute.

QL-1110NWB and QL-1100—Use direct thermal label printing. Automatic crop function lets on-line sellers easily print barcode labels and other product labels from A4/Letter size label sheet templates (Windows only). Prints up to 69 standard labels per minute.

LabelWriter® Printers

DYMO

Print mailing, filing, and media labels from a variety of software programs. Print up to 71 labels per minute. Feature DYMO Label version 8 software to create and print a variety of labels. DYMO Stamps® software (included) allows printing USPS-approved postage. All printers include power supply, USB cable, CD user's guide, quick-start guide, and address labels.

LW450 Turbo—Maximizes efficiency with high-speed label printing.

LW450 Twin Turbo—Labeler can hold 2 label rolls at once for even greater efficiency. Includes stamps.

LW450 Duo—Prints paper and plastic labels: top portion uses white paper label rolls; bottom uses permanent D1 label tape cartridges. Includes stamps and ¾" black on white D1 label cartridge.

LW450 Desktop Mailing Solution—Features a postal scale that weighs package and then prints out a USPS-approved postage label. No commitment or contract required as with traditional postage meters. Labeler comes with DYMO Stamps® software to weigh, address, and print USPS labels for first class, flat rate, Priority Mail®, Express Mail®, postcards, and international mail. Includes stamps.

LW 4XL—Prints labels up to 4.16"W, including 4.1"W x 6.275"L shipping, warehouse, barcode and identification, bulk mailing, and other large-format labels. Thermal printing technology never requires ink or toner.

D1 LabelManager® Printers

DYMO

Create smearproof labels using thermal transfer technology. Use D1 label tape cartridges.

LM160 with QWERTY Keyboard—Computer-style QWERTY keyboard allows fast text entry. Choose from 6 font sizes, 8 text styles, and 4 boxes plus underline, as well as 228 symbols and clip art images. Format with 1-touch smart keys for text size, bold, italic, underline/box, and vertical text. Large LCD display allows you to preview an image of your label.

LM210D Labeler and Kit—Labeler has a large semigraphical display that displays label before printing. Prints 6 font sizes, 7 styles, 8 boxes, and underline. Includes a ½" black-on-white label cartridge. Requires 6 AA batteries or AC adapter No. 5AU10, sold separately on page 372. Kit No. 2RCJ2 comes with a labeler, two ½" black-on-white label cartridges, 6 AA batteries, AC adapter, and carrying case.

LM360D—Prints up to 4 lines of text with choice of 7 font sizes. 1½" x 2¾" display shows 2 lines of label text. Printer comes with lithium-ion battery, AC adapter, and starter label cartridge.

LM500TS with Touch Screen—Create, edit, and format customized labels directly from the full-color touch screen. Choose from 10 fonts, 25 font sizes, and 5 boxes plus underline, 32 text styles, and 325 built-in symbols and clip art images. Create and save user profiles to store settings and data for up to 5 different users. Computer-style keyboard permits fast text entry, while the automatic label cutter speeds cutting.

D1 Label Tape Cartridges—Tape cartridges are 23 ft. long. Durable, polyester-coated labels are scratch and chemical resistant. All cartridges feature easy-peel, split-back tape.

BANKERS BOX®

Storage Boxes

BASIC-DUTY

Designed for inactive files.

Stor/File™—Lid ships attached, then tears off for storage.

MEDIUM-DUTY

Designed for occasional access to files.

Shipping and Storage—Reusable shipping and storage box in 1. Adhesive strip seals for secure transport. Shipping lid tears off, with flip-top storage lid inside.

Stor/File™—FastFold® quick, easy assembly. Nos. 2PWU6 and 2PWU7 have smooth rolled edges to deter paper cuts and add strength. Nos. 2PWU8 and 2PWU9 have reinforced plastic handle.

Stor/File™ DividerBox™—FastFold® quick, easy assembly and multilayer construction with five 5" dividers.

HEAVY-DUTY

Designed for durability and frequent use.

Presto™—Instant setup; simply push corners. Double-bottom, double-end, double-side construction with tear-resistant handholes. No. 2PWT2 has extra reinforcement and ergonomic handholes.

R-Kive®—Multilayered corrugate construction enhances stacking strength. Reinforced handholes resist tearing. FastFold® quick, easy assembly.

R-Kive® DividerBox™—Three 5" dividers keep contents upright and organized. FastFold® quick, easy assembly.

Liberty®—FastFold® quick, easy assembly. Reinforced plastic handle.

BinderBox™—Hold eight 1½" binders, or a variety of binders up to 3". FastFold® setup, tear-resistant hand holes.

Document Displays

Organize, protect, and display reference documents. Durable, powder-coated metal brackets encase wire-reinforced PVC pockets.

Document Wall Displays—Mount to wall, expand desktop displays, or mount to accessories. Include index tabs. No. 1HEP2 features antimicrobial display pockets, for greater workplace health and safety.

Desktop Document Displays—Viewable at a 60° angle on a desktop, or at a 30° angle when wall-mounted. Available in portrait or B-size landscape formats. Include desk base, mounting bracket, display pockets, and index tabs.

Catalog Racks—Hold 1" or 2" sections of bulky manuals at a 45° reading angle. Heavy-gauge steel construction with powder-coated finish.

Display Accessories—For mounting wall displays to other surfaces to keep documents accessible for easy viewing. No. 1HEN2 telescoping desk column mounts to assembly benches or desks. No. 1HEN3 rack/shelf bracket mounts to shelving or pallet racks.

No. 20PJ11

Masking Tape Rolls

- 60-yd./55m rolls
- Crepe paper structured with rough surface and rubber adhesive
- Clean removal
- Withstand specified temperatures up to 30 min.

Selection Guide

Model No.	Min. Perf. Temp.	Max. Perf. Temp.	Tape Color	Applications
High-Temperature				
GA	Not Rated	325°F	Tan	For coatings cured in hot drying ovens. Excellent adhesion and stain resistance on surfaces for functional coatings or paints, even while warm.
Medium-Temperature				
GA	Not Rated	225°F	Tan	For critical paint lines, urethane coatings, rubber molding, weatherstripping, and general-purpose applications.
IPG PG5	50°F	200°F	Tan	
IPG 534	30°F	200°F		Medium-grade flatback tape with low curl is highly conformable for carton sealing and splicing. Can be used with automatic tape heads.
Low-Temperature				
GA	60°F	150°F	Tan	For light-duty bundling, attaching, labeling, and general-purpose applications.
IPG PG500	50°F	140°F	Tan	
GA Flatback	60°F	150°F	Brown	For packaging and splicing.
IPG 539	175°F	175°F	Tan	Best for carton sealing, packaging, silk screening, beaming/leasing, splicing, tabbing, and picture framing.

Specialty Duct Tape

3M Nashua® TAPE PRODUCTS POLYKEN®

Selection Guide

Model No.	Tape Thickness	Perf. Temp.	Applications
All Climate Duct Tape			
Nashua	9.00 mil	40° to 200°F	Indoor/outdoor mending, repair, and securing outdoor tarps and sheeting.
Double-Faced Cloth Tape			
Polyken 105C	11 mil	40° to 200° F	Adheres on both sides for carpet hold-down, hanging polyethylene sheets, and general mounting and holding.
Polyken FastFloor	11 mil	35° to 150° F	For temporary carpet installation in convention and hospitality industries. Mounting and bonding where clean removal is required.
Flexible Duct Tape			
Nashua 557	14.00 mil	40° to 200°F	HVAC specialty tape printed with UL compliance information. Meets UL 181B-FX requirements.
Metallic Duct Tape			
Nashua 365	11.00 mil	40° to 200°F	Repairs any metallic surface or assembly.

Model No.	Tape Thickness	Perf. Temp.	Applications
Military-Grade Duct Tape			
Polyken 231	12.00 mil	40° to 200°F	Highly adhesive with durable waterproof backing. Ideal for packing, sealing, and waterproofing. ASTMD 5486 Type 4 Class 1.
Nuclear-Grade Duct Tape			
Nashua 357N	13.00 mil	40° to 200°F	For use where corrosion is a concern and containment is required. Sealing insulation, color coding, wrapping pipe ends, packaging, and more in power plants and ships. Nashua 357N and Shurtape PC 623 meet NRC and ASME standards.
3M 8979N	12.10 mil	Up to 200°F	
Polyken 226	12.00 mil	40° to 200°F	
Nashua 398N	11.00 mil	40° to 200°F	
UV-Resistant Clean Removal Duct Tape			
3M 8979	12.60 mil	40° to 200°F	Rubber-backed polyethylene film laminated to cloth. Stays on for up to 1 year without deterioration.

Gorilla Tape

Weatherproof, airtight tape is easy to tear by hand. For indoor and outdoor use.

Duct Tape—Double-thick adhesive grips smooth, rough, and uneven surfaces. Withstands moisture, UV rays, and temperature extremes.

Double-Sided Tape—Bonds plastic, metal, wood, glass, brick, ceramic, and stone. No. 45DV48 holds up to 15 lb. on smooth and rough surfaces for easy hanging; No. 49UU23 is an industrial strength double-sided tape with a heavy duty bond. Holds up to 30 pounds. Ideal for indoor and outdoor projects and sticks to smooth and rough surfaces.

Repair Tape—Fix, patch, seal, hold, and protect almost any surface.

Selection Guide

Model No.	Thickness	Perf. Temp.	Applications
Aluminum Foil Tape			
Nashua 322	5.00 mil	40° to 200°F	Tapes joints and seams, sealing out moisture, vapor, and for general repairs. UL 723 Classified.
Polyken 337	3.70 mil	200°F	Protects against moisture and vapor on foil jacket insulation. Seals, patches, and secure insulation for heating, refrigeration systems, and air conditioning. UL 723 requirements.
Polyken 360-17	17.00 mil	20° to 200°F	Seals cracks and seams in gutters and eaves, around chimneys, vent stacks, and repairs gouges in metal panels.
Nashua 361-11	11.00 mil	20° to 200°F	
3M 363	7.30 mil	-65° to 600°F	Heat reflective, high-temperature protective wrap for insulation cables, instruments, or other high temperature applications.
TapeCase	6.80 mil	-60° to 600°F	
Aluminum All Weather Foil Tape			
Nashua 330X	3.50 mil	-35° to 260°F	Tapes joints and seams while sealing out moisture and vapor. Performs well in colder temperatures. UL 723 Classified.
Aluminum Printed Foil Tape			
Nashua 324A	4.80 mil	-20° to 325°F	Sealing and seaming UL listed fiberglass duct board and flexible duct systems. UL 181A-P and UL 181B-FX listed. UL info printed on tape.
Aluminum Extreme Temp. Foil Tape			
3M 438	7.20 mil	-65° to 300°F	Barrier, protector, and thermal conductor applications. Patches tears in skins of aircraft and truck trailers. Acrylic adhesive. Meets UL 723 requirements.
3M 425	4.60 mil	-65° to 300°F	Use over refrigeration coils or to dampen door panel vibration. Repair tears on truck trailers and aircraft. Acrylic adhesive. Meets UL 723 requirements.
3M 431	3.10 mil	-65° to 300°F	General-purpose sealing, holding, splicing, or masking; indoors or out. Acrylic adhesive. Meets UL 723 requirements.
3M 433	3.60 mil	-65° to 600°F	Holding, splicing, patching, or general protection tape. Silicone adhesive. Meets FAR 25.853(a).
Aluminum Extreme Temp. FSK Foil Tape			
Nashua FSK	8.00 mil	30° to 300°F	Use as fiberglass duct wrap where strength is required. UL 723 Classified.
Aluminum Extreme Temp. ASJ Foil Tape			
Nashua 348	8.80 mil	-35° to 260°F	Provides permanent closure system and vapor barrier on ASJ-faced duct and pipe systems. UL 723 Classified.
Aluminum Sound Damping Foil Tape			
3M 2552	15.00 mil	-25° to 175°F	Apply to vibrating panels and support members and almost anywhere plastic or metal contact with materials where damaging vibration can occur.
Lead Foil Tape			
3M 420	6.80 mil	-60° to 225°F	Conformable tape for a variety of application conditions; indoors and out. 3M 420 tapes are linered.
3M 421	6.30 mil	-60° to 225°F	
Copper Shielding Foil Tape (Non-Conductive)			
3M 1194	2.60 mil	Up to 149°F	Electrical bonding, grounding, and EMI shielding. Solderable and resist oxidation and discoloration. Nonconductive acrylic adhesive.
Copper Foil Tape (Non-Conductive)			
TapeCase	3.50 mil	Up to 311°F	
Copper Shielding Foil Tape (Conductive)			
3M 1181	2.60 mil	Up to 200°F	Excellent electrical conductivity, including grounding and EMI shielding. Solderable and resist oxidation and discoloration. Conductive acrylic adhesive.
Copper Foil Tape (Conductive)			
TapeCase	3.50 mil	Up to 311°F	
Stainless Steel Foil Tape			
TapeCase	4.00 mil	-30° to 350°F	Noncorrosive, nonmagnetic tape for use in marine, food processing, and nuclear applications.
Metalized Polypropylene Duct Tape			
Nashua 555	3.10 mil	-40° to 212°F	Class 1 tape for sealing, seaming, and patching bubble reflection insulation materials.
Polyethylene Coated Cloth Duct Tape			
Nashua 555	3.10 mil	-40° to 212°F	Class 1 tape for sealing ducts, air connectors, and dryer vents.
Polypropylene Duct Tape			
GA	3.10 mil	-40° to 185°F	UV resistant polypropylene tape for sealing and securing flexible air ducts and air connectors.

PTFE Abrasion-Resistant Tape

- Tan color
- Performance temp.: up to 500°F

Glass fabric coated with silicone adhesive provides strength and dimensional stability; the PTFE provides a smooth antistick surface. Use in mechanical applications such as heat sealing bars, conveyor belt coverings, and gaskets/seals.

TapeCase SINCE 1972 a 3M Preferred Converter

Cotton Cloth Tape

- 60-yd. rolls
- 10.5-mil thick
- White color
- Performance temp.: up to 200°F

Protects metal and glass surfaces, pipe threads, and sharp metal edges. Use in tying, bundling, holding, and noncritical packaging applications.

VHB™ Double-Sided Foam Tape Rolls and Shapes

VHB™ (Very High Bond) 100% closed-cell tapes form a tight, high-performance seal. Strong enough to replace spot welds, screws, rivets, and liquid adhesives with long-term durability, indoors and out.

Selection Guide

Model No.	Thickness	Tape Color	Tape Tensile Strength	Tape Adhesive Strength†	Applications
Acrylic Foam, Multipurpose Acrylic Adhesive					
RP62	62 mil	Gray	80 lb-in	Not Rated	Bonds to a variety of materials, including metal, plastic, and painted surfaces.
RP45	45 mil	Gray	85 lb-in	Not Rated	
RP32	32 mil	Gray	85 lb-in	288 oz/in	
RP25	25 mil	Gray	90 lb-in	256 oz/in	
RP16	16 mil	Gray	95 lb-in	192 oz/in	
Conformable Foam, Low Temperature Acrylic Adhesive					
4957F	62 mil	Gray	85 lb-in	Not Rated	Bonds cellular phone antennas and toll tags to vehicles. Bonds to metal, glass, and plastics.
4943F	45 mil	Gray	85 lb-in	Not Rated	
Conformable Foam, Modified Acrylic Adhesive					
5952	45 mil	Black	90 lb-in	—	Bonds to many powder-coated paint and medium-to-low energy paints and plastics, as well as metals and glass.
Conformable Foam, Multipurpose Acrylic Adhesive					
4991	90 mil	Gray	70 lb-in	Not Rated	Bonds muntin bars to windows; bonds and seals polycarbonate lenses over LCDs; bonds prepainted metals in truck assembly; mounts vinyl wiring ducts and conduit channels.
4941	45 mil	Gray	85 lb-in	Not Rated	
4936	25 mil	Gray	90 lb-in	272 oz/in	
4926	15 mil	Gray	95 lb-in	224 oz/in	
Firm Foam, General Purpose Acrylic Adhesive					
4959	120 mil	White	75 lb-in	Not Rated	Attach stiffeners in air conditioners, office furniture, and telecommunications equipment. Bonds aluminum skin to steel of vehicles and bonds architectural signs to frames.
4950	45 mil	White	140 lb-in	400 oz/in	
4949	45 mil	Black	140 lb-in	400 oz/in	
4930	25 mil	White	160 lb-in	Not Rated	
4929	25 mil	Black	160 lb-in	Not Rated	
Firm Foam, High Temp. General Purpose Acrylic Adhesive					
4646	25 mil	Gray	85 lb-in	240 oz/in	Use for prepowder-coat paint applications and attaching vinyl trim, bonding vinyl extrusions and prepainted truck and trailer skins. Bonds well to metal substrates.
4611	45 mil	Gray	85 lb-in	288 oz/in	
Firm Foam, Low Surface Energy Acrylic Adhesive					
4952	45 mil	White	80 lb-in	400 oz/in	Bonds powder-painted metal stiffeners to office desks and file cabinets. High-performance synthetic adhesive also bonds to smooth, general-purpose substrates.
Firm Foam, Low Temperature Acrylic Adhesive					
4951	45 mil	White	110 lb-in	288 oz/in	Bonds cellular phone antennas and toll tags to vehicles. Bonds to metal, glass, and plastics.
Solid Foam, General-Purpose Acrylic Adhesive					
4910	40 mil	Clear	100 lb-in	240 oz/in	Seal skylight inner/outer dome, mount backlit translucent signs and edge bond resin-filled glass. Suitable for high-energy substrates.
4905	20 mil	Clear	100 lb-in	192 oz/in	

† Adhesion varies by substrate, time and temperature.

Double-Sided Tape

- Feature pressure-sensitive adhesive on both sides
- For more sizes, go to Grainger.com® and search "Double-Sided Tape".

No. 54EN47

Selection Guide

Model No.	Thickness	Min. Performance Temp.	Max. Performance Temp.	Tape Color	Tape Backing Material	Tape Adhesive Strength*	Applications
TapeCase TC 485	16 and 32 mil	30°F	105°F	Clear	Rubber	700 oz/in	Bonds to fabrics, metals, plastics, and polyethylene sheeting. Also for lightweight insulation panels and kickplates, and lightweight trim. Solvent-free hot-melt rubber resin adhesive.
3M 9087	59 mil	0°F	160°F	White	PVC	142 oz/in	Ideal for metal fabrication, furniture trim, plastic extrusions, indoor/outdoor signs, badge and nameplates, print finishing, and splicing. Modified acrylic adhesive. Good adhesion for both low and high energy substrates. Bonds to wide variety of similar and dissimilar materials.
3M 9579	5 mil	0°F	120°F	White	Kraft Paper	80 oz/in	Bonds to UV coatings, provides temporary holding to metals, wood, plastic, concrete, and linoleum. Also used for splicing rough or coated materials and splicing carpet backing. Rubber adhesive.
3M 410M	5.9 mil	0°F	200°F	Tan	Paper	65 oz/in	Designed for temporary holding while parts are being finished in the milling process. Also used for mounting rubber or photopolymer printing plates to print cylinders, splicing and core starting papers, foils, films, and fabrics, and attaching golf club grips. Rubber adhesive.
3M 444	3.9 mil	0°F	180°F	Clear	Polyester	32 oz/in	Ideal for textured plastics, foam lamination, fabrics, coated papers, and gasket attachment. Medium-firm acrylic adhesive delivers high adhesion form for efficient laminating procedures.
3M 9576	3.9 mil	Not Rated	125°F	Clear	Polypropylene	30 oz/in	Performs well in high-speed applications and is ideal for the printing industry. Acrylic adhesive.
3M 469	1.0 mil	-40°F	200°F	Red	Paper	50 oz/in	For high-speed flying splices on a variety of paper grades and other printing applications that require visibility. Performs well in applications which require high temperature drying ovens.
3M 9420	4 mil	-40°F	150°F	Red	Polyester	25 oz/in	Provides excellent peel and shear strength making it great for rigorous slicing applications and bonding plastic to metals.

** Adhesion varies by substrate, time and temperature.*

Foam Tape

- Black color
- Performance temp.: 0° to 150°F
- TapeCase product manufactured from 3M material

Flexible and weather-resistant, this closed-cell vinyl tape can handle a variety of gasketing, sealing, baffling, cushioning, and insulating applications.

Polyken 3M TapeCase — Construction Seaming, Preservation, and Polyethylene Film Tape

Selection Guide

Model No.	Thickness	Perf. Temp.	Applications
Construction Seaming Tape			
8087	3.00 mil	-40° to 220°F	Polypropylene tape with acrylic adhesive. Resists sunlight and weather up to 4 months. Ideal for seaming, sealing, and repairing of house wrap, sheathing, moisture barriers, and other construction materials.
Preservation Sealing Tape			
481	9.80 mil	Up to 170°F	UV-, stain-, and moisture-resistant polyethylene tape with rubber-resin adhesive leaves no residue upon removal. Ideal for shrink-wrapped sheeting, tarps, and plastic sheeting. Also ideal for outdoor applications and transportation of equipment and marine craft.
No. 54EN32	9.50 mil	Up to 170°F	
4811	9.50 mil	Up to 170°F	
Polyethylene Film Tape			
Polyken 827	8.00 mil	40° to 200°F	UV- and moisture-resistant tape conforms to irregular surfaces. Superior adhesion to PE sheeting and rough surfaces. For seaming, sealing, splicing, label protection, and as boat shrink tape.

Reclosable Fasteners

3M™ Dual Lock™ Interlocking mushroom-shaped stems snap together to provide tensile strength strong enough to replace mechanical fasteners. Acrylic adhesive backing is suitable for outdoor use. Bond to glass, bare metal, sealed wood, vinyl, and polystyrene. Low-profile models are thinner and more flexible.

Adhesive Transfer Tape and Applicator

Rolls of pressure-sensitive adhesive on a special release liner. Bonds thin, flexible materials where gap filling is not needed.

SCOTCH® ATG TAPES

- Applied with Scotch® ATG 700 Applicator

Model 926—Ideal for materials with glossy coatings, for bonding foam insulation, and for difficult-to-bond folders and boxes. Adhesion strength: 100 oz./in.

Model 969—For applications requiring a thicker, tackier adhesive with strong initial adhesion. Adhesion strength: 75 to 100 oz./in.

Model 924—For bonding materials such as metal, glass, wood, paper, and many plastics. Adhesion strength: 25 oz./in.

Model 928—Low-tack adhesive for bonding applications on 1 side and high adhesion on other side for permanent applications. Adhesion strength: 50 oz./in. Frontside, 3 oz./in. Backside.

ATG 700 APPLICATOR

Applies adhesive transfer tape while simultaneously removing and rewinding the liner.

3M™ STANDARD TAPES

- For hand applications only

Model 950—Provide high-strength adhesion for applications that require a thicker, tackier adhesive. Adhesion strength: 75 oz./in.

Model 465—All-purpose tape for bonding materials such as metal and glass. Adhesion strength: 25 to 100 oz./in.

Models 467MP and 468MP—Bonds graphic nameplates and overlays to metal and high surface energy plastics in the aerospace, medical and industrial equipment, automotive, appliance, and electronic markets. Model 467MP adhesion strength: 47 oz./in. Model 468MP adhesion strength: 66 oz./ in.

Handheld and Mountable Carton Sealing Tape Dispensers

- Dispensers accommodate tape with 3"-dia. core

PISTOL

Low Noise—Innovative tape roll loading enables "Low Noise" feature, for use in sensitive work environments.

Heavy-Duty—Innovative core holds rolls up to 250 yd. Dispenser also has an adjustable brake for easy tension control.

CLAM SHELL

Durable, lightweight construction reduces hand fatigue.

RIBBED

Roll-on applicator allows operator to attach, apply, and cut tape with 1 hand. Adjustable brake controls tape unwind and eliminates wrinkling.

MOUNTABLE

Custom-mount on walls, equipment, tables, and to the sides of work stations for easy dispensing.

Security Tape

NovaVision

- Performance temp.: -40° to 160°F

Tape is designed to stop the theft of valuable goods. Once the tape strip is opened or removed, a hidden message alerts the user that contents may have been tampered with. Premium tapes Nos. 38UZ37 and 38UZ38 have full adhesive transfer for a larger bolder tamper message. Offers versatile performance with virtually all surfaces, including shrink wrap film. The No-Rez labels reveal a void message when the label is removed, and leave no sticky residue behind on the applied surface.

Carton Sealing Filament Tape

- 3"-dia. core

GA—Reinforced tape with rubber adhesion has high shear strength and is good for light duty strapping, packaging, and bundling.

IPG®—Fiberglass-reinforced tape provides superior adhesion for light- to medium-load applications.

Scotch® Filament Tape—Scotch® Filament 880 tapes feature polyester yarn filaments with increased abrasion and shock resistance. Scotch® Filament 890MSR has continuous fiberglass yarn filaments for a very high tensile strength.

Scotch® Light Duty Packaging Tape 681—Features high-tack, moisture- and chemical-resistant rubber adhesive.

3M® Filament Tape 8934—General purpose clear fiberglass-reinforced tape features a synthetic rubber resin adhesive.

Tape and Label Dispensers

- For additional Tape and Label Dispensers, see Grainger.com®

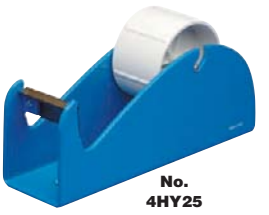
MANUAL

For tape rolls with 3" core. Nos. 11J931 to 11J933 are heavy-duty steel.

AUTOMATIC

Reliable electric models can autocut and dispense tape at specific lengths, reducing waste and improving consistency.

LABEL DISPENSERS



Easily peel and dispense labels or die-cut parts. Automatically rewind liner scrap and remove paper, vinyl, polyester, etc. from its liner for increased productivity.
